HISTORY OF CIVILIZATION IN ENGLAND

VOLUME II

The World's Classics.

1 Charlotte Brontë's JANE EYRE. 3rd Impression.
2 Lamb's ESSAYS OF ELIA. 4th Impression.
3 Tennyson's POEMS, 1830-58. 4th Impression.
4 Goldsmith's VICAR OF WAKEFIELD. 2nd Impression.
5 Hazlitt's TABLE TALK. 3rd Impression.
6 Emerson's ESSAYS. 4th Impression.
7 Keats' POEMS. 3rd Impression.
8 Dickens' OLIVER TWIST. 2nd Impression.
9 THE INGOLDSBY LEGENDS. 3rd Impression.
10 Emily Brontë's WUTHERING HEIGHTS. 2nd Impression.
11 Darwin's ORIGIN OF SPECIES. 3rd Impression.
12 Bunyan's PILGRIM'S PROGRESS, 2nd Impression.
13 ENGLISH SONGS AND BALLADS. Compiled by T. W. H. Crosland. 2nd Impression.
14 Charlotte Brontë's SHIRLEY. 2nd Impression.
15 Hazlitt's SKETCHES AND ESSAYS. 2nd Impression.
16 Herrick's POEMS. 2nd Impression.
17 Defoe's ROBINSON CRUSOE. 2nd Imp.
18 Pope's ILIAD OF HOMER. 2nd Impression.
19 Carlyle's SARTOR RESARTUS. 2nd Impression.
20 Swift's GULLIVER'S TRAVELS. 2nd Impression.
21 Poe's TALES OF MYSTERY AND IMAGINATION. 2nd Impression.
22 White's HISTORY OF SELBORNE. 2nd Impression.
23 De Quincey's OPIUM EATER. 2nd Impression.
24 Bacon's ESSAYS. 2nd Impression.
25 Hazlitt's WINTERSLOW.
26 Hawthorne's SCARLET LETTER. 2nd Impression.
27 Macaulay's LAYS OF ANCIENT ROME.
28 Thackeray's HENRY ESMOND. 2nd Impression.
29 Scott's IVANHOE. 2nd Impression.
30 Emerson's ENGLISH TRAITS. 2nd Impression.
31 George Eliot's MILL ON THE FLOSS. 2nd Impression.
32 SELECTED ENGLISH ESSAYS. Chosen and arranged by W. Peacock. 2nd Impression.
33 Hume's ESSAYS. 2nd Impression.
34 Burns' POEMS. 2nd Impression.
35 Gibbon's ROMAN EMPIRE. Vol. I. Complete in 7 Vols. 2nd Impression.
36 Pope's ODYSSEY OF HOMER.
37 Dryden's VIRGIL.
38 Dickens' TALE OF TWO CITIES. 2nd Impression.
39 Longfellow's POEMS. Vol. I.
40 Sterne's TRISTRAM SHANDY. 2nd Impression.
41 Buckle's HISTORY OF CIVILIZATION. Vol. I. Complete in 3 Vols. 2nd Impression.
42 Chaucer's WORKS. Vol. I. From the Text of Prof. Skeat. Complete in 3 Vols.
43 Machiavelli's THE PRINCE. Translated by Luigi Ricci.
44 Gibbon's ROMAN EMPIRE. Vol. II. 2nd Impression.
45 ENGLISH PROSE. From Mandeville to Ruskin. Chosen and arranged by W. Peacock.
46 ESSAYS AND LETTERS by Leo Tolstoy. Translated by Aylmer Maude. 2nd Impression.
47 Charlotte Brontë's VILLETTE.
48 Buckle's HISTORY OF CIVILIZATION. Vol. II. 2nd Impression.
49 Thomas à Kempis' OF THE IMITATION OF CHRIST.
50 Thackeray's BOOK OF SNOBS.
51 Gibbon's ROMAN EMPIRE. Vol. III.
52 Watts-Dunton's AYLWIN.
53 Buckle's HISTORY OF CIVILIZATION. Vol. III.
54 Adam Smith's WEALTH OF NATIONS. Vol. I. Complete in 2 Vols.
55 Gibbon's ROMAN EMPIRE. Vol. IV.
56 Chaucer's WORKS. Vol. II.
57 Hazlitt's SPIRIT OF THE AGE.
58 Browning's POETICAL WORKS. Vol. I.
59 Adam Smith's WEALTH OF NATIONS. Vol. II.
60 THE MEDITATIONS OF MARCUS AURELIUS.
61 Holmes' AUTOCRAT OF THE BREAKFAST-TABLE.
62 Carlyle's ON HEROES.
63 George Eliot's ADAM BEDE.
64 Gibbon's ROMAN EMPIRE. Vol. V.
65 Montaigne's ESSAYS. Vol. I. Complete in 3 Vols.
66 Borrow's LAVENGRO.

IN PREPARATION.

Gibbon's ROMAN EMPIRE. Vol. VI.
Gibbon's ROMAN EMPIRE. Vol. VII. (with Index).
Montaigne's ESSAYS. Vol. II.
Montaigne's ESSAYS. Vol. III.
Chaucer's WORKS. Vol. III.
&c. &c.

HISTORY

OF

CIVILIZATION IN ENGLAND

CHAPTER I

Outline of the History of the French Intellect from the Middle of the Sixteenth Century to the Accession to Power of Louis XIV.

The consideration of these great changes in the English mind, has led me into a digression, which, so far from being foreign to the design of this Introduction, is absolutely necessary for a right understanding of it. In this, as in many other respects, there is a marked analogy between investigations concerning the structure of society and investigations concerning the human body. Thus, it has been found, that the best way of arriving at a theory of disease is by beginning with the theory of health; and that the foundation of all sound pathology must be first sought in an observation, not of the abnormal, but of the normal functions of life. Just in the same way, it will, I believe, be found, that the best method of arriving at great social truths, is by first investigating those cases in which society has developed itself according to its own laws, and in which the governing powers have least opposed themselves to the spirit of their times.[1] It is on this account that,

[1] The question as to whether the study of normal phenomena should or should not precede the study of abnormal ones, is of the greatest importance: and a neglect of it has introduced

in order to understand the position of France, I have begun by examining the position of England. In order to understand the way in which the diseases of the first country were aggravated by the quackery of ignorant rulers, it was necessary to understand the way in which the health of the second country was preserved by being subjected to smaller interference, and allowed with greater liberty to continue its natural march. With the light, therefore, which we have acquired by a study of the normal condition of the English mind, we can, with the greater ease, now apply our principles to that abnormal condition of French society, by the

confusion into every work I have seen on general or comparative history. For this preliminary being unsettled, there has been no recognized principle of arrangement; and historians, instead of following a scientific method suited to the actual exigencies of our knowledge, have adopted an empirical method suited to their own exigencies; and have given priority to different countries, sometimes according to their size, sometimes according to their antiquity, sometimes according to their geographical position, sometimes according to their wealth, sometimes according to their religion, sometimes according to the brilliancy of their literature, and sometimes according to the facilities which the historian himself possessed for collecting materials. All these are factitious considerations; and, in a philosophic view, it is evident that precedence should be given to countries by the historian solely in reference to the ease with which their history can be generalized; following in this respect the scientific plan of proceeding from the simple to the complex. This leads us to the conclusion, that in the study of Man, as in the study of Nature, the question of priority resolves itself into a question of aberration; and that the more aberrant any people have been, that is to say, the more they have been interfered with, the lower they must be placed in an arrangement of the history of various countries. Coleridge (*Lit. Remains*, vol. i. p. 326, and elsewhere in his works) seems to suppose that the order should be the reverse of what I have stated, and that the laws both of mind and body can be generalized from pathological data. Without wishing to express myself too positively in opposition to so profound a thinker as Coleridge, I cannot help saying that this is contradicted by an immense amount of evidence, and, so far as I am aware, is supported by none. It is contradicted by the fact, that those branches of inquiry which deal with phenomena

operations of which, at the close of the eighteenth century, some of the dearest interests of civilization were imperilled.

In France, a long train of events, which I shall hereafter relate, had, from an early period, given to the clergy a share of power larger than that which they possessed in England. The results of this were for a time decidedly beneficial, inasmuch as the church restrained the lawlessness of a barbarous age, and secured a refuge for the weak and oppressed. But as the French advanced in knowledge, the spiritual authority, which had done so much to curb their passions, began to press heavily upon their genius, and

little affected by foreign causes, have been raised to sciences sooner than those which deal with phenomena greatly affected by foreign causes. The organic world, for example, is more perturbed by the inorganic world, than the inorganic world is perturbed by it. Hence we find that the inorganic sciences have always been cultivated before the organic ones, and at the present moment are far more advanced than they. In the same way, human physiology is older than human pathology; and while the physiology of the vegetable kingdom has been successfully prosecuted since the latter half of the seventeenth century, the pathology of the vegetable kingdom can scarcely be said to exist, since none of its laws have been generalized and no systematic researches, on a large scale, have yet been made into the morbid anatomy of plants. It appears, therefore, that different ages and different sciences bear unconscious testimony to the uselessness of paying much attention to the abnormal, until considerable progress has been made in the study of the normal; and this conclusion might be confirmed by innumerable authorities, who, differing from Coleridge, hold that physiology is the basis of pathology, and that the laws of disease are to be raised, not from the phenomena presented in disease, but from those presented in health; in other words, that pathology should be investigated deductively rather than inductively, and that morbid anatomy and clinical observations may verify the conclusions of science, but can never supply the means of creating the science itself.

Another confirmation of the accuracy of this view, is that pathological investigations of the nervous system, numerous as they have been, have effected scarcely anything; the reason evidently being, that the preliminary knowledge of the normal state is not sufficiently advanced.

impede its movements. That same ecclesiastical power, which to an ignorant age is an unmixed benefit, is to a more enlightened age a serious evil. The proof of this was soon apparent. For when the Reformation broke out, the church had in England been so weakened, that it fell almost at the first assault; its revenues were seized by the crown,[2] and its offices, after being greatly diminished both in authority and in wealth, were bestowed upon new men, who, from the uncertainty of their tenure, and the novelty of their doctrines, lacked that long-established prescription by which the claims of the profession are mainly supported. This, as we have already seen, was the beginning of an uninterrupted progress, in which, at every successive step, the ecclesiastical spirit lost some of its influence. In France, on the other hand, the clergy were so powerful, that they were able to withstand the Reformation, and thus preserve for themselves those exclusive privileges which their English brethren vainly attempted to retain.

This was the beginning of that second marked divergence between French and English civilization,[3] which had its origin, indeed, at a much earlier period, but which now first produced conspicuous results. Both countries had, in their infancy, been greatly benefited by the church, which always showed itself ready to protect the people against the oppressions of the crown and the nobles. But in both countries, as society advanced, there arose a capacity for self-protection; and early in the sixteenth, or probably even in the fifteenth century, it became urgently necessary to diminish that spiritual authority, which, by prejudging the opinions of men, has impeded the march of their knowledge. It is on this account that Protes-

[2] A circumstance which Harris relates with evident delight, and goes out of his way to mention it. *Lives of the Stuarts*, vol. iii. p. 300.

[3] The first divergence arose from the influence of the protective spirit, as I shall endeavour to explain in the next chapter.

tantism, so far from being, as its enemies have called it, an aberration arising from accidental causes, was essentially a normal movement, and was the legitimate expression of the wants of the European intellect. Indeed, the Reformation owed its success, not to a desire of purifying the church, but to a desire of lightening its pressure; and it may be broadly stated, that it was adopted in every civilized country, except in those where preceding events had increased the influence of the ecclesiastical order, either among the people or among their rulers. This was, unhappily, the case with France, where the clergy not only triumphed over the Protestants, but appeared, for a time, to have gained fresh authority by the defeat of such dangerous enemies.

The consequence of all this was, that, in France, everything assumed a more theological aspect than in England. In our country, the ecclesiastical spirit had, by the middle of the sixteenth century, become so feeble, that even intelligent foreigners were struck by the peculiarity.[4] The same nation, which, during the Crusades, had sacrificed innumerable lives in the hope of planting the Christian standard in the heart of Asia,[5] was now almost indifferent to the religion even of its own sovereign. Henry VIII., by his sole will, regulated the national creed, and fixed the formularies

[4] The indifference of the English to theological disputes, and the facility with which they changed their religion, caused many foreigners to censure their fickleness. Perlin, who travelled in England in the middle of the sixteenth century, says, "The people are reprobates, and thorough enemies to good manners and letters; for they don't know whether they belong to God or the devil, which St Paul has reprehended in many people, saying, Be not transported with divers sorts of winds, but be constant and steady to your belief." *Antiquarian Repertory*, vol. iv. p. 511, 4to, 1809.

[5] It is said, that the first tax ever imposed in England on personal property was in 1166, and was for the purpose of crusading. *Sinclair's Hist. of the Revenue*, vol. i. p. 88: "It would not probably have been easily submitted to, had it not been appropriated for so popular a purpose."

of the church, which, if the people had been in earnest, he could not possibly have done; for he had no means of compelling submission; he had no standing army; and even his personal guards were so scanty, that, at any moment, they could have been destroyed by a rising of the warlike apprentices of London.[6] After his death, there came Edward, who, as a Protestant king, undid the work of his father; and, a few years later, there came Mary, who, as a Popish queen, undid the work of her brother; while she, in her turn, was succeeded by Elizabeth, under whom another great alteration was effected in the established faith.[7] Such was the indifference of the people, that these vast changes were accomplished without any serious risk.[8] In France, on the other hand, at the mere name of religion, thousands of men were ready for the field. In England, our civil wars have all been secular; they have been waged, either for a change of dynasty, or for an increase of liberty. But those far more horrible wars, by which, in the sixteenth century, France was desolated, were conducted in the name of Christianity, and even the political struggles of the great families were merged in a deadly contest between Catholics and Protestants.

The effect this difference produced on the intellect of the two countries is very obvious. The English,

[6] Henry VIII. had, at one time, fifty horse-guards, but they, being expensive, were soon given up; and his only protection consisted of "the yeomen of the guard, fifty in number, and the common servants of the king's household." *Hallam's Const. Hist.* vol. i. p. 46. These "yeomen of the guard were raised by Henry VII. in 1485." *Grose's Military Antiquities*, vol. i. p. 167.

[7] Locke, in his First Letter on Toleration, has made some pungent, and, I should suppose, very offensive, observations on these rapid changes. *Locke's Works*, vol. v. p. 27.

[8] But, although Mary easily effected a change of religion, the anti-ecclesiastical spirit was far too strong to allow her to restore to the church its property. "In Mary's reign, accordingly, her parliament, so obsequious in all matters of religion, adhered with a firm grasp to the possession of church lands." *Hallam's Const. Hist.* vol. i. p. 77.

concentrating their abilities upon great secular matters, had, by the close of the sixteenth century, produced a literature which never can perish. But the French, down to that period, had not put forth a single work, the destruction of which would now be a loss to Europe. What makes this contrast the more remarkable is, that in France the civilization, such as it was, had a longer standing; the material resources of the country had been earlier developed; its geographical position made it the centre of European thought; and it had possessed a literature at a time when our ancestors were a mere tribe of wild and ignorant barbarians.

The simple fact is, that this is one of those innumerable instances which teach us that no country can rise to eminence so long as the ecclesiastical power possesses much authority. For, the predominance of the spiritual classes is necessarily accompanied by a corresponding predominance of the topics in which those classes delight. Whenever the ecclesiastical profession is very influential, ecclesiastical literature will be very abundant, and what is called profane literature will be very scanty. Hence it occurred, that the minds of the French, being almost entirely occupied with religious disputes, had no leisure for those great inquiries into which we in England were beginning to enter;[9] and there was, as we shall presently see, an interval of a whole generation between the progress of the French and English intellects, simply because there was about the same interval between the progress of their scepticism. The theological literature, indeed, rapidly increased;[10] but it was not until the seventeenth century that France produced that great secular literature, the counterpart of which was to be found in England before the sixteenth century had come to a close.

[9] Just in the same way, the religious disputes in Alexandria injured the interests of knowledge.

[10] *Monteil, Hist. des divers Etats*, vol. vi. p. 136. Indeed, the theological spirit seized the theatre, and the different sectarians ridiculed each other's principles on the stage.

Such was, in France, the natural consequence of the power of the church being prolonged beyond the period which the exigencies of society required. But while this was the intellectual result, the moral and physical results were still more serious. While the minds of men were thus heated by religious strife, it would have been idle to expect any of those maxims of charity to which theological faction is always a stranger. While the Protestants were murdering the Catholics,[11] and the Catholics murdering the Protestants, it was hardly likely that either sect should feel tolerance for the opinions of its enemy. During the sixteenth century, treaties were occasionally made between the two parties; but they were only made to be immediately broken:[12] and, with the single exception of l'Hôpital, the bare idea of toleration does not seem to have entered the head of any statesman of the age. It was recommended by him; but neither his splendid abilities, nor his unblemished integrity, could make head against the prevailing prejudices, and he eventually retired into private life without effecting any of his noble schemes.

Indeed, in the leading events of this period of French history, the predominance of the theological spirit was painfully shown. It was shown in the universal determination to subordinate political acts to religious opinions. It was shown in the conspiracy of Amboise, and in the conference of Poissy; and still more was it shown in those revolting crimes so natural to superstition, the massacres of Vassy and of St Bartholomew, the murder of Guise by Poltrot, and of Henry III. by

[11] The crimes of the French Protestants, though hardly noticed in *Felice's History of the Protestants of France*, pp. 138-143, were as revolting as those of the Catholics, and quite as numerous relatively to the numbers and power of the two parties.

[12] *Mably, Observations sur l'Hist. de France*, vol. iii. p. 149. In the reign of Charles IX. alone, there were no less than five of these religious wars, each of which was concluded by a treaty.

Clement. These were the legitimate results of the spirit of religious bigotry. They were the results of that accursed spirit, which, whenever it has had the power, has punished even to the death those who dared to differ from it; and which, now that the power has passed away, still continues to dogmatise on the most mysterious subjects, tamper with the most sacred principles of the human heart, and darken with its miserable superstitions those sublime questions that no one should rudely touch, because they are for each according to the measure of his own soul, because they lie in that unknown tract which separates the Finite from the Infinite, and because they are as a secret and individual covenant between Man and his God.

How long these sad days would, in the ordinary course of affairs, have been prolonged in France, is a question which we now perhaps have no means of answering; though there is no doubt that the progress even of empirical knowledge must, according to the process already pointed out, have eventually sufficed to rescue so great a country from her degraded position. Fortunately, however, there now took place, what we must be content to call an accident, but which was the beginning of a most important change. In the year 1589, Henry IV. ascended the throne of France. This great prince, who was far superior to any of the French sovereigns of the sixteenth century,[13] made small account of those theological disputes which his predecessors had thought to be of paramount importance. Before him, the kings of France, animated by the piety natural to the guardians of the church, had exerted all their authority to uphold the interests of the sacred profession. Francis I. said, that if his right hand were a heretic, he would cut it off. Henry II., whose zeal

[13] This, indeed, is not saying much; and far higher praise might be justly bestowed. As to his domestic policy, there can be only one opinion; and M. Flassan speaks in the most favourable terms of his management of foreign affairs. *Flassan, Hist. de la Diplomatie Franç.*, vol. ii. pp. 191, 192, 294-297. vol. iii. p. 243.

was still greater, ordered the judges to proceed against Protestants, and publicly declared that he would "make the extirpation of the heretics his principal business."[14] Charles IX., on the celebrated day of St Bartholomew, attempted to relieve the church by destroying them at a single blow. Henry III. promised to "oppose heresy even at the risk of his life;" for he said "he could not find a prouder grave than amidst the ruins of heresy."[15]

These were the opinions expressed, in the sixteenth century, by the heads of the oldest monarchy in Europe. But with such feelings, the powerful intellect of Henry IV. had not the slightest sympathy. To suit the shifting politics of his age, he had already changed his religion twice; and he did not hesitate to change it a third time, when he found that by doing so he could ensure tranquillity to his country. As he had displayed such indifference about his own creed, he could not with decency show much bigotry about the creed of his subjects. We find, accordingly, that he was the author of the first public act of toleration which any government promulgated in France since Christianity had been the religion of the country. Only five years after he had solemnly abjured Protestantism, he published the celebrated Edict of Nantes,[16] by which, for the first time, a Catholic government granted to heretics a fair share of civil and religious rights. This was, unquestionably, the most important event that had yet occurred in the history of French civilisation. If it is considered by itself, it is merely an evidence of the

[14] M. Ranke (*Civil Wars in France*, vol. i. pp. 240, 241) says, that he issued a circular "addressed to the parliaments and to the judicial tribunals, in which they were urged to proceed against the Lutherans with the greatest severity, and the judges informed that they would be held responsible, should they neglect these orders; and in which he declared plainly, that as soon as the peace with Spain was concluded, he was determined to make the extirpation of the heretics his principal business."

[15] He said this to the Estates of Blois in 1588.

[16] The Edict of Nantes was in 1598; the abjuration in 1593.

enlightened principles of the king; but when we look at its general success, and at the cessation of religious war which followed it, we cannot fail to perceive that it was part of a vast movement, in which the people themselves participated. Those who recognise the truth of the principles I have laboured to establish, will expect that this great step towards religious liberty was accompanied by that spirit of scepticism, in the absence of which toleration has always been unknown. And that this was actually the case, may be easily proved by an examination of the transitionary state which France began to enter towards the end of the sixteenth century.

The writings of Rabelais are often considered to afford the first instance of religious scepticism in the French language. But, after a tolerably intimate acquaintance with the works of this remarkable man, I have found nothing to justify such an opinion. He certainly treats the clergy with great disrespect, and takes every opportunity of covering them with ridicule. His attacks, however, are always made upon their personal vices, and not upon that narrow and intolerant spirit to which those vices were chiefly to be ascribed. In not a single instance does he show anything like consistent scepticism;[17] nor does he appear to be aware that the disgraceful lives of the French clergy were but the inevitable consequence of a system, which, corrupt as it was, still possessed every appearance of strength and vitality. Indeed, the immense popularity which he enjoyed is, almost of itself, a decisive consideration;

[17] His joke on the strength of Samson (*Œuvres de Rabelais*, vol. ii. pp. 29, 30), and his ridicule of one of the Mosaic laws (vol. iii. p. 34), are so unconnected with other parts of his work, as to have no appearance of belonging to a general scheme. The commentators, who find a hidden meaning in every author they annotate, have represented Rabelais as aiming at the highest objects, and seeking to effect the most extensive social and religious reforms. This I greatly doubt, at all events I have seen no proof of it; and I cannot help thinking that Rabelais owes a large share of his reputation to the obscurity of his language.

since no one, who is well informed as to the condition of the French early in the sixteenth century, will believe it possible that a people, so sunk in superstition, should delight in a writer by whom superstition is constantly attacked.

But the extension of experience, and the consequent increase of knowledge, were preparing the way for a great change in the French intellect. The process, which had just taken place in England, was now beginning to take place in France; and in both countries the order of events was precisely the same. The spirit of doubt, hitherto confined to an occasional solitary thinker, gradually assumed a bolder form: first it found a vent in the national literature, and then it influenced the conduct of practical statesmen. That there was, in France, an intimate connection between scepticism and toleration, is proved, not only by those general arguments which make us infer that such connection must always exist, but also by the circumstance, that only a few years before the promulgation of the Edict of Nantes, there appeared the first systematic sceptic who wrote in the French language. The Essays of Montaigne were published in 1588,[18] and form an epoch, not only in the literature, but also in the civilisation of France. Putting aside personal peculiarities, which have less weight than is commonly supposed, it will be found, that the difference between Rabelais and Montaigne is a measure of the difference between 1545[19] and 1588, and that it, in some degree, corresponds with the relation I have indicated between Jewel and Hooker, and between Hooker and Chillingworth. For, the law which governs all these relations, is the law of a progressive scepticism. What Rabelais was to the supporters of theology, that was Montaigne to the theology itself. The writings of Rabelais were

[18] The two first books in 1580; the third in 1588, with additions to the first two.

[19] The first impression of the *Pantagruel* of Rabelais has no date on the title-page; but it is known that the third book was first printed in 1545, and the fourth book in 1546.

only directed against the clergy; but the writings of Montaigne were directed against the system of which the clergy were the offspring.[20] Under the guise of a mere man of the world, expressing natural thoughts in common language, Montaigne concealed a spirit of lofty and audacious inquiry. Although he lacked that comprehensiveness which is the highest form of genius, he possessed other qualities essential to a great mind. He was very cautious, and yet he was very bold. He was cautious, since he would not believe strange things because they had been handed down by his forefathers; and he was bold, since he was undaunted by the reproaches with which the ignorant, who love to dogmatize, always cover those whose knowledge makes them ready to doubt. These peculiarities would, in any age, have made Montaigne a useful man: in the sixteenth century they made him an important one. At the same time, his easy and amusing style,[21] increased the circulation of his works, and

[20] Mr Hallam (*Lit. of Europe*, vol. ii. p. 29) says, that his scepticism "is not displayed in religion." But if we use the word "religion" in its ordinary sense, as connected with dogma, it is evident, from Montaigne's language, that he was a sceptic, and an unflinching one too. Indeed, he goes so far as to say that all religious opinions are the result of custom: "Comme de vray nous n'avons aultre mire de la vérité et de la raison, que l'exemple et idée des opinions et usances du païs où nous sommes: *là est tousiours la parfaicte religion*, la parfaicte police, parfaict et accomply usage de toutes choses," *Essais de Montaigne*, p. 121, livre i. chap. xxx. As a natural consequence, he lays down that religious error is not criminal, p. 53. The fact seems to be, that Montaigne, while recognizing abstractedly the existence of religious truths, doubted our capacity for knowing them; that is to say, he doubted if, out of the immense number of religious opinions, there were any means of ascertaining which were accurate. His observations on miracles illustrate the character of his mind; and what he says on prophetic visions is quoted and confirmed by Pinel, in his profound work, *Aliénation Mentale*, p. 256.

[21] Dugald Stewart, whose turn of mind was very different from that of Montaigne, calls him "this most amusing author." *Stewart's Philos. of the Mind*, vol. i. p. 468.

thus contributed to popularise those opinions which he ventured to recommend for general adoption.

This, then, is the first open declaration of that scepticism, which towards the end of the sixteenth century, publicly appeared in France. During nearly three generations, it continued its course with a constantly increasing activity, and developed itself in a manner similar to that which took place in England. It will not be necessary to follow all the steps of this great process; but I will endeavour to trace those which, by their prominence, seem to be the most important.

A few years after the appearance of the Essays of Montaigne, there was published in France a work, which, though now little read, possessed in the seventeenth century a reputation of the highest order. This was the celebrated *Treatise on Wisdom*, by Charron, in which we find, for the first time, an attempt made in a modern language to construct a system of morals without the aid of theology. What rendered this book, in some respects, even more formidable than Montaigne's was the air of gravity with which it was written. Charron was evidently deeply impressed with the importance of the task he had undertaken, and he is honourably distinguished from his contemporaries, by a remarkable purity both of language and of sentiment. His work is almost the only one of that age in which nothing can be found to offend the chastest ears. Although he borrowed from Montaigne innumerable illustrations,[22] he has carefully omitted those indecencies into which that otherwise charming writer was often betrayed. Besides this, there is about the work of Charron a systematic completeness which never fails to attract attention. In originality, he was, in some

[22] The obligations of Charron to Montaigne were very considerable, but are stated too strongly by many writers. On the most important subjects, Charron was a bolder and deeper thinker than Montaigne; though he is now so little read, that the only tolerably complete account I have seen of his system is in *Tennemann, Gesch. der Philosophie*, vol. ix. pp. 458-487.

respects, inferior to Montaigne; but he had the advantage of coming after him, and there can be no doubt that he rose to an elevation which, to Montaigne, would have been inaccessible. Taking his stand, as it were, on the summit of knowledge, he boldly attempts to enumerate the elements of wisdom, and the conditions under which those elements will work. In the scheme which he thus constructs, he entirely omits theological dogmas; and he treats with undissembled scorn many of those conclusions which the people had hitherto universally received. He reminds his countrymen that their religion is the accidental result of their birth and education, and that if they had been born in a Mohammedan country, they would have been as firm believers in Mohammedanism as they then were in Christianity. From this consideration, he insists on the absurdity of their troubling themselves about the variety of creeds, seeing that such variety is the result of circumstances over which they have no control. Also it is to be observed, that each of these different religions declares itself to be the true one; and all of them are equally based upon supernatural pretensions, such as mysteries, miracles, prophets, and the like. It is because men forget these things that they are the slaves of that confidence which is the great obstacle to all real knowledge, and which can only be removed by taking such a large and comprehensive view, as will show us how all nations cling with equal zeal to the tenets in which they have been educated.[23] And, says Charron, if we look a little deeper we shall see that each of the great religions is built upon that which preceded it. Thus, the religion of the Jews is founded upon that of the Egyptians; Christianity is the result of Judaism; and, from these two last, there has naturally sprung Mohammedanism. We, therefore, adds this great

[23] Hence he opposes proselytism, and takes up the philosophic ground, that religious opinions, being governed by undeviating laws, owe their variations to variations in their antecedents, and are always, if left to themselves, suited to the existing state of things.

writer, should rise above the pretensions of hostile sects, and, without being terrified by the fear of future punishment, or allured by the hope of future happiness, we should be content with such practical religion as consists in performing the duties of life; and, uncontrolled by the dogmas of any particular creed, we should strive to make the soul retire inward upon itself, and by the efforts of its own contemplation, admire the ineffable grandeur of the Being of beings, the supreme cause of all created things.

Such were the sentiments which, in the year 1601, were for the first time laid before the French people in their own mother-tongue.[24] The sceptical and secular spirit, of which they were the representatives, continued to increase; and, as the seventeenth century advanced, the decline of fanaticism, so far from being confined to a few isolated thinkers, gradually became common even among ordinary politicians.[25] The clergy, sensible of the danger, wished the government to check the progress of inquiry;[26] and the pope himself, in a formal remonstrance with Henry, urged him to remedy the evil, by prosecuting the heretics, from whom he thought all the mischief had originally proceeded. But this the king steadily refused. He saw the immense advantages that would arise, if he could weaken the ecclesiastical power by balancing the two sects against each other; and therefore, though he was a Catholic, his policy rather leaned in favour of the Protestants, as being the weaker party. He granted sums of money towards the support of their ministers and the repair of their churches; he banished the

[24] The first edition of *La Sagesse* was published at Bordeaux in 1601. Two editions were subsequently published in Paris in 1604 and 1607.

[25] Sismondi (*Hist. des Français*, vol. xxii. p. 86) and Lavallée (*Hist. des Français*, vol. iii. p. 84) have noticed the diminution of religious zeal early in the seventeenth century; and some curious evidence will also be found in the correspondence of Duplessis Mornay.

[26] The Sarbonne went so far as to condemn Charron's great work, but could not succeed in having it prohibited.

Jesuits, who were their most dangerous enemies ;[27] and he always had with him two representatives of the reformed church, whose business it was to inform him of any infraction of those edicts which he had issued in favour of their religion.

Thus it was, that in France, as well as in England, toleration was preceded by scepticism ; and thus it was, that out of this scepticism there arose the humane and enlightened measures of Henry IV. The great prince, by whom these things were effected, unhappily fell a victim to that fanatical spirit which he had done much to curb ; but the circumstances which occurred after his death, showed how great an impetus had been given to the age.

On the murder of Henry IV., in 1610, the government fell into the hands of the Queen, who administered it during the minority of her son, Louis XIII. And it is a remarkable evidence of the direction which the mind was now taking, that she, though a weak and bigoted woman, refrained from those persecutions which, only one generation before, had been considered a necessary proof of religious sincerity. That, indeed, must have been a movement of no common energy, which could force toleration, early in the seventeenth century, upon a princess of the house of Medici, an ignorant and superstitious Catholic, who had been educated in the midst of her priests, and had been accustomed to look for their applause as the highest object of earthly ambition.

Yet this was what actually occurred. The queen continued the ministers of Henry IV., and announced, that in every thing she would follow his example. Her first public act was, a declaration, that the Edict of Nantes should be inviolably preserved ; for, she says,

[27] Henry IV. banished the Jesuits in 1594 ; but they were allowed, later in his reign, to make fresh settlements in France. But there can be little doubt that they owed their recall to the dread entertained of their intrigues (*Grégoire, Hist. des Confesseurs*, p. 316) ; and Henry evidently disliked, as well as feared, them.

"experience has taught our predecessors, that violence, so far from inducing men to return to the Catholic church, prevents them from doing so." Indeed, so anxious was she upon this point, that when Louis, in 1614, attained his nominal majority, the first act of his government was another confirmation of the Edict of Nantes. And, in 1615, she caused the king, who still remained under her tutelage, to issue a declaration, by which all preceding measures in favour of the Protestants were publicly confirmed. In the same spirit, she, in 1611, wished to raise to the presidency of parliament the celebrated De Thou; and it was only by making a formal announcement of his heresy, that the pope succeeded in frustrating what he considered an impious design.

The turn which things were now taking caused no little alarm to the friends of the hierarchy. The most zealous churchmen loudly censured the policy of the queen; and a great historian has observed, that when, during the reign of Louis XIII., such alarm was caused in Europe by the active encroachments of the ecclesiastical power, France was the first country that ventured to oppose them. The nuncio openly complained to the queen of her conduct in favouring heretics; and he anxiously desired that those Protestant works should be suppressed, by which the consciences of true believers were greatly scandalized. But these, and similar representations, were no longer listened to with the respect they would formerly have received; and the affairs of the country continued to be administered with those purely temporal views, on which the measures of Henry IV. had been avowedly based.

Such was now the policy of the government of France; a government which, not many years before, had considered it the great duty of a sovereign to punish heretics and extirpate heresy. That this continued improvement was merely the result of the general intellectual development is evident, not only from its success, but also from the character of the queen-regent and the king. No one who has read the contemporary memoirs, can deny that Mary de Medici

and Louis XIII. were as superstitious as any of their predecessors; and it is, therefore, evident, that this disregard of theological prejudices was due, not to their own personal merits, but to the advancing knowledge of the country, and to the pressure of an age which, in the rapidity of its progress, hurried along those who believed themselves to be its rulers.

But these considerations, weighty as they are, will only slightly diminish the merit of that remarkable man, who now appeared on the stage of public affairs. During the last eighteen years of the reign of Louis XIII., France was entirely governed by Richelieu, one of that extremely small class of statesmen to whom it is given to impress their own character on the destiny of their country. This great ruler has, in his knowledge of the political art, probably never been surpassed, except by that prodigy of genius who, in our time, troubled the fortunes of Europe. But, in one important point of view, Richelieu was superior to Napoleon. The life of Napoleon was a constant effort to oppress the liberties of mankind; and his unrivalled capacity exhausted its resources in struggling against the tendencies of a great age. Richelieu, too, was a despot; but his despotism took a nobler turn. He displayed, what Napoleon never possessed, a just appreciation of the spirit of his own time. In one great point, indeed, he failed. His attempts to destroy the power of the French nobility were altogether futile;[28] for, owing to a long course of events, the

[28] The common opinion, put forth in *Alison's Hist. of Europe*, vol. i. pp. 101-104, and in many other books, is, that Richelieu did destroy their influence; but this error arises from confusing political influence with social influence. What is termed the political power of a class, is merely the symptom and manifestation of its real power; and it is no use to attack the first, unless you can also weaken the second. The real power of the nobles was social, and that neither Richelieu nor Louis XIV. could impair; and it remained intact until the middle of the eighteenth century, when the intellect of France rebelled against it, overthrew it, and finally effected the French Revolution.

authority of that insolent class was so deeply rooted in the popular mind, that the labours of another century were required to efface its ancient influence. But, though Richelieu could not diminish the social and moral weight of the French nobles, he curtailed their political privileges; and he chastised their crimes with a severity which, for a time at least, repressed their former license.[29] So little, however, can even the ablest statesman effect, unless he is seconded by the general temper of the age in which he lives, that these checks, rude as they were, produced no permanent result. After his death, the French nobles, as we shall presently see, quickly rallied; and, in the wars of the Fronde, debased that great struggle into a mere contest of rival families. Nor was it until the close of the eighteenth century, that France was finally relieved from the overweening influence of that powerful class, whose selfishness had long retarded the progress of civilisation, by retaining the people in a thraldom, from the remote effects of which they have not yet fully recovered.

Although in this respect Richelieu failed in achieving his designs, he in other matters met with signal success. This was owing to the fact, that his large and comprehensive views harmonised with that sceptical tendency, of which I have just given some account. For this remarkable man, though he was a bishop and a cardinal, never for a moment allowed the claims of his profession to make him forego the superior claims of his country. He knew, what is too often forgotten, that the governor of a people should measure affairs solely by a political standard, and should pay no regard

[29] Richelieu appears to have formed the design of humbling the nobles, at least as early as 1624. See a characteristic passage in his *Mémoires*, vol. ii. p. 340. In *Swinburne's Courts of Europe*, vol. ii. pp. 63-65, there is a curious traditional anecdote, which, though probably false, shows, at all events, the fear and hatred with which the French nobles regarded the memory of Richelieu more than a century after his death.

to the pretensions of any sect, or the propagation of any opinions, except in reference to the present and practical welfare of men. The consequence was, that, during his administration, there was seen the marvellous spectacle of supreme authority wielded by a priest, who took no pains to increase the power of the spiritual classes. Indeed, so far from this, he often treated them with what was then considered unexampled rigour. The royal confessors, on account of the importance of their functions, had always been regarded with a certain veneration; they were supposed to be men of unspotted piety; they had hitherto possessed immense influence, and even the most powerful statesman had thought it advisable to show them the deference due to their exalted position.[30] Richelieu, however, was too familiar with the arts of his profession, to feel much respect for these keepers of the consciences of kings. Caussin, the confessor of Louis XIII., had, it seems, followed the example of his predecessors, and endeavoured to instil his own views of policy into the mind of the royal penitent.[31] But Richelieu, so soon as he heard of this, dismissed him from office, and sent him into exile; for he contemptuously says, "the little father Caussin" should not interfere in matters of government, since he is one of those "who have always been brought up in the innocence of a religious life." Caussin was succeeded by the celebrated Sirmond; but Richelieu

[30] Many of the French kings had a strong natural affection for monks; but the most singular instance I have found of this sort of love is mentioned by no less a man than De Thou, respecting Henry III.

[31] The fullest account of Caussin is in *Le Vassor, Hist. de Louis XIII.*, vol. ix. pp. 287-299; to which, however, Grégoire never refers. As I shall have frequent occasion to quote Le Vassor, I may observe, that he is far more accurate than is generally supposed, and that he has been very unfairly treated by the majority of French writers, among whom he is unpopular, on account of his constant attacks on Louis XIV. Sismondi (*Hist. des Français*, vol. xxii. pp. 188, 189) speaks highly of his *Hist. of Louis XIII.*; and so far as my own reading extends, I can confirm his favourable opinion.

would not allow the new confessor to begin his duties until he had solemnly promised never to interfere in state affairs.

On another occasion of much more importance, Richelieu displayed a similar spirit. The French clergy were then possessed of enormous wealth; and as they enjoyed the privilege of taxing themselves, they were careful not to make what they considered unnecessary contributions towards defraying the expenses of the state. They had cheerfully advanced money to carry on war against the Protestants, because they believed it to be their duty to assist in the extirpation of heresy. But they saw no reason why their revenues should be wasted in effecting mere temporal benefits; they considered themselves as the guardians of funds set apart for spiritual purposes, and they thought it impious that wealth consecrated by the piety of their ancestors should fall into the profane hands of secular statesmen. Richelieu, who looked on these scruples as the artifices of interested men, had taken a very different view of the relation which the clergy bore to the country. So far from thinking that the interests of the church were superior to those of the state, he laid it down as a maxim of policy, that "the reputation of the state was the first consideration." With such fearlessness did he carry out this principle, that having convoked at Mantes a great assembly of the clergy, he compelled them to aid the government by an extraordinary supply of 6,000,000 francs; and finding that some of the highest dignitaries had expressed their discontent at so unusual a step, he laid hands on them also, and, to the amazement of the church, sent into exile not only four of the bishops, but likewise the two archbishops of Toulouse and of Sens.

If these things had been done fifty years earlier, they would most assuredly have proved fatal to the minister who dared to attempt them. But Richelieu, in these and similar measures, was aided by the spirit of an age which was beginning to despise its ancient masters. For this general tendency was now becoming apparent,

not only in literature and in politics, but even in the proceedings of the ordinary tribunals. The nuncio indignantly complained of the hostility displayed against ecclesiastics by the French judges; and he said that, among other shameful things, some clergymen had been hung, without being first deprived of their spiritual character. On other occasions, the increasing contempt showed itself in a way well suited to the coarseness of the prevailing manners. Sourdis, the Archbishop of Bordeaux, was twice ignominiously beaten; once by the Duke d'Epernon, and afterwards by the Maréchal de Vitry. Nor did Richelieu, who usually treated the nobles with such severity, seem anxious to punish this gross outrage. Indeed, the archbishop not only received no sympathy, but, a few years later, was peremptorily ordered by Richelieu to retire to his own diocese; such, however, was his alarm at the state of affairs, that he fled to Carpentras, and put himself under the protection of the pope. This happened in 1641; and nine years earlier, the church had incurred a still greater scandal. For in 1632, serious disturbances having arisen in Languedoc, Richelieu did not fear to meet the difficulty by depriving some of the Bishops, and seizing the temporalities of the others.[32]

The indignation of the clergy may be easily imagined. Such repeated injuries, even if they had proceeded from a layman, would have been hard to endure; but they were rendered doubly bitter by being the work of one of themselves—one who had been nurtured in the profession against which he turned. This it was which aggravated the offence, because it seemed to be adding treachery to insult. It was not a war from without, but it was a treason from within. It was a bishop who humbled the episcopacy, and a cardinal who affronted

[32] The Protestants were greatly delighted at the punishment of the bishops of Alby and Nimes, which "les ministres regardoient comme une vengeance divine." *Benoist, Hist. de l'Edit de Nantes*, vol. ii. pp. 528, 529.

the church.[33] Such, however, was the general temper of men, that the clergy did not venture to strike an open blow; but, by means of their partisans, they scattered the most odious libels against the great minister. They said that he was unchaste, that he was guilty of open debauchery, and that he held incestuous commerce with his own niece.[34] They declared that he had no religion; that he was only a Catholic in name; that he was the pontiff of the Huguenots; that he was the patriarch of atheists; and, what was worse than all, they even accused him of wishing to establish a schism in the French church. Happily, the time was now passing away in which the national mind could be moved by such artifices as these. Still, the charges are worth recording, because they illustrate the tendency of public affairs, and the bitterness with which the spiritual classes saw the reins of power falling from their hands. Indeed, all this was so manifest that in the last civil war raised against Richelieu, only two years before his death, the insurgents stated in their proclamation that one of their objects was to revive the respect with which the clergy and nobles had formerly been treated.

The more we study the career of Richelieu, the more prominent does this antagonism become. Every thing proves that he was conscious of a great struggle going on between the old ecclesiastical scheme of government and the new secular scheme; and that he was determined to put down the old plan and uphold the new one. For, not only in his domestic administration, but also in his foreign policy, do we find the same unprecedented disregard of theological interests. The House of Austria, particularly its Spanish branch, had

[33] In a short account of Richelieu, which was published immediately after his death, the writer indignantly says, that "being a cardinal, he afflicted the church."

[34] This scandalous charge in regard to his niece was a favourite one with the clergy; and among many other instances, the accusation was brought by the Cardinal de Valençay in the grossest manner.

long been respected by all pious men as the faithful ally of the church: it was looked upon as the scourge of heresy; and its proceedings against the heretics had won for it a great name in ecclesiastical history.[35] When, therefore, the French government, in the reign of Charles IX., made a deliberate attempt to destroy the Protestants, France naturally established an intimate connection with Spain as well as with Rome; and these three great powers were firmly united, not by a community of temporal interests, but by the force of a religious compact. This theological confederacy was afterwards broken up by the personal character of Henry IV., and by the growing indifference of the age; but during the minority of Louis XIII., the queen-regent had in some degree renewed it, and had attempted to revive the superstitious prejudices upon which it was based. In all her feelings, she was a zealous Catholic; she was warmly attached to Spain; and she succeeded in marrying her son, the young king, to a Spanish princess, and her daughter to a Spanish prince.[36]

It might have been expected that when Richelieu, a great dignitary of the Romish Church, was placed at the head of affairs, he would have re-established a connection so eagerly desired by the profession to which he belonged.[37] But his conduct was not regulated by such views as these. His object was, not to favour the opinions of a sect, but to promote the interests of a nation. His treaties, his diplomacy, and the schemes of his foreign alliances, were all directed, not against the enemies of the church, but against the enemies of France. By erecting this new standard of action,

[35] Late in the sixteenth century, "fils aîné de l'église" was the recognized and well-merited title of the kings of Spain. *De Thou, Hist. Univ.*, vol. xi. p. 280.

[36] This was, in her opinion, a master-stroke of policy.

[37] So late as 1656, the French clergy wished "to hasten a peace with Spain, and to curb the heretics in France." *Letter from Pell to Thurloe*, written in 1656, and printed in *Vaughan's Protectorate of Cromwell*, vol. i. p. 436, 8vo, 1839.

Richelieu took a great step towards secularising the whole system of European politics. For, he thus made the theoretical interests of men subordinate to their practical interests. Before his time, the rulers of France, in order to punish their Protestant subjects, had not hesitated to demand the aid of the Catholic troops of Spain; and in so doing, they merely acted upon the old opinion, that it was the chief duty of a government to suppress heresy. This pernicious doctrine was first openly repudiated by Richelieu. As early as 1617, and before he had established his power, he, in an instruction to one of the foreign ministers which is still extant, laid it down as a principle, that, in matters of state, no Catholic ought to prefer a Spaniard to a French Protestant. To us, indeed, in the progress of society, such preference of the claims of our country to those of our creed, has become a matter of course; but in those days it was a startling novelty.[38] Richelieu, however, did not fear to push the paradox even to its remotest consequences. The Catholic Church justly considered that its interests were bound up with those of the House of Austria; but Richelieu, directly he was called to the council, determined to humble that house in both its branches. To effect this, he openly supported the bitterest enemies of his own religion. He aided the Lutherans against the Emperor of Germany; he aided the Calvinists against the King of Spain. During the eighteen years he was supreme, he steadily pursued the same undeviating policy. When Philip attempted to oppress the Dutch Protestants, Richelieu made common cause with them; at first, advancing them large sums of money, and afterwards inducing the French king to sign a treaty of intimate alliance

[38] Even in the reign of Henry IV. the French Protestants were not considered to be Frenchmen: "The intolerant dogmas of Roman Catholicism did not recognise them as Frenchmen. They were looked upon as foreigners, or rather as enemies; and were treated as such." *Felice, Hist. of the Protestants of France*, p. 216.

with those who, in the opinion of the church, he ought rather to have chastised as rebellious heretics[39] In the same way, when that great war broke out, in which the emperor attempted to subjugate to the true faith the consciences of German Protestants, Richelieu stood forward as their protector; he endeavoured from the beginning to save their leader the Palatine;[40] and, failing in that, he concluded in their favour an alliance with Gustavus Adolphus, the ablest military commander the Reformers had then produced. Nor did he stop there. After the death of Gustavus, he, seeing that the Protestants were thus deprived of their great leader, made still more vigorous efforts in their favour. He intrigued for them in foreign courts; he opened negotiations in their behalf; and eventually he organised for their protection a public confederacy, in which all ecclesiastical considerations were set at defiance. This league, which formed an important precedent in the international polity of Europe, was not only contracted by Richelieu with the two most powerful enemies of his own church, but it was, from its tenor, what Sismondi emphatically calls a "Protestant confederation,"—a Protestant confederation, he says, between France, England, and Holland.

These things alone would have made the administration of Richelieu a great epoch in the history of European civilisation. For, his government affords the first example of an eminent Catholic statesman

[39] De Retz mentions a curious illustration of the feelings of the ecclesiastical party respecting this treaty. He says, that the Bishop of Beauvais, who, the year after the death of Richelieu, was for a moment at the head of affairs, began his administration by giving to the Dutch their choice, either to abandon their religion, or else forfeit their alliance with France.

[40] In 1626, he attempted to form a league "en faveur du Palatin." *Sismondi, Hist. des Français*, vol. xxii. p. 576. Sismondi seems not quite certain as to the sincerity of his proposal; but as to this there can, I think, be little doubt; for it appears from his own memoirs, that even in 1624 he had in view the recovery of the Palatinate. *Mém. de Richelieu*, vol. ii. p. 405; and again in 1625, p. 468.

systematically disregarding ecclesiastical interests, and showing that disregard in the whole scheme of his foreign, as well as of his domestic, policy. Some instances, indeed, approaching to this, may be found, at an earlier period, among the petty rulers of Italian states; but, even there, such attempts had never been successful; they had never been continued for any length of time, nor had they been carried out on a scale large enough to raise them to the dignity of international precedents. The peculiar glory of Richelieu is, that his foreign policy was, not occasionally, but invariably, governed by temporal considerations; nor do I believe that, during the long tenure of his power, there is to be found the least proof of his regard for those theological interests, the promotion of which had long been looked upon as a matter of paramount importance. By thus steadily subordinating the church to the state; by enforcing the principle of this subordination, on a large scale, with great ability, and with unvarying success, he laid the foundation of that purely secular polity, the consolidation of which has, since his death, been the aim of all the best European diplomatists. The result was a most salutary change; which had been for some time preparing, but which, under him, was first completed. For, by the introduction of this system, an end was put to religious wars; and the chances of peace were increased, by thus removing one of the causes to which the interruption of peace had often been owing.[41] At the same time, there was prepared the way for that final separation of theology from politics, which it will be the business of future generations fully to achieve. How great a step had been taken in this direction, appears from the

[41] This change may be illustrated by comparing the work of Grotius with that of Vattel. These two eminent men are still respected, as the most authoritative expounders of international law; but there is this important difference between them, that Vattel wrote more than a century after Grotius, and when the secular principles enforced by Richelieu had penetrated the minds even of common politicians.

facility with which the operations of Richelieu were continued by men every way his inferiors. Less than two years after his death, there was assembled the Congress of Westphalia; the members of which concluded that celebrated peace, which is remarkable, as being the first comprehensive attempt to adjust the conflicting interests of the leading European countries. In this important treaty, ecclesiastical interests were altogether disregarded; and the contracting parties, instead of, as heretofore, depriving each other of their possessions, took the bolder course of indemnifying themselves at the expense of the church, and did not hesitate to seize her revenues, and secularize several of her bishoprics. From this grievous insult, which became a precedent in the public law of Europe, the spiritual power has never recovered: and it is remarked by a very competent authority, that, since that period, diplomatists have, in their official acts, neglected religious interests, and have preferred the advocacy of matters relating to the commerce and colonies of their respective countries.[42] The truth of this obser on is confirmed by the interesting fact, that the T...y Years' War, to which this same treaty put an end, is the last great religious war which has ever been waged;[43] no civilized people, during two centuries, having thought it worth while to peril their own safety in order to disturb the belief of their neighbours. This, indeed, is but a part of that vast secular movement, by which superstition has been weakened, and the civilisation of Europe secured. Without, however, discussing that subject, I will now endeavour to show how the policy of Richelieu,

[42] Dr Vaughan (*Protectorate of Cromwell*, vol. i. p. 104) says: "It is a leading fact, also, in the history of modern Europe, that, from the peace of Westphalia, in 1648, religion, as the great object of negotiation, began everywhere to give place to questions relating to colonies and commerce." Charles Butler observed, that this treaty "considerably lessened the influence of religion on politics." *Butler's Reminiscences*, vol. i. p. 181.

[43] The fact of the Thirty Years' War being a religious contest, formed the basis of one of the charges which the church-party brought against Richelieu.

in regard to the French Protestant Church, corresponded with his policy in regard to the French Catholic Church; so that, in both departments, this great statesman, aided by that progress of knowledge for which his age was remarkable, was able to struggle with prejudices from which men, slowly, and with infinite difficulty, were attempting to emerge.

The treatment of the French Protestants by Richelieu, is, undoubtedly, one of the most honourable parts of his system; and in it, as in other liberal measures, he was assisted by the course of preceding events. His administration, taken in connection with that of Henry IV. and the queen-regent, presents the noble spectacle of a toleration far more complete than any which had then been seen in Catholic Europe. While in other Christian countries, men were being incessantly persecuted, simply because they held opinions different from those professed by the established clergy, France refused to follow the general example, and protected those heretics whom the church was eager to punish. Indeed, not only were they protected, but, when they possessed abilities, they were openly rewarded. In addition to their appointments to civil offices, many of them were advanced to high military posts; and Europe beheld, with astonishment, the armies of the king of France led by heretical generals. Rohan, Lesdiguières, Chatillon, La Force, Bernard de Weimar, were among the most celebrated of the military leaders employed by Louis XIII.; and all of them were Protestants, as also were some younger, but distinguished, officers, such as Gassion, Rantzau, Schomberg, and Turenne. For now, nothing was beyond the reach of men who, half a century earlier, would, on account of their heresies, have been persecuted to the death. Shortly before the accession of Louis XIII., Lesdiguières, the ablest general among the French Protestants, was made marshal of France.[44]

[44] According to a contemporary, he received this appointment without having asked for it: "sans être à la cour ni l'avoir demandé." *Mém. de Fontenay Mareuil*, vol. i. p. 70. In 1622,

Fourteen years later, the same high dignity was conferred upon two other Protestants, Chatillon and La Force; the former of whom is said to have been the most influential of the schismatics. Both these appointments were in 1622; and, in 1634, still greater scandal was caused by the elevation of Sully, who, notwithstanding his notorious heresy, also received the staff of marshal of France. This was the work of Richelieu, and it gave serious offence to the friends of the church; but the great statesman paid so little attention to their clamour, that, after the civil war was concluded, he took another step equally obnoxious. The Duke de Rohan was the most active of all the enemies of the established church, and was looked up to by the Protestants as the main support of their party. He had taken up arms in their favour, and, declining to abandon his religion, had, by the fate of war, been driven from France. But Richelieu, who was acquainted with his ability, cared little about his opinions. He, therefore, recalled him from exile, employed him in a negotiation with Switzerland, and sent him on foreign service, as commander of one of the armies of the king of France.[45]

Such were the tendencies which characterised this new state of things. It is hardly necessary to observe how beneficial this great change must have been; since, by it, men were encouraged to look to their country as the first consideration, and, discarding their old disputes, Catholic soldiers were taught to obey heretical generals, and follow their standards to victory. In addition to this, the mere social amalgamation, arising from the professors of different creeds mixing in the same camp, and fighting under the same banner, must

even the lieutenants of Lesdiguières were Protestants: "ses lieutenants, qui estant tous huguenots." *Ibid.* vol. i. p. 538. These memoirs are very valuable in regard to political and military matters; their author having played a conspicuous part in the transactions which he describes.

[45] This great rise in the fortunes of Rohan took place at different times between 1632 and 1635.

have still further aided to disarm the mind, partly by merging theological feuds in a common, and yet a temporal, object, and partly by showing to each sect, that their religious opponents were not entirely bereft of human virtue; that they still retained some of the qualities of men; and that it was even possible to combine the errors of heresy with all the capabilities of a good and competent citizen.

But, while the hateful animosities by which France had long been distracted, were, under the policy of Richelieu, gradually subsiding, it is singular to observe that, though the prejudices of the Catholics obviously diminished, those of the Protestants seemed, for a time, to retain all their activity. It is, indeed, a striking proof of the perversity and pertinacity of such feelings, that it was precisely in the country, and at the period, when the Protestants were best treated, that they displayed most turbulence. And, in this, as in all such cases, the cause principally at work was the influence of that class to which circumstances, I will now explain, had secured a temporary ascendency.

For, the diminution of the theological spirit had effected in the Protestants a remarkable but a very natural result. The increasing toleration of the French government had laid open to their leaders prizes which before they could never have obtained. As long as all offices were refused to the Protestant nobles, it was natural that they should cling with the greater zeal to their own party, by whom alone their virtues were acknowledged. But, when the principle was once recognised, that the state would reward men for their abilities, without regard to their religion, there was introduced into every sect a new element of discord. The leaders of the Reformers could not fail to feel some gratitude, or, at all events, some interest for the government which employed them; and the influence of temporal considerations being thus strengthened, the influence of religious ties must have been weakened. It is impossible that opposite feelings should be paramount, at the same moment, in

the same mind. The further men extend their view, the less they care for each of the details of which the view is composed. Patriotism is a corrective of superstition; and the more we feel for our country, the less we feel for our sect. Thus it is, that in the progress of civilization, the scope of the intellect is widened; its horizon is enlarged; its sympathies are multiplied; and, as the range of its excursions is increased, the tenacity of its grasp is slackened, until, at length, it begins to perceive that the infinite variety of circumstances necessarily causes an infinite variety of opinions; that a creed, which is good and natural for one man, may be bad and unnatural for another; and that, so far from interfering with the march of religious convictions, we should be content to look into ourselves, search our own hearts, purge our own souls, soften the evil of our own passions, and extirpate that insolent and intolerant spirit, which is at once the cause and the effect of all theological controversy.

It was in this direction, that a prodigious step was taken by the French, in the first half of the seventeenth century. Unfortunately, however, the advantages which arose were accompanied by serious drawbacks. From the introduction of temporal considerations among the Protestant leaders, there occurred two results of considerable importance. The first result was, that many of the Protestants changed their religion. Before the edict of Nantes, they had been constantly persecuted, and had, as constantly, increased. But, under the tolerant policy of Henry IV. and Louis XIII., they continued to diminish.[46] Indeed, this was the natural consequence of the growth

[46] In spite of the increase of population, the Protestants diminished absolutely, as well as relatively to the Catholics. In 1598 they had 760 churches; in 1619 only 700. *Smedley's Hist. of the Reformed Religion in France*, vol. iii. pp. 46, 145. De Thou, in the preface to his History (vol. i. p. 320), observes, that the Protestants had increased during the wars carried on against them, but "diminuoient en nombre et en crédit pendant la paix."

of that secular spirit which, in every country, has assuaged religious animosities. For, by the action of that spirit, the influence of social and political views began to outweigh those theological views to which the minds of men had long been confined. As these temporal ties increased in strength, there was, of course, generated among the rival factions an increased tendency to assimilate; while, as the Catholics were not only much more numerous, but, in every respect, more influential, than their opponents, they reaped the benefit of this movement, and gradually drew over to their side many of their former enemies. That this absorption of the smaller sect into the larger, is due to the cause I have mentioned, is rendered still more evident by the interesting fact, that the change began among the heads of the party; and that it was not the inferior Protestants who first abandoned their leaders, but it was rather the leaders who deserted their followers. This was because the leaders, being more educated than the great body of the people, were more susceptible to the sceptical movement, and therefore set the example of an indifference to disputes which still engrossed the popular mind. As soon as this indifference had reached a certain point, the attractions offered by the conciliating policy of Louis XIII. became irresistible; and the Protestant nobles, in particular, being most exposed to political temptations, began to alienate themselves from their own party, in order to form an alliance with a court which showed itself ready to reward their merits.

It is, of course, impossible to fix the exact period at which this important change took place.[47] But we may say with certainty, that very early in the reign of Louis XIII. many of the Protestant nobles cared nothing for their religion, while the remainder of them ceased to feel that interest in it which they had formerly expressed. Indeed, some of the most eminent

[47] M. Ranke has noticed how the French Protestant nobles fell off from their party; but he does not seem aware of the remote causes of what he deems a sudden apostasy.

of them openly abandoned their creed, and joined that very church which they had been taught to abhor as the man of sin and the whore of Babylon. The Duke de Lesdiguières, the greatest of all the Protestant generals, became a Catholic, and, as a reward for his conversion, was made constable of France. The Duke de la Tremouille adopted the same course; as also did the Duke de la Meilleraye, the Duke de Bouillon, and a few years later the Marquis de Montausier. These illustrious nobles were among the most powerful of the members of the Reformed communion; but they quitted it without compunction, sacrificing their old associations in favour of the opinions professed by the state. Among the other men of high rank, who still remained nominally connected with the French Protestants, we find a similar spirit. We find them lukewarm respecting matters, for which, if they had been born fifty years earlier, they would have laid down their lives. The Maréchal de Bouillon, who professed himself to be a Protestant, was unwilling to change his religion; but he so comported himself as to show that he considered its interests as subordinate to political considerations.[48] A similar remark has been made by the French historians concerning the Duke de Sully and the Marquis de Chatillon, both of whom, though they were members of the Reformed church, displayed a marked indifference to those theological interests which had formerly been objects of supreme importance.[49] The result was, that when, in 1621, the Protestants began their civil war against the government, it was found that of all their great leaders, two only, Rohan and his brother

[48] "Mettoit la politique avant la religion." *Sismondi, Hist. des Français*, vol. xxii. p. 264. This was Henry Bouillon, whom some writers have confused with Frederick Bouillon. Both of them were dukes; but Henry, who was the father, and who did not actually change his religion, was the marshal.

[49] Sully advised Henry IV., on mere political considerations, to become a Catholic; and there were strong, but I believe unfounded rumours, that he himself intended taking the same course. See *Sully, Œconomies Royales*, vol. ii. p. 81, vol. vii. pp. 362, 363.

Soubise, were prepared to risk their lives in support of their religion.[50]

Thus it was, that the first great consequence of the tolerating policy of the French government was to deprive the Protestants of the support of their former leaders, and, in several instances, even to turn their sympathies on the side of the Catholic church. But the other consequence, to which I have alluded, was one of far greater moment. The growing indifference of the higher classes of Protestants threw the management of their party into the hands of the clergy. The post, which was deserted by the secular leaders, was naturally seized by the spiritual leaders. And as, in every sect, the clergy, as a body, have always been remarkable for their intolerance of opinions different to their own, it followed, that this change infused into the now mutilated ranks of the Protestants an acrimony not inferior to that of the worst times of the sixteenth century. Hence it was, that by a singular, but perfectly natural combination, the Protestants, who professed to take their stand on the right of private judgment, became, early in the seventeenth century, more intolerant than the Catholics, who based their religion on the dictates of an infallible church.

This is one of the many instances, which show how superficial is the opinion of those speculative writers, who believe that the Protestant religion is necessarily more liberal than the Catholic. If those who adopt

[50] "There were, among all the leaders, but the Duke de Rohan and his brother the Duke de Soubise, who showed themselves disposed to throw their whole fortunes into the new wars of religion." *Felice's Hist. of the Protestants of France*, p. 241. For this, M. Felice, as usual, quotes no authority; but Rohan himself says: "C'est ce qui s'est passé en cette seconde guerre (1626), où Rohan et Soubise ont eu pour contraires tous les grands de la religion de France." *Mém. de Rohan*, vol. i. p. 278. Rohan claims great merit for his religious sincerity; though, from a passage in *Mém. de Fontenay Mareuil*, vol. i. p. 418, and another in *Benoist, Hist. de l'Edit de Nantes*, vol. ii. p. 173, one may be allowed to doubt if he were so single-minded as is commonly supposed.

this view had taken the pains to study the history of Europe in its original sources, they would have learned, that the liberality of every sect depends, not at all on its avowed tenets, but on the circumstances in which it is placed, and on the amount of authority possessed by its priesthood. The Protestant religion is, for the most part, more tolerant than the Catholic, simply because the events which have given rise to Protestantism have at the same time increased the play of the intellect, and therefore lessened the power of the clergy. But whoever has read the works of the great Calvinist divines, and, above all, whoever has studied their history, must know, that in the sixteenth and seventeenth centuries, the desire of persecuting their opponents burnt as hotly among them, as it did among any of the Catholics even in the worst days of the papal dominion. This is a mere matter of fact, of which any one may satisfy himself, by consulting the original documents of those times. And even now, there is more superstition, more bigotry, and less of the charity of real religion, among the lower order of Scotch Protestants, than there is among the lower order of French Catholics. Yet, for one intolerant passage in Protestant theology, it would be easy to point out twenty in Catholic theology. The truth, however, is, that the actions of men are governed, not by dogmas, and text-books, and rubrics, but by the opinions and habits of their contemporaries, by the general spirit of their age, and by the character of those classes who are in the ascendant. This seems to be the origin of that difference between religious theory and religious practice, of which theologians greatly complain, as a stumbling-block and an evil. For, religious theories being preserved in books, in a doctrinal and dogmatic form, remain a perpetual witness, and, therefore, cannot be changed without incurring the obvious charge of inconsistency, or of heresy. But the practical part of every religion, its moral, political, and social workings, embrace such an immense variety of interests, and have to do with such

complicated and shifting agencies, that it is hopeless to fix them by formularies: they, even in the most rigid systems, are left, in a great measure, to private discretion; and, being almost entirely unwritten, they lack those precautions by which the permanence of dogmas is effectually secured.[51] Hence it is, that while the religious doctrines professed by a people in their national creed are no criterion of their civilization, their religious practice is, on the other hand, so pliant, and so capable of adaptation to social wants, that it forms one of the best standards by which the spirit of any age can be measured.

It is on account of these things, that we ought not to be surprised that, during many years, the French Protestants, who affected to appeal to the right of private judgment, were more intolerant of the exercise of that judgment by their adversaries than were the Catholics; although the Catholics, by recognizing an infallible church, ought, in consistency, to be superstitious, and may be said to inherit intolerance as their natural birthright.[52] Thus, while the Catholics were theoretically more bigoted than the Protestants, the

[51] The Church of Rome has always seen this, and on that account has been, and still is, very pliant in regard to morals, and very inflexible in regard to dogmas; a striking proof of the great sagacity with which her affairs are administered. In *Blanco White's Evidence against Catholicism*, p. 48, and in *Parr's Works*, vol. vii. pp. 454, 455, there is an unfavourable and, indeed, an unjust notice of this peculiarity, which, though strongly marked in the Romish Church, is by no means confined to it, but is found in every religious sect which is regularly organized. Locke, in his *Letters on Toleration*, observes, that the clergy are naturally more eager against error than against vice (*Works*, vol. v. pp. 6, 7, 241); and their preference of dogmas to moral truths is also mentioned by M. C. Comte, *Traité de Législat.*, vol. i. p. 245; and is alluded to by Kant in his comparison of "ein moralischer Katechismus" with a "Religionskatechismus." *Die Metaphysik der Sitten* (*Ethische Methodenlehre*), in *Kant's Werke*, vol. v. p. 321.

[52] Blanco White (*Evidence against Catholicism*, p. vi.) harshly says, "*sincere* Roman Catholics cannot conscientiously be tolerant." But he is certainly mistaken; for the question is

Protestants became practically more bigoted than the Catholics. The Protestants continued to insist upon that right of private judgment in religion, which the Catholics continued to deny. Yet, such was the force of circumstances, that each sect, in its practice, contradicted its own dogma, and acted as if it had embraced the dogma of its opponents. The cause of this change was very simple. Among the French, the theological spirit, as we have already seen, was decaying; and the decline of the influence of the clergy was, as invariably happens, accompanied by an increase of toleration. But, among the French Protestants, this partial diminution of the theological spirit had produced different consequences; because it had brought about a change of leaders, which threw the command into the hands of the clergy, and, by increasing their power, provoked a reaction, and revived those very feelings to the decay of which the reaction owed its origin. This seems to explain how it is, that a religion, which is not protected by the Government, usually displays greater energy and greater vitality than one which is so protected. In the progress of society, the theological spirit first declines among the most educated classes; and then it is that the Government can step in, as it does in England, and, controlling the clergy, make the church a creature of the State; thus weakening the ecclesiastical element by tempering it with secular considerations. But, when the State refuses to do this, the reins of power, as they fall from the hands of the upper classes, are seized by the clergy, and there arises a state of things of which the French Protestants in the seventeenth century, and the Irish Catholics in our own time, form the best illustration. In such cases, it will always happen, that the religion which is tolerated by the Government, though not fully recognised by it, will the longest retain its vitality; because its priest-

one, not of sincerity, but of consistency. A sincere Roman Catholic may be, and often is, conscientiously tolerant; a consistent Roman Catholic, never.

hood, neglected by the state, must cling the closer to the people, in whom alone is the source of their power.[53] On the other hand, in a religion which is favoured and richly endowed by the state, the union between the priesthood and inferior laity will be less intimate; the clergy will look to the government as well as to the people; and the interference of political views, of considerations of temporal expediency, and, if it may be added without irreverence, the hopes of promotion, will secularize the ecclesiastical spirit,[54] and, according to the process I have already traced, will thus hasten the march of toleration.

These generalizations, which account for a great part of the present superstition of the Irish Catholics, will also account for the former superstition of the French Protestants. In both cases, the government, disdaining the supervision of an heretical religion, allowed supreme authority to fall into the hands of the priesthood, who stimulated the bigotry of men, and encouraged them in a hatred of their opponents. What the results of this are in Ireland is best known to those of our statesmen, who, with unusual candour, have declared Ireland to be their greatest difficulty. What the results were in France we will now endeavour to ascertain.

The conciliating spirit of the French government having drawn over to its side some of the most eminent

[53] We also see this very clearly in England, where the dissenting clergy have much more influence among their hearers than the clergy of the Establishment have among theirs. This has often been noticed by impartial observers, and we are now possessed of statistical proof that "the great body of Protestant dissenters are more assiduous" in attending religious worship than churchmen are.

[54] Respecting the working of this in England, there are some shrewd remarks made by Le Blanc in his *Lettres d'un Français*, vol. i. pp. 267, 268; which may be compared with *Lord Holland's Mem. of the Whig Party*, vol. ii. p. 253, where it is suggested, that in the case of complete emancipation of the Catholics, "eligibility to worldly honours and profits would somewhat abate the fever of religious zeal."

of the French Protestants, and having disarmed the hostility of others, the leadership of the party fell, as we have already seen, into the hands of those inferior men, who displayed in their new position the intolerance characteristic of their order. Without pretending to write a history of the odious feuds that now arose, I will lay before the reader some evidence of their increasing bitterness; and I will point out a few of the steps by which the angry feelings of religious controversy became so inflamed, that at length they kindled a civil war, which nothing but the improved temper of the Catholics prevented from being as sanguinary as were the horrible struggles of the sixteenth century. For, when the French Protestants became governed by men whose professional habits made them consider heresy to be the greatest of crimes, there naturally sprung up a missionary and proselytizing spirit, which induced them to interfere with the religion of the Catholics, and, under the old pretence of turning them from the error of their ways, revived those animosities which the progress of knowledge tended to appease. And as, under such guidance, these feelings quickly increased, the Protestants soon learnt to despise that great Edict of Nantes, by which their liberties were secured; and they embarked in a dangerous contest, in which their object was, not to protect their own religion, but to weaken the religion of that very party to whom they owed a toleration, which had been reluctantly conceded by the prejudices of the age.

It was stipulated, in the edict of Nantes, that the Protestants should enjoy the full exercise of their religion; and this right they continued to possess until the reign of Louis XIV. To this there were added several other privileges, such as no Catholic government, except that of France, would then have granted to its heretical subjects. But these things did not satisfy the desires of the Protestant clergy. They were not content to exercise their own religion, unless they could also trouble the religion of others. Their first step was, to call upon the government to limit the

performance of those rites which the French Catholics had long revered as emblems of the national faith. For this purpose, directly after the death of Henry IV., they held a great assembly at Saumur, in which they formally demanded that no Catholic processions should be allowed in any town, place, or castle, occupied by the Protestants. As the government did not seem inclined to countenance this monstrous pretension, these intolerant sectaries took the law into their own hands. They not only attacked the Catholic processions wherever they met them, but they subjected the priests to personal insults, and even endeavoured to prevent them from administering the sacrament to the sick. If a Catholic clergyman was engaged in burying the dead, the Protestants were sure to be present, interrupting the funeral, turning the ceremonies into ridicule, and attempting, by their clamour, to deaden the voice of the minister, so that the service performed in the church should not be heard. Nor did they always confine themselves even to such demonstrations as these. For, certain towns having been, perhaps imprudently, placed under their control, they exercised their authority in them with the most wanton insolence. At La Rochelle, which for importance was the second city in the kingdom, they would not permit the Catholics to have even a single church in which to celebrate what for centuries had been the sole religion of France, and was still the religion of an enormous majority of Frenchmen. This, however, only formed part of a system, by which the Protestant clergy hoped to trample on the rights of their fellow-subjects. In 1619, they ordered in their general assembly at Loudun, that in none of the Protestant towns should there be a sermon preached by a Jesuit, or indeed by any ecclesiastical person commissioned by a bishop. In another assembly, they forbade any Protestant even to be present at a baptism, or at a marriage, or at a funeral, if the ceremony was performed by a Catholic priest. And, as if to cut off all hope of reconciliation, they not only vehe-

mently opposed those intermarriages between the two parties, by which, in every Christian country, religious animosities have been softened, but they publicly declared, that they would withhold the sacrament from any parents whose children were married into a Catholic family. Not, however, to accumulate unnecessary evidence, there is one other circumstance worth relating, as a proof of the spirit with which these and similar regulations were enforced. When Louis XIII., in 1620, visited Pau, he was not only treated with indignity, as being an heretical prince, but he found that the Protestants had not left him a single church, not one place, in which the king of France, in his own territory, could perform those devotions which he believed necessary for his future salvation.

This was the way in which the French Protestants, influenced by their new leaders, treated the first Catholic government which abstained from persecuting them; the first which not only allowed them the free exercise of their religion, but even advanced many of them to offices of trust and of honour.[55] All this, however, was only of a piece with the rest of their conduct. They, who in numbers and in intellect formed a miserable minority of the French nation, claimed a power which the majority had abandoned, and refused to concede to others the toleration they themselves enjoyed. Several persons, who had joined their party, now quitted it, and returned to the Catholic Church; but for exercising this undoubted right, they were insulted by the Protestant clergy in the grossest manner, with every term of opprobrium and abuse.[56] For those who resisted their authority, no treatment was considered too severe. In 1612, Ferrier, a man of some reputation in his own day,

[55] In 1625, Howell writes that the Protestants had put up an inscription on the gates of Montauban, "Roy sans foy, ville sans peur." *Howell's Letters*, p. 178.

[56] Sometimes they were called dogs returning to the vomit of popery; sometimes they were swine wallowing in the mire of idolatry. *Quick's Synodicon in Gallia*, vol. i. pp. 385, 398.

having disobeyed their injunctions, was ordered to appear before one of their synods. The gist of his offence was, that he had spoken contemptuously of ecclesiastical assemblies; and to this there were, of course, added those accusations against his moral conduct, with which theologians often attempt to blacken the character of their opponents.[57] Readers of ecclesiastical history are too familiar with such charges to attach any importance to them; but as, in this case, the accused was tried by men, who were at once his prosecutors, his enemies, and his judges, the result was easy to anticipate. In 1613 Ferrier was excommunicated, and the excommunication was publicly proclaimed in the church of Nimes. In this sentence, which is still extant, he is declared by the clergy to be "a scandalous man, a person incorrigible, impenitent, and ungovernable." We, therefore, they add, "in the name and power of our Lord Jesus Christ, by the conduct of the Holy Ghost, and with authority from the church, have cast, and do now cast and throw him out of the society of the faithful, that he may be delivered up unto Satan."

That he may be delivered up unto Satan! This was the penalty which a handful of clergymen, in a corner of France, thought they could inflict on a man who dared to despise their authority. In our time such an anathema would only excite derision;[58] but, early in the seventeenth century, the open promulgation of it was enough to ruin any private person against whom it might be directed. And they whose

[57] It is observable, that on the first occasion (*Quick's Synodicon*, vol. i. p. 362) nothing is said of Ferrier's immorality; and on the next occasion (p. 449) the synod complains, among other things, that "he hath most licentiously inveighed against, and satirically lampooned, the ecclesiastical assemblies."

[58] The notion of theologians respecting excommunication may be seen in Mr Palmer's entertaining book, *Treatise on the Church*, vol. i. pp. 64-67, vol. ii. pp. 299, 300; but the opinions of this engaging writer should be contrasted with the indignant language of Vattel, *le Droit des Gens*, vol. i. pp. 177, 178. In England, the terrors of excommunication fell into contempt towards the end of the seventeenth century.

studies have enabled them to take the measure of the ecclesiastical spirit, will easily believe that, in that age, the threat did not remain a dead letter. The people, inflamed by their clergy, rose against Ferrier, attacked his family, destroyed his property, sacked and gutted his houses, and demanded with loud cries, that the "traitor Judas" should be given up to them. The unhappy man, with the greatest difficulty, effected his escape; but though he saved his life by flying in the dead of the night, he was obliged to abandon for ever his native town, as he dared not return to a place where he had provoked so active and so implacable a party.

Into other matters, and even into those connected with the ordinary functions of government, the Protestants carried the same spirit. Although they formed so small a section of the people, they attempted to control the administration of the crown, and, by the use of threats, turn all its acts to their own favour. They would not allow the state to determine what ecclesiastical councils it should recognise; they would not even permit the king to choose his own wife. In 1615, without the least pretence of complaint, they assembled in large numbers at Grenoble and at Nimes. The deputies of Grenoble insisted that government should refuse to acknowledge the Council of Trent; and both assemblies ordered that the Protestants should prevent the marriage of Louis XIII. with a Spanish princess.[59] They laid similar claims to interfere with the disposal of civil and military offices. Shortly after the death of Henry IV., they, in an assembly at Saumur, insisted that Sully should be restored to some posts from which, in their opinion, he had been unjustly removed. In 1619, another of their assemblies at Loudun declared, that as one of the Protestant councillors of the parliament of Paris had become a Catholic, he must be dismissed; and they demanded that, for the same reason, the government of Lectoure should be taken from Fon-

[59] The consequence was, that the king was obliged to send a powerful escort to protect his bride against his Protestant subjects.

trailles, he also having adopted the not infrequent example of abandoning his sect in order to adopt a creed sanctioned by the state.

By way of aiding all this, and with the view of exasperating still further religious animosities, the principal Protestant clergy put forth a series of works, which, for bitterness of feeling, have hardly ever been equalled, and which it would certainly be impossible to surpass. The intense hatred with which they regarded their Catholic countrymen, can only be fully estimated by those who have looked into the pamphlets written by the French Protestants during the first half of the seventeenth century, or who have read the laboured and formal treatises of such men as Chamier, Drelincourt, Moulin, Thomson, and Vignier. Without, however, pausing on these, it will perhaps be thought sufficient if, for the sake of brevity, I follow the mere outline of political events. Great numbers of the Protestants had joined in the rebellion which, in 1615, was raised by Condé;[60] and, although they were then easily defeated, they seemed bent on trying the issue of a fresh struggle. In Béarn, where they were unusually numerous,[61] they, even during the reign of Henry IV., had refused to tolerate the Catholic religion; "their fanatical clergy," says the historian of France, "declaring that it would be a crime to permit the idolatry of the mass." This charitable maxim they for many years actively enforced, seizing the property of the Catholic clergy, and employing it in support of their

[60] *Bazin, Hist. de Louis XIII.*, vol. i. p. 381. Sismondi (*Hist. des Français*, vol. xxii. p. 349) says that they had no good reason for this; and it is certain that their privileges, so far from being diminished since the Edict of Nantes, had been confirmed and extended.

[61] M. Felice (*Hist. of the Protestants of France*, p. 237), says of Lower Navarre and Béarn, in 1617: "Three-fourths of the population, some say nine-tenths, belonged to the reformed communion." This is perhaps over-estimated; but we know, from De Thou, that they formed a majority in Béarn in 1566: "Les Protestans y fussent en plus grand nombre que les Catholiques."

own churches; so that, while in one part of the dominions of the king of France the Protestants were allowed to exercise their religion, they, in another part of his dominions, prevented the Catholics from exercising theirs. It was hardly to be expected that any government would suffer such an anomaly as this: and, in 1618, it was ordered that the Protestants should restore the plunder, and reinstate the Catholics in their former possessions. But the reformed clergy, alarmed at so sacrilegious a proposal, appointed a public fast, and inspiriting the people to resistance, forced the royal commissioner to fly from Pau, where he had arrived in the hope of effecting a peaceful adjustment of the claims of the rival parties.

The rebellion, thus raised by the zeal of the Protestants, was soon put down; but, according to the confession of Rohan, one of the ablest of their leaders, it was the beginning of all their misfortunes. The sword had now been drawn; and the only question to be decided was, whether France should be governed according to the principles of toleration recently established, or according to the maxims of a despotic sect, which, while professing to advocate the right of private judgment, was acting in a way that rendered all private judgment impossible.

Scarcely was the war in Béarn brought to an end, when the Protestants determined on making a great effort in the west of France. The seat of this new struggle was Rochelle, which was one of the strongest fortresses in Europe, and was entirely in the hands of the Protestants,[62] who had grown wealthy, partly by their own industry, and partly by following the occupation of public pirates. In this city, which they believed to be impregnable, they, in December 1620, held a Great Assembly, to which their spiritual chiefs flocked from all parts of France. It was soon evident that their party was now governed by men who were

[62] Their first church was established in 1556 (*Ranke's Civil Wars in France*, vol. i. p. 360); but, by the reign of Charles IX. the majority of the inhabitants were Protestants.

bent on the most violent measures. Their great secular leaders were, as we have already seen, gradually falling off; and, by this time, there only remained two of much ability, Rohan and Mornay, both of whom saw the inexpediency of their proceedings, and desired that the assembly should peaceably separate. But the authority of the clergy was irresistible; and, by their prayers and exhortations, they easily gained over the ordinary citizens, who were then a gross and uneducated body. Under their influence, the assembly adopted a course which rendered civil war inevitable. Their first act was an edict, by which they at once confiscated all the property belonging to Catholic churches. They then caused a great seal to be struck; under the authority of which they ordered that the people should be armed, and taxes collected from them for the purpose of defending their religion. Finally, they drew up the regulations, and organised the establishment, of what they called the Reformed Churches of France and of Béarn; and, with a view to facilitate the exercise of their spiritual jurisdiction, they parcelled out France into eight circles, to each of which there was allotted a separate general; who, however, was to be accompanied by a clergyman, since the administration, in all its parts, was held responsible to that ecclesiastical assembly which called it into existence.

Such were the forms and pomp of authority assumed by the spiritual leaders of the French Protestants; men by nature destined to obscurity, and whose abilities were so despicable, that, notwithstanding their temporary importance, they have left no name in history. These insignificant priests, who, at the best, were only fit to mount the pulpit of a country village, now arrogated to themselves the right of ordering the affairs of France, imposing taxes upon Frenchmen, confiscating property, raising troops, levying war; and all this for the sake of propagating a creed, which was scouted by the country at large as a foul and mischievous heresy.

In the face of these inordinate pretensions, it was evident that the French government had no choice,

except to abdicate its functions, or else take arms in its own defence.[63] Whatever may be the popular notion respecting the necessary intolerance of the Catholics, it is an indisputable fact, that, early in the seventeenth century, they displayed in France a spirit of forbearance, and a Christian charity, to which the Protestants could make no pretence. During the twenty-two years which elapsed between the Edict of Nantes and the Assembly of Rochelle, the government, notwithstanding repeated provocations, never attacked the Protestants; nor did they make any attempt to destroy the privileges of a sect, which they were bound to consider heretical, and the extirpation of which had been deemed by their fathers to be one of the first duties of a Christian statesman.

The war that now broke out lasted seven years, and was uninterrupted, except by the short peace, first of Montpelier, and afterwards of Rochelle; neither of which, however, was very strictly preserved. But the difference in the views and intentions of the two parties, corresponded to the difference between the classes which governed them. The Protestants, being influenced mainly by the clergy, made their object religious domination. The Catholics, being led by statesmen, aimed at temporal advantages. Thus it was, that circumstances had, in France, so completely obliterated the original tendency of these two great sects, that by a singular metamorphosis, the secular principle was now represented by the Catholics, and the theological principle by the Protestants. The authority of the clergy, and therefore the interests of superstition, were upheld by that very party which owed its origin to the diminution of both; they were, on the other hand, attacked by a party whose success had hitherto depended on the increase of both. If the

[63] Even Mosheim, who, as a Protestant, was naturally prejudiced in favour of the Huguenots, says, that they had established "imperium in imperio;" and he ascribes to the violence of their rulers the war of 1621. *Mosheim's Eccles. Hist.* vol. ii. pp. 237, 238.

Catholics triumphed, the ecclesiastical power would be weakened; if the Protestants triumphed, it would be strengthened. Of this fact, so far as the Protestants are concerned, I have just given ample proof, collected from their proceedings, and from the language of their own synods. And that the opposite, or secular principle, predominated among the Catholics, is evident, not only from their undeviating policy in the reigns of Henry IV. and Louis XIII., but also from another circumstance worthy of note. For, their motives were so obvious, and gave such scandal to the church, that the pope, as the great protector of religion, thought himself bound to reprehend that disregard of theological interests which they displayed, and which he considered to be a crying and unpardonable offence. In 1622, only one year after the struggle between the Protestants and Catholics had begun, he strongly remonstrated with the French government upon the notorious indecency of which they were guilty, in carrying on war against heretics, not for the purpose of suppressing the heresy, but merely with a view of procuring for the state those temporal advantages which, in the opinion of all pious men, ought to be regarded as of subordinate importance.

If, at this juncture, the Protestants had carried the day, the loss to France would have been immense, perhaps irreparable. For no one, who is acquainted with the temper and character of the French Calvinists, can doubt, that if they had obtained possession of the government, they would have revived those religious persecutions which, so far as their power extended, they had already attempted to enforce. Not only in their writings, but even in the edicts of their assemblies, we find ample proof of that meddling and intolerant spirit which, in every age, has characterized ecclesiastical legislation. Indeed, such a spirit is the legitimate consequence of the fundamental assumption from which theological lawgivers usually start. The clergy are taught to consider that their paramount duty is to preserve the purity of the faith, and guard it against

the invasions of heresy. Whenever, therefore, they rise to power, it almost invariably happens, that they carry into politics the habits they have contracted in their profession; and having long been accustomed to consider religious error as criminal, they now naturally attempt to make it penal. And as all the European countries have, in the period of their ignorance, been once ruled by the clergy, just so do we find in the law books of every land those traces of their power which the progress of knowledge is gradually effacing. We find the professors of the dominant creed enacting laws against the professors of other creeds; laws sometimes to burn them, sometimes to exile them, sometimes to take away their civil rights, sometimes only to take away their political rights. These are the different gradations through which persecution passes; and by observing which, we may measure, in any country, the energy of the ecclesiastical spirit. At the same time, the theory by which such measures are supported, generally gives rise to other measures of a somewhat different, though of an analogous character. For, by extending the authority of law to opinions as well as to acts, the basis of legislation becomes dangerously enlarged; the individuality and independence of each man are invaded; and encouragement is given to the enactment of intrusive and vexatious regulations, which are supposed to perform for morals the service that the other class of laws performs for religion. Under pretence of favouring the practice of virtue, and maintaining the purity of society, men are troubled in their most ordinary pursuits, in the commonest occurrences of life, in their amusements, nay, even in the very dress they may be inclined to wear. That this is what has actually been done, must be known to whoever has looked into the writings of the fathers, into the canons of Christian councils, into the different systems of ecclesiastical law, or into the sermons of the earlier clergy. Indeed, all this is so natural, that regulations, conceived in the same spirit, were drawn up for the government of Geneva by the Calvinist

clergy, and for the government of England by Archbishop Cranmer and his coadjutors; while a tendency, precisely identical, may be observed in the legislation of the Puritans, and, to give a still later instance, in that of the Methodists. It is, therefore, not surprising that, in France, the Protestant clergy, having great power among their own party, should enforce a similar discipline. Thus, to mention only a few examples, they forbade any one to go to the theatre, or even to witness the performance of private theatricals. They looked upon dancing as an ungodly amusement, and, therefore, they not only strictly prohibited it, but they ordered that all dancing-masters should be admonished by the spiritual power, and desired to abandon so unchristian a profession. If, however, the admonition failed in effecting its purpose, the dancing-masters, thus remaining obdurate, were to be excommunicated. With the same pious care did the clergy superintend other matters equally important. In one of their synods, they ordered that all persons should abstain from wearing gay apparel, and should arrange their hair with becoming modesty.[64] In another synod, they forbade women to paint; and they declared, that if, after this injunction, any woman persisted in painting, she should not be allowed to receive the sacrament. To their own clergy, as the instructors and shepherds of the flock, there was paid an attention still more scrupulous. The ministers of the word were permitted to teach Hebrew, because Hebrew is a sacred dialect, uncontaminated by profane writers. But the Greek language, which contains all the philosophy and nearly all the wisdom of antiquity, was to be discouraged, its study laid aside, its professorship suppressed.[65] And, in order that the mind might not be

[64] "And both sexes are required to keep modesty in their hair," *Ibid.* vol. i. p. 119.

[65] The synod of Alez, in 1620, says, "A minister may at the same time be professor in divinity and of the Hebrew tongue. But it is not seemly for him to profess the Greek also, because the most of his employment will be taken up in the exposition of

distracted from spiritual things, the study of chemistry was likewise forbidden; such a mere earthly pursuit being incompatible with the habits of the sacred profession.[66] Lest, however, in spite of these precautions, knowledge should still creep in among the Protestants, other measures were taken to prevent even its earliest approach. The clergy, entirely forgetting that right of private judgment upon which their sect was founded, became so anxious to protect the unwary from error, that they forbade any person to print or publish a work without the sanction of the church, in other words, without the sanction of the clergy themselves. When, by these means, they had destroyed the possibility of free inquiry, and, so far as they were able, had put a stop to the acquisition of all real knowledge, they proceeded to guard against another circumstance to which their measures had given rise. For, several of the Protestants, seeing that under such a system, it was impossible to educate their families with advantage, sent their children to some of those celebrated Catholic colleges, where alone a sound education could then be obtained. But the clergy, so soon as they heard of this practice, put an end to it by excommunicating the offending parents; and to this there was added an order forbidding them to admit into their own private houses any tutor who professed the Catholic religion. Such was the way in which the French Protestants were watched over and protected by their spiritual masters. Even the minutest matters were not beneath the notice of these great legislators. They ordered that no person should go to a ball or masquerade; nor ought any Christian to look at the

Pagan and profane authors, unless he be discharged from the ministry." *Quick's Synodicon*, vol. ii. p. 57. Three years later, the synod of Charenton suppressed altogether the Greek professorships, "as being superfluous and of small profit." *Ibid.*, vol. ii. p. 115.

[66] The synod of St Maixant, in 1609, orders that "colloquies and synods shall have a watchful eye over those ministers who study chemistry, and grievously reprove and censure them." *Ibid.*, vol. i. p. 314.

tricks of conjurors, or at the famous game of goblets, or at the puppet-show; neither was he to be present at morris-dances; for all such amusements should be suppressed by the magistrates, because they excite curiosity, cause expense, waste time.[67] Another thing to be attended to, is the names that are bestowed in baptism. A child may have two Christian names, though one is preferable.[68] Great care, however, is to be observed in their selection. They ought to be taken from the Bible, but they ought not to be Baptist or Angel; neither should any infant receive a name which has been formerly used by the Pagans. When the children are grown up there are other regulations to which they must be subject. The clergy declared that the faithful must by no means let their hair grow long, lest by so doing they indulge in the luxury of "lascivious curls."[69] They are to make their garments in such a manner as to avoid "the new-fangled fashions of the world": they are to have no tassels to their dress: their gloves must be without silk and ribands: they are to abstain from fardingales: they are to beware of wide sleeves.[70]

Those readers who have not studied the history of ecclesiastical legislation, will perhaps be surprised to find, that men of gravity, men who had reached the years of discretion, and were assembled together in solemn council, should evince such a prying and

[67] "All Christian magistrates are advised not in the least to suffer them, because it feeds foolish curiosity, puts upon unnecessary expenses, and wastes time." *Ibid.*, vol. i. p. 194.

[68] This was a very knotty question for the theologians; but it was at length decided in the affirmative by the Synod of Saumur: "On the 13th article of the same chapter, the deputies of Poictou demanded, whether two names might be given a child at baptism? To which it was replied: "The thing was indifferent; however, parents were advised to observe herein Christian simplicity." *Ibid.*, vol. i. p. 178.

[69] I quote the language of the synod of Castres, in 1626. *Ibid.*, vol ii. p. 174.

[70] In the same way, the Spanish clergy, early in the present century, attempted to regulate the dress of women.

puerile spirit; that they should display such miserable and childish imbecility. But, whoever will take a wider survey of human affairs, will be inclined to blame, not so much the legislators, as the system of which the legislators formed a part. For as to the men themselves, they merely acted after their kind. They only followed the traditions in which they were bred. By virtue of their profession, they had been accustomed to hold certain views, and, when they rose to power, it was natural that they should carry those views into effect; thus transplanting into the law-book the maxims they had already preached in the pulpit. Whenever, therefore, we read of meddling, inquisitive, and vexatious regulations imposed by ecclesiastical authority, we should remember, that they are but the legitimate result of the ecclesiastical spirit; and that the way to remedy such grievances, or to prevent their occurrence, is not by vainly labouring to change the tendencies of that class from whence they proceed, but rather by confining the class within its proper limits, by jealously guarding against its earliest encroachments, by taking every opportunity of lessening its influence, and finally, when the progress of society will justify so great a step, by depriving it of that political and legislative power which, though gradually falling from its hands, it is, even in the most civilized countries, still allowed in some degree to retain.

But, setting aside these general considerations, it will, at all events, be admitted, that I have collected sufficient evidence to indicate what would have happened to France, if the Protestants had obtained the upper hand. After the facts which I have brought forward, no one can possibly doubt, that if such a misfortune had occurred, the liberal and, considering the age, the enlightened policy of Henry IV. and Louis XIII. would have been destroyed, in order to make way for that gloomy and austere system which, in every age, and in every country, has been found to be the natural fruit of ecclesiastical power. To put, therefore, the question in its proper form, instead

of saying that there was a war between hostile creeds, we should rather say that there was a war between rival classes. It was a contest, not so much between the Catholic religion and the Protestant religion, as between Catholic laymen and Protestant clergy. It was a struggle between temporal interests and theological interests,—between the spirit of the present and the spirit of the past. And the point now at issue was, whether France should be governed by the civil power or by the spiritual power,—whether she should be ruled according to the large views of secular statesmen, or according to the narrow notions of a factious and intolerant priesthood.

The Protestants having the great advantage of being the aggressive party, and being, moreover, inflamed by a religious zeal unknown to their opponents, might, under ordinary circumstances, have succeeded in their hazardous attempt; or, at all events, they might have protracted the struggle for an indefinite period. But, fortunately for France, in 1624, only three years after the war began, Richelieu assumed the direction of the government. He had for some years been the secret adviser of the queen-mother, into whose mind he had always inculcated the necessity of complete toleration. When placed at the head of affairs, he pursued the same policy, and attempted in every way to conciliate the Protestants. The clergy of his own party were constantly urging him to exterminate the heretics, whose presence they thought polluted France. But Richelieu, having only secular objects, refused to embitter the contest by turning it into a religious war. He was determined to chastise the rebellion, but he would not punish the heresy. Even while the war was raging, he would not revoke those edicts of toleration, by which the full liberty of religious worship was granted to the Protestants. And when they, in 1626, showed signs of compunction, or at all events of fear, he publicly confirmed the Edict of Nantes, and he granted them peace; although, as he says, he knew that by doing so, he should fall under the suspicion

of those "who so greatly affected the name of zealous Catholics." A few months afterwards war again broke out; and then it was that Richelieu determined on that celebrated siege of Rochelle, which, if brought to a successful issue, was sure to be a decisive blow against the French Protestants. That he was moved to this hazardous undertaking solely by secular considerations, is evident, not only from the general spirit of his preceding policy, but also from his subsequent conduct. With the details of this famous siege, history is not concerned, as such matters have no value, except to military readers. It is enough to say that, in 1628, Rochelle was taken; and the Protestants, who had been induced by their clergy to continue to resist long after relief was hopeless, and who, in consequence, had suffered the most dreadful hardships, were obliged to surrender at discretion.[71] The privileges of the town were revoked, and its magistrates removed; but the great minister, by whom these things were effected, still abstained from that religious persecution to which he was urged. He granted to the Protestants the toleration which he had offered at an earlier period, and he formally conceded the free exercise of their public worship. But, such was their infatuation, that because he likewise restored the exercise of the Catholic religion, and thus gave to the conquerors the same liberty that he had granted to the conquered, the Protestants murmured at the indulgence; they could not bear the idea that their eyes should be offended by the performance of Popish rites. And their indignation waxed so high, that the next year they, in another part of France, again rose in arms. As, however, they were now stripped of their principal resources, they were easily defeated; and, their existence as a political faction being destroyed, they were, in reference to their religion, treated by Richelieu in

[71] Fontenay Mareuil, who was an eye-witness, says, that the besieged, in some instances, ate their own children; and that the burial-grounds were guarded, to prevent the corpses from being dug up and turned into food. *Mém de Fontenay Mareuil*, vol. ii. p. 119.

the same manner as before. To the Protestants generally, he confirmed the privilege of preaching and of performing the other ceremonies of their creed. To their leader, Rohan, he granted an amnesty, and, a few years afterwards, employed him in important public services. After this, the hopes of the party were destroyed; they never again rose in arms, nor do we find any mention of them until a much later period, when they were barbarously persecuted by Louis XIV. But from all such intolerance Richelieu sedulously abstained; and having now cleared the land from rebellion, he embarked in that vast scheme of foreign policy, of which I have already given some account, and in which he clearly showed that his proceedings against the Protestants had not been caused by hatred of their religious tenets. For, the same party which he attacked at home, he supported abroad. He put down the French Protestants, because they were a turbulent faction that troubled the state, and wished to suppress the exercise of all opinions unfavourable to themselves. But, so far from carrying on a crusade against their religion, he, as I have already observed, encouraged it in other countries; and, though a bishop of the Catholic church, he did not hesitate, by treaties, by money, and by force of arms, to support the Protestants against the House of Austria, maintain the Lutherans against the Emperor of Germany, and uphold the Calvinists against the King of Spain.

I have thus endeavoured to draw a slight, though, I trust, a clear outline, of the events which took place in France during the reign of Louis XIII., and particularly during that part of it which included the administration of Richelieu. But such occurrences, important as they are, only formed a single phase of that larger development which was now displaying itself in nearly every branch of the national intellect. They were the mere political expression of that bold and sceptical spirit which cried havoc to the prejudices and superstitions of men. For, the government of Richelieu was successful, as well as progressive; and no government can unite these two

qualities, unless its measures harmonize with the feelings and temper of the age. Such an administration, though it facilitates progress, is not the cause of it, but is rather its measure and symptom. The cause of the progress lies far deeper, and is governed by the general tendency of the time. And as the different tendencies observable in successive generations depend on the difference in their knowledge, it is evident, that we can only understand the working of the tendencies, by taking a wide view of the amount and character of the knowledge. To comprehend, therefore, the real nature of the great advance made during the reign of Louis XIII., it becomes necessary that I should lay before the reader some evidence respecting those higher and more important facts, which historians are apt to neglect, but without which the study of the past is an idle and trivial pursuit, and history itself a barren field, which, bearing no fruit, is unworthy of the labour that is wasted on the cultivation of so ungrateful a soil.

It is, indeed, a very observable fact, that while Richelieu, with such extraordinary boldness, was secularizing the whole system of French politics, and by his disregard of ancient interests, was setting at naught the most ancient traditions, a course precisely similar was being pursued, in a still higher department, by a man greater than he; by one, who, if I may express my own opinion, is the most profound among the many eminent thinkers France has produced. I speak of Réné Descartes, of whom the least that can be said is, that he effected a revolution more decisive than has ever been brought about by any other single mind. With his mere physical discoveries we are not now concerned, because in this Introduction I do not pretend to trace the progress of science, except in those epochs which indicate a new turn in the habits of national thought. But I may remind the reader, that he was the first who successfully applied algebra to geometry;[72] that he pointed out the

[72] Thomas (*Eloge*, in *Œuvres de Descartes*, vol. i. p. 32) says, "cet instrument, c'est Descartes qui l'a créé; c'est l'application

important law of the sines ;[73] that in an age in which optical instruments were extremely imperfect, he discovered the changes to which light is subjected in the eye by the crystalline lens ;[74] that

de l'algèbre à la géométrie." And this, in the highest sense, is strictly true ; for although Vieta and two or three others in the sixteenth century had anticipated this step, we owe entirely to Descartes the magnificent discovery of the possibility of applying algebra to the geometry of curves, he being undoubtedly the first who expressed them by algebraic equations.

[73] The statements of Huygens and of Isaac Vossius to the effect that Descartes had seen the papers of Snell before publishing his discovery, are unsupported by any direct evidence ; at least none of the historians of science, so far as I am aware, have brought forward any. So strong, however, is the disposition of mankind at large to depreciate great men, and so general is the desire to convict them of plagiarism, that this charge, improbable in itself, and only resting on the testimony of two envious rivals, has been not only revived by modern writers, but has been, even in our own time, spoken of as a well-established and notorious fact ! The flimsy basis of this accusation is clearly exposed by M. Bordas Demoulin, in his valuable work *La Cartésianisme*, Paris, 1843, vol. ii. pp. 9-12 ; while, on the other side of the question, I refer with regret to *Sir D. Brewster on the Progress of Optics, Second Report of British Association*, pp. 309, 310 ; and to *Whewell's Hist. of the Inductive Sciences*, vol. ii. pp. 379, 502, 503.

[74] What makes this the more observable is, that the study of the crystalline lens was neglected long after the death of Descartes, and no attempt made for more than a hundred years to complete his views by ascertaining its intimate structure. Indeed, it is said (*Thomson's Animal Chemistry*, p. 512) that the crystalline lens and the two humours were first analyzed in 1802. Compare *Simon's Animal Chemistry*, vol. ii. pp. 419, 421 ; *Henle, Traité d'Anatomie*, vol. i. p. 357 ; *Lepelletier, Physiologie Médicale*, vol. iii. p. 160 ; *Mayo's Human Physiol.*, p. 279 ; *Blainville, Physiol, comparée*, vol. iii. pp. 325-328 ; none of whom refer to any analysis earlier than the nineteenth century. I notice this partly as a contribution to the history of our knowledge, and partly as proving how slow men have been in following Descartes, and in completing his views ; for, as M. Blainville justly observes, the chemical laws of the lens must be understood, before we can exhaustively generalize the optical laws of its refraction ; so that, in fact, the researches of Berzelius on the eye are complemental to those of Descartes. The theory of the limitation of the crystalline lens according

he directed attention to the consequences resulting from the weight of the atmosphere; and that he, moreover, detected the causes of the rainbow,[75] that singular phenomenon, with which, in the eyes of the vulgar, some theological superstitions are still connected. At the same time, and as if to combine the most varied forms of excellence, he is not only allowed to be the first geometrician of the age, but, by the clearness and admirable precision of his style, he became one of the founders of French prose. And although he was constantly engaged in those lofty inquiries into the nature of the human mind, which can never be studied without wonder, I had almost said can never be read without awe, he combined with them a long course of laborious experiment upon the animal frame, which raised him to the highest rank among the anatomists of his time. The great discovery made by Harvey of the circulation of the blood, was neglected by most of his contemporaries;[76] but it was at once recognized by Descartes,

to the descending scale of the animal kingdom, and the connexion between its development and a general increase of sensuous perception, seem to have been little studied; but Dr Grant (*Comparative Anatomy*, p. 252) thinks that the lens exists in some of the rotifera; while in regard to its origin, I find a curious statement in *Müller's Physiology*, vol. i. p. 450, that after its removal in mammals, it has been reproduced by its matrix, the capsule. (If this can be relied on, it will tell against the suggestion of Schwann, who supposes, in his *Microscopical Researches*, 1847, pp. 87, 88, that its mode of life is vegetable, and that it is not "a secretion of its capsule.") As to its probable existence in the hydrozoa, see *Rymer Jones's Animal Kingdom*, 1855, p. 96, "regarded either as a crystalline lens, or an otolithe."

[75] Dr Whewell, who has treated Descartes with marked injustice, does nevertheless allow that he is "the genuine author of the explanation of the rainbow."

[76] Dr Whewell (*Hist. of the Inductive Sciences*, vol. iii. p. 440) says, "It was for the most part readily accepted by his countrymen; but that abroad it had to encounter considerable opposition." For this no authority is quoted; and yet one would be glad to know who told Dr Whewell that the discovery was readily accepted. So far from meeting in England with ready acceptance, it was during many years almost universally

who made it the basis of the physiological part of his work on Man. He likewise adopted the discovery of the lacteals by Aselli, which, like every great truth yet laid before the world, was, at its first appearance, not only disbelieved, but covered with ridicule.[77]

These things might have been sufficient to rescue even the physical labours of Descartes from the attacks constantly made on them by men who either have not studied his works, or else, having studied them, are unable to understand their merit. But the glory of Descartes, and the influence he exercised over his age, do not depend even on such claims as these. Putting them aside, he is the author of what is emphatically called Modern Philosophy. He is the originator of that great system and method of metaphysics, which, notwithstanding its errors, has the undoubted merit of having given a wonderful impulse to the European mind, and communicated to it an activity which has been made available for other purposes of a different character. Besides this, and superior to it, there is another obligation which we are under to the memory of Descartes. He deserves the gratitude of posterity, not so much on account of what he built up, as on account of what he pulled down. His life was one great and successful warfare against the prejudices and

denied. Aubrey was assured by Harvey that in consequence of his book on the Circulation of the Blood he lost much of his practice, was believed to be crackbrained, and was opposed by "all the physicians." *Aubrey's Letters and Lives*, vol. ii. p. 383. Dr Willis (*Life of Harvey*, p. xli. in *Harvey's Works*, edit. Sydenham Society, 1847) says, "Harvey's views were at first rejected almost universally." Dr Elliotson (*Human Physiology*, p. 194) says, "His immediate reward was general ridicule and abuse, and a great diminution of his practice." Broussais (*Examen des Doctrines Médicales*, vol. i. p. vii.) says, "Harvey passa pour fou quand il annonça la découverte de la circulation." Finally, Sir William Temple, who belongs to the generation subsequent to Harvey, and who, indeed, was not born until some years after the discovery was made, mentions it in his works in such a manner as to show that even then it was not universally received by educated men.

[77] Even Harvey denied it to the last.

traditions of men. He was great as a creator, but he was far greater as a destroyer. In this respect he was the true successor of Luther, to whose labours his own were the fitting supplement. He completed what the great German reformer had left undone. He bore to the old systems of philosophy precisely the same relation that Luther bore to the old systems of religion. He was the great reformer and liberator of the European intellect. To prefer, therefore, even the most successful discoverers of physical laws, to this great innovator and disturber of tradition, is just as if we should prefer knowledge to freedom, and believe that science is better than liberty. We must, indeed, always be grateful to those eminent thinkers, to whose labours we are indebted for that vast body of physical truths which we now possess. But, let us reserve the full measure of our homage for those far greater men, who have not hesitated to attack and destroy the most inveterate prejudices; men who, by removing the pressure of tradition, have purified the very source and fountain of our knowledge, and secured its future progress, by casting off obstacles in the presence of which progress was impossible.

It will not be expected, perhaps it will hardly be desired, that I should enter into a complete detail of the philosophy of Descartes; a philosophy which, in England at least, is rarely studied, and, therefore, is often attacked. But it will be necessary to give such an account of it as will show its analogy with the anti-theological policy of Richelieu, and will thus enable us to see the full extent of that vast movement which took place in France before the accession of Louis XIV. By this means, we shall be able to understand how the daring innovations of the great minister were so successful, since they were accompanied and reinforced by corresponding innovations in the national intellect; thus affording an additional instance of the way in which the political history of every country is to be explained by the history of its intellectual progress.

In 1637, when Richelieu was at the height of his

power, Descartes published that great work which he had long been meditating, and which was the first open announcement of the new tendencies of the French mind. To this work he gave the name of a "Method"; and, assuredly, the method is the most alien to what is commonly called theology that can possibly be conceived. Indeed, so far from being theological, it is essentially and exclusively psychological. The theological method rests on ancient records, on tradition, on the voice of antiquity. The method of Descartes rests solely on the consciousness each man has of the operations of his own mind. And, lest any one should mistake the meaning of this, he, in subsequent works, developed it at great length, and with unrivalled clearness. For his main object was to popularize the views which he put forward. Therefore, says Descartes, "I write in French rather than in Latin, because I trust that they who only employ their simple and native reason will estimate my opinions more fairly than they who only believe in ancient books." So strongly does he insist upon this, that almost at the beginning of his first work, he cautions his readers against the common error of looking to antiquity for knowledge; and he reminds them that "when men are too curious to know the practices of past ages, they generally remain very ignorant of their own."

Indeed, so far from following the old plan of searching for truth in the records of the past, the great essential of this new philosophy is to wean ourselves from all such associations, and, beginning the acquisition of knowledge by the work of destruction, first pull down, in order that afterwards we may build up. When I, says Descartes, set forth in the pursuit of truth, I found that the best way was to reject every thing I had hitherto received, and pluck out all my old opinions, in order that I might lay the foundation of them afresh: believing that, by this means, I should more easily accomplish the great scheme of life, than by building on an old basis, and supporting myself by principles which I had learned in my youth, without examining

if they were really true. "I, therefore, will occupy myself freely and earnestly in effecting a general destruction of all my old opinions." For, if we would know all the truths that can be known, we must, in the first place, free ourselves from our prejudices, and make a point of rejecting those things which we have received, until we have subjected them to a new examination. We, therefore, must derive our opinions, not from tradition, but from ourselves. We must not pass judgment upon any subject which we do not clearly and distinctly understand; for, if even such a judgment is correct, it can only be so by accident, not having solid ground upon which to support itself. But, so far are we from this state of indifference, that our memory is full of prejudices: we pay attention to words rather than things; and, being thus slaves to form, there are too many of us who "believe themselves religious, when, in fact, they are bigoted and superstitious; who think themselves perfect because they go much to church, because they often repeat prayers, because they wear short hair, because they fast, because they give alms. These are the men who imagine themselves such friends of God, that nothing they do displeases Him; men who, under pretence of zeal, gratify their passions by committing the greatest crimes, such as betraying towns, killing princes, exterminating nations: and all this they do to those who will not change their opinions."

These were the words of wisdom which this great teacher addressed to his countrymen only a few years after they had brought to a close the last religious war that has ever been waged in France. The similarity of these views to those which, about the same time, were put forth by Chillingworth, must strike every reader, but ought not to excite surprise; for they were but the natural products of a state of society in which the right of private judgment, and the independence of the human reason, were first solidly established. If we examine this matter a little closer, we shall find still further proof of the analogy between France and

England. So identical are the steps of the progress, that the relation which Montaigne bears to Descartes is just the same as that which Hooker bears to Chillingworth; the same in reference to the difference of time, and also in reference to the difference of opinions. The mind of Hooker was essentially sceptical; but his genius was so restrained by the prejudices of his age, that, unable to discern the supreme authority of private judgment, he hampered it by appeals to councils and to the general voice of ecclesiastical antiquity: impediments which Chillingworth, thirty years later, effectually removed. In precisely the same way, Montaigne, like Hooker, was sceptical; but, like him, he lived at a period when the spirit of doubt was yet young, and when the mind still trembled before the authority of the Church. It is, therefore, no wonder that even Montaigne, who did so much for his age, should have hesitated respecting the capacity of men to work out for themselves great truths; and that, pausing in the course that lay before him, his scepticism should often have assumed the form of a distrust of the human faculties. Such shortcomings, and such imperfections, are merely an evidence of the slow growth of society, and of the impossibility for even the greatest thinkers to outstrip their contemporaries beyond a certain point. But, with the advance of knowledge, this deficiency was at length supplied; and, as the generation after Hooker brought forth Chillingworth, just so did the generation after Montaigne bring forth Descartes. Both Chillingworth and Descartes were eminently sceptical; but their scepticism was directed, not against the human intellect, but against those appeals to authority and tradition, without which it had hitherto been supposed that the intellect could not safely proceed. That this was the case with Chillingworth, we have already seen. That it was likewise the case with Descartes, is, if possible, still more apparent; for that profound thinker believed, not only that the mind, by its own efforts, could root out its most ancient opinions, but that it

could, without fresh aid, build up a new and solid system in place of the one which it had thrown down.

It is this extraordinary confidence in the power of the human intellect, which eminently characterizes Descartes, and has given to his philosophy that peculiar sublimity which distinguishes it from all other systems. So far from thinking that a knowledge of the external world is essential to the discovery of truth, he laid it down as a fundamental principle, that we must begin by ignoring such knowledge;[78] that the first step is to separate ourselves from the delusions of nature, and reject the evidence presented to our senses. For, says Descartes, nothing is certain but thought; nor are there any truths except those which necessarily follow from the operation of our own consciousness. We have no knowledge of our soul except as a thinking substance; and it were easier for us to believe that the soul should cease to exist, than that it should cease to think. And, as to man himself, what is he but the incarnation of thought? For that which constitutes the man, is not his bones, nor his flesh, nor his blood. These are the accidents, the incumbrances, the impediments of his nature. But the man himself is the

[78] According to the view of Descartes, it was to be ignored, not denied. There is no instance to be found in his works of a denial of the existence of the external world; nor does the passage quoted from him by Mr Jobert (*New System of Philos.* vol. ii. pp. 161, 162, Loud. 1849) at all justify the interpretation of that ingenious writer, who confuses certainty in the ordinary sense of the word with certainty in the Cartesian sense. A similar error is made by those who suppose that his "Je pense, donc je suis" is an enthymeme; and having taken this for granted, they turn on the great philosopher, and accuse him of begging the question! Such critics overlook the difference between a logical process and a psychological one; and therefore they do not see that this famous sentence was the description of a mental fact, and not the statement of a mutilated syllogism. The student of the philosophy of Descartes must always distinguish between these two processes, and remember that each process has an order of proof peculiar to itself; or at all events he must remember that such was the opinion of Descartes.

thought. The invisible me, the ultimate fact of existence, the mystery of life, is this: "I am a thing that thinks." This, therefore, is the beginning and the basis of our knowledge. The thought of each man is the last element to which analysis can carry us; it is the supreme judge of every doubt; it is the starting-point for all wisdom.

Taking our stand on this ground, we rise, says Descartes, to the perception of the existence of the Deity. For, our belief in his existence is an irrefragable proof that he exists. Otherwise, whence does the belief arise? Since nothing can come out of nothing, and since no effect can be without a cause, it follows that the idea we have of God must have an origin; and this origin, whatever name we give it, is no other than God. Thus, the ultimate proof of His existence is our idea of it. Instead, therefore, of saying that we know ourselves because we believe in God, we should rather say that we believe in God because we know ourselves. This is the order and precedence of things. The thought of each man is sufficient to prove His existence, and it is the only proof we can ever possess. Such, therefore, is the dignity and supremacy of the human intellect, that even this, the highest of all matters, flows from it, as from its sole source. Hence, our religion should not be acquired by the teaching of others, but should be worked out by ourselves; it is not to be borrowed from antiquity, but it is to be discovered by each man's mind; it is not traditional, but personal. It is because this great truth has been neglected, that impiety has arisen. If each man were to content himself with that idea of God which is suggested by his own mind, he would attain to a true knowledge of the Divine Nature. But when, instead of confining himself to this, he mixes up with it the notions of others, his ideas become perplexed; they contradict themselves; and, the composition being thus confused, he often ends by denying the existence, not, indeed, of God, but of such a God as that in whom he has been taught to believe.

The mischief which these principles must have done to the old theology is very obvious. Not only were they fatal, in the minds of those who received them, to many of the common dogmas—such, for instance, as that of transubstantiation,—but they were likewise directly opposed to other opinions, equally indefensible, and far more dangerous. For Descartes, by founding a philosophy which rejected all authority except that of the human reason, was, of course, led to abandon the study of final causes,—an old and natural superstition, by which, as we shall hereafter see, the German philosophers were long impeded, and which still hangs, though somewhat loosely, about the minds of men.[79] At the same time, by superseding the geometry of the ancients, he aided in weakening that inordinate respect with which antiquity was then regarded. In another matter, still more important, he displayed the same spirit, and met with the same success. With such energy did he attack the influence, or rather the tyranny of Aristotle, that although the opinions of that philosopher were intimately interwoven with the Christian theology, his authority was entirely overthrown by Descartes; and with it there perished those scholastic prejudices, for which Aristotle, indeed, was not responsible, but which, under the shelter of his

[79] Dr Whewell, for instance, says, that we must reject final causes in the inorganic sciences, but must recognize them in the organic ones; which, in other words, simply means, that we know less of the organic world than of the inorganic, and that because we know less, we are to believe more; for here, as everywhere else, the smaller the science the greater the superstition. *Whewell's Philos. of the Inductive Sciences*, 8vo, 1847, vol. i. pp. 620, 627, 628; and his *Hist. of the Induc. Sciences*, vol. iii. pp. 430, 431. If the question were to be decided by authority, it would be enough to appeal to Bacon and Descartes, the two greatest writers on the philosophy of method in the seventeenth century, and to Auguste Comte, who is admitted by the few persons who have mastered his *Philosophie Positive*, to be the greatest in our own time. These profound and comprehensive thinkers have all rejected the study of final causes, which, as they have clearly seen, is a theological invasion of scientific rights.

mighty name, had, during several centuries, perplexed the understandings of men, and retarded the progress of their knowledge.[80]

These were the principle services rendered to civilization by one of the greatest men Europe has ever produced. The analogy between him and Richelieu is very striking, and is as complete as their relative positions would allow. The same disregard of ancient notions, the same contempt for theological interests, the same indifference to tradition, the same determination to prefer the present to the past: in a word, the same essentially modern spirit, is seen alike in the writings of Descartes, and in the actions of Richelieu. What the first was to philosophy, that was the other to politics. But, while acknowledging the merits of these eminent men, it behoves us to remember that their success was the result, not only of their own abilities, but likewise of the general temper of their time. The nature of their labours depended on themselves; the way in which their labours were received, depended on their contemporaries. Had they lived in a more superstitious age, their views would have been disregarded, or, if noticed, would have been execrated as impious novelties. In the fifteenth, or early in the sixteenth century, the genius of Descartes and of Richelieu would have lacked the materials necessary to their work; their comprehensive minds would, in that state of society, have found no play; they would have awakened no sympathies; their bread would have been cast upon those waters which return it not again. And it would have been well for them if, in such a case, indifference were the only penalty with which they would be visited. It would have been well if they had not paid the forfeit

[80] Dr Brown (*Philosophy of the Mind*, Edinb. 1838, p. 172) calls Descartes "that illustrious rebel, who, in overthrowing the authority of Aristotle," &c. This, I need hardly say, refers to the habit of appealing to Aristotle as if he were infallible, and is very different from that respect which is naturally felt for a man who was probably the greatest of all the ancient thinkers.

incurred by many of those illustrious thinkers who have vainly attempted to stem the torrent of human credulity. It would have been well if the church had not risen in her wrath,—if Richelieu had not been executed as a traitor, and Descartes burned as a heretic.

Indeed, the mere fact that two such men, occupying so conspicuous a place before the public eye, and enforcing views so obnoxious to the interests of superstition, should have lived without serious danger, and then have died peaceably in their beds,—the mere fact that this should have happened, is a decisive proof of the progress which, during fifty years, had been made by the French nation. With such rapidity were the prejudices of that great people dying away, that opinions utterly subversive of theological traditions, and fatal to the whole scheme of ecclesiastical power, were with impunity advocated by Descartes, and put in practice by Richelieu. It was now clearly seen, that the two foremost men of their time could, with little or no risk, openly propagate ideas which half a century before, it would have been accounted dangerous even for the most obscure man to whisper in the privacy of his own chamber.

Nor are the causes of this impunity difficult to understand. They are to be found in the diffusion of that sceptical spirit, by which, in France as well as in England, toleration was preceded. For, without entering into details which would be too long for the limits of this Introduction, it is enough to say, that French literature generally was, at this period, distinguished by a freedom and a boldness of inquiry, of which, England alone excepted, no example had then been seen in Europe. The generation which had listened to the teachings of Montaigne and of Charron, was now succeeded by another generation, the disciples, indeed, of those eminent men, but disciples who far outstripped their masters. The result was, that, during the thirty or forty years which preceded the power of Louis XIV.,[81]

[81] That is, in 1661, when Louis XIV. first assumed the government.

there was not to be found a single Frenchman of note who did not share in the general feeling,—not one who did not attack some ancient dogma, or sap the foundation of some old opinion. This fearless temper was the characteristic of the ablest writers of that time; but what is still more observable is, that the movement spread with such rapidity as to include in its action even those parts of society which are invariably the last to be affected by it. That spirit of doubt, which is the necessary precursor of all inquiry, and therefore of all solid improvement, owes its origin to the most thinking and intellectual parts of society, and is naturally opposed by the other parts: opposed by the nobles, because it is dangerous to their interests; opposed by the uneducated, because it attacks their prejudices. This is one of the reasons why neither the highest nor the lowest ranks are fit to conduct the government of a civilized country; since both of them, notwithstanding individual exceptions, are, in the aggregate, averse to those reforms which the exigencies of an advancing nation constantly require. But in France, before the middle of the seventeenth century, even these classes began to participate in the great progress; so that, not only among thoughtful men, but likewise among the ignorant and the frivolous, there was seen that inquisitive and incredulous disposition, which, whatever may be said against it, has at least this peculiarity, that, in its absence, there is no instance to be found of the establishment of those principles of toleration and of liberty, which have only been recognized with infinite difficulty, and after many a hard-fought battle against prejudices whose inveterate tenacity might almost cause them to be deemed a part of the original constitution of the human mind.[82]

[82] The increase of incredulity was so remarkable, as to give rise to a ridiculous assertion, "qu'il y avoit plus de 50,000 Athées dans Paris vers l'an 1623." *Baillet, Jugemens des Savans*, Paris, 1722, 4to, vol. i. p. 185. Baillet has no difficulty in rejecting this preposterous statement (which is also noticed in *Coleridge's Literary Remains*, vol. i. p. 305; where, however, there

It is no wonder if, under these circumstances, the speculations of Descartes and the actions of Richelieu should have met with great success. The system of Descartes exercised immense influence, and soon pervaded nearly every branch of knowledge.[83] The policy of Richelieu was so firmly established, that it was continued without the slightest difficulty by his immediate successor: nor was any attempt made to reverse it until that forcible and artificial reaction which, under Louis XIV., was fatal, for a time, to every sort of civil and religious liberty. The history of that reaction, and the way in which, by a counter-reaction, the French Revolution was prepared, will be related in the subsequent chapters of this volume; at present we will resume the thread of those events which took place in France before Louis XIV. assumed the government.

A few months after the death of Richelieu, Louis XIII. also died, and the crown was inherited by Louis XIV., who was then a child, and who for many years had no influence in public affairs. During his minority, the government was administered, avowedly by his mother, but in reality by Mazarin; a man who, though in every point inferior to Richelieu, had imbibed something of his spirit, and who, so far as he was able, adopted the policy of that great statesman, to whom he owed his promotion. He, influenced partly by the example of his predecessor, partly by his own character, and partly by the spirit of his age, showed no desire to persecute the Protestants, or to disturb them in any of the rights they then exercised.[84] His first act was to confirm the Edict

is apparently a confusion between two different periods); but the spread of scepticism among the upper ranks and courtiers, during the reign of Louis XIII. and the minority of Louis XIV., is attested by a great variety of evidence.

[83] Volumes might be written on the influence of Descartes, which was seen, not only in subjects immediately connected with his philosophy, but even in those apparently remote from it.

[84] That he did not persecute the Protestants is grudgingly confessed in *Felice's Hist. of the Protestants of France*, p. 292.

of Nantes;[85] and, towards the close of his life, he even allowed the Protestants again to hold those synods which their own violence had been the means of interrupting.[86] Between the death of Richelieu and the accession to power of Louis XIV., there elapsed a period of nearly twenty years, during which Mazarin, with the exception of a few intervals, was at the head of the state; and in the whole of that time I have found no instance of any Frenchman being punished for his religion. Indeed, the new government, so far from protecting the church by repressing heresy, displayed that indifference to ecclesiastical interests which was now becoming a settled maxim of French policy. Richelieu, as we have already seen, had taken the bold step of placing Protestants at the head of the royal armies; and this he had done upon the simple principle that one of the first duties of a statesman is to employ for the benefit of the country the ablest men he can find, without regard to their theological opinions, with which, as he well knew, no government has any concern. But Louis XIII., whose personal feelings were always opposed to the enlightened measures of his great minister, was offended by this magnanimous disregard of ancient prejudices; his piety was shocked at the idea of Catholic soldiers being commanded by heretics; and, as we are assured by a well-informed contemporary, he determined to put an end to this scandal to the church, and, for the future, allow no Protestant to receive the staff of marshal of France. Whether the king, if he had lived, would have carried his point, is doubtful;[87] but what is certain is, that, only four months after his death, this appointment of

[85] He confirmed it in July 1643.

[86] In 1659, there was assembled the Synod of Loudun, the moderator of which said, "It is now fifteen years since we had a national synod." *Quick's Synodicon in Gallia*, vol. ii. p. 517.

[87] He was so uneasy about the sin he had committed, that just before his death he entreated the Protestant marshals to change their creed.

marshal was bestowed upon Turenne, the most able of all the Protestant generals.[88] And in the very next year, Gassion, another Protestant, was raised to the same dignity, thus affording the strange spectacle of the highest military power in a great Catholic country wielded by two men against whose religion the church was never weary of directing her anathemas.[89] In a similar spirit, Mazarin, on mere grounds of political expediency, concluded an intimate alliance with Cromwell; an usurper who, in the opinion of the theologians, was doomed to perdition, since he was soiled by the triple crime of rebellion, of heresy, and of regicide.[90] Finally, one of the last acts of this pupil of Richelieu's was to sign the celebrated treaty of the Pyrenees, by which ecclesiastical interests were seriously weakened, and great injury inflicted on him who was still considered to be the head of the church.

But, the circumstance for which the administration of Mazarin is most remarkable, is the breaking out of that great civil war called the Fronde, in which the people attempted to carry into politics the insubordinate spirit which had already displayed itself in literature and in religion. Here we cannot fail to note the similarity between this struggle and that which, at the same time, was taking place in England. It would, indeed, be far from accurate to say that the two events were the counterpart of each other; but there can be no doubt that the analogy between them is very striking. In both countries, the civil war was the first popular expression of what had hitherto been rather a speculative, and, so to say, a literary scepticism.

[88] Louis XIII. died in May 1643, and Turenne was made marshal in the September following.

[89] Sismondi (*Hist. des Français*, vol. xxiv. p. 65) makes the appointment of Gassion in 1644; according to Montglat (*Mémoires*, vol. i. p. 437) it was at the end of 1643.

[90] The Pope especially was offended by this alliance (*Ranke, die Päpste*, vol. iii. p. 158, compared with *Vaughan's Cromwell*, vol. i. p. 343, vol. ii. p. 124); and, judging from the language of Clarendon, the orthodox party in England was irritated by it. *Clarendon's Hist. of the Rebellion*, pp. 699, 700.

In both countries, incredulity was followed by rebellion, and the abasement of the clergy preceded the humiliation of the crown; for Richelieu was to the French church what Elizabeth had been to the English church. In both countries, there now first arose that great product of civilization, a free press, which showed its liberty by pouring forth those fearless and innumerable works which mark the activity of the age.[91] In both countries, the struggle was between retrogression and progress; between those who clung to tradition, and those who longed for innovation; while, in both, the contest assumed the external form of a war between king and parliament, the king being the organ of the past, the parliament the representative of the present. And, not to mention inferior similarities, there was one other point of vast importance in which these two great events coincide. This is, that both of them were eminently secular, and arose from the desire, not of propagating religious opinions, but of securing civil liberty. The temporal character of the English rebellion I have already noticed, and, indeed, it must be obvious to whoever has studied the evidence in its original sources. In France, not only do we find the same result, but we can even mark the stages of the progress. In the middle of the sixteenth century, and immediately after the death of Henry III., the French civil wars were caused by religious disputes, and were carried on with the fervour of a crusade. Early in the seventeenth century, hostilities again broke out; but though the efforts of the government were directed against the Protestants, this was not because they were heretics, but because they were rebels: the object

[91] In England, the Long Parliament succeeded to the licensing authority of the Star-chamber (*Blackstone's Commentaries*, vol. iv. p. 152); but it is evident from the literature of that time, that for a considerable period the power was in reality in abeyance. Both parties attacked each other freely through the press; and it is said, that between the breaking out of the civil war and the restoration, there were published from 30,000 to 50,000 pamphlets.

being, not to punish an opinion, but to control a faction. This was the first great stage in the history of toleration; and it was accomplished, as we have already seen, during the reign of Louis XIII. That generation passing away, there arose, in the next age, the wars of the Fronde; and in this, which may be called the second stage of the French intellect, the alteration was still more remarkable. For, in the meantime, the principles of the great sceptical thinkers, from Montaigne to Descartes, had produced their natural fruit, and, becoming diffused among the educated classes, had influenced, as they always will do, not only those by whom they were received, but also those by whom they were rejected. Indeed, a mere knowledge of the fact, that the most eminent men have thrown doubt on the popular opinions of an age, can never fail in some degree, to disturb the convictions even of those by whom the doubts are ridiculed.[92] In such cases, none are entirely safe: the firmest belief is apt to become slightly unsettled; those who outwardly preserve the appearance of orthodoxy, often unconsciously waver; they cannot entirely resist the influence of superior minds, nor can they always avoid an unwelcome suspicion, that when ability is on one side, and ignorance on the other, it is barely possible that the ability may be right, and the ignorance may be wrong.

Thus it fell out in France. In that country, as in every other, when theological convictions diminished, theological animosities subsided. Formerly religion had been the cause of war, and had also been the pretext under which it was conducted. Then there came a time when it ceased to be the cause; but so slow is the progress of society, that it was still found necessary to set it up as the pretext. Finally, there came the

[92] Dugald Stewart (*Philos. of the Mind*, vol. i. p. 357) says, "Nothing can be more just than the observation of Fontenelle, that 'the number of those who believe in a system already established in the world, does not, in the least, add to its credibility; but that the number of those who doubt of it, has a tendency to diminish it.'"

great days of the Fronde, in which it was neither cause nor pretext;[93] and in which there was seen, for the first time in France, an arduous struggle by human beings avowedly for human purposes; a war waged by men who sought, not to enforce their opinions, but to increase their liberty. And, as if to make this change still more striking, the most eminent leader of the insurgents was the Cardinal de Retz; a man of vast ability, but whose contempt for his profession was notorious, and of whom a great historian has said, "he is the first bishop in France who carried on a civil war without making religion the pretence."

We have thus seen that, during the seventy years which succeeded the accession of Henry IV., the French intellect developed itself in a manner remarkably similar to that which took place in England. We have seen that, in both countries, the mind, according to the natural conditions of its growth, first doubted what it had long believed, and then tolerated what it had long hated. That this was by no means an accidental or capricious combination, is evident, not only from general arguments, and from the analogy of the two countries, but also from another circumstance of great interest. This is, that the order of events, and as it were their relative proportions, were the same, not only in reference to the increase of toleration, but also in reference to the increase of literature and science. In both countries, the progress of knowledge bore the same ratio to the decline of ecclesiastical influence, although they manifested that ratio at different periods. We had begun to throw off our superstitions somewhat earlier than the French were able to do; and thus, being the first in the field, we anticipated that great people in producing a secular literature. Whoever will take the pains to compare the growth of the French and English minds will see that, in all the most important departments, we were the first, I do not say in merit,

[93] Even the people said that it was unimportant whether or not a man died a Protestant; but that if he were a partizan of Mazarin, he was sure to be damned. *Lenet*, vol. i. p. 434.

but in the order of time. In prose, in poetry, and in every branch of intellectual excellence, it will be found, on comparison, that we were before the French nearly a whole generation; and that, chronologically, the same proportion was preserved as that between Bacon and Descartes, Hooker and Pascal,[94] Shakespeare and Corneille, Massinger and Racine, Ben Jonson and Molière, Harvey and Pecquet. These eminent men were all justly celebrated in their respective countries, and it would perhaps be invidious to institute a comparison between them. But what we have here to observe is, that among those who cultivated the same department, the greatest Englishman, in every instance, preceded the greatest Frenchman by many years. This difference, running as it does through all the leading topics, is far too regular to be considered accidental. And as few Englishmen of the present day will be so presumptuous as to suppose that we possess any native and inherent superiority over the French, it is evident that there must be some marked peculiarity in which the two countries differed, and which has produced this difference, not in their knowledge, but in the time at which their knowledge appeared. Nor does the discovery of this peculiarity require much penetration. For, notwithstanding that the French were more tardy than the English, still, when the development had fairly begun, the antecedents of its success were among both people precisely the same. It is, therefore, clear, according to the commonest principles of inductive reasoning, that the lateness of the development must be owing to the lateness of the antecedent. It is clear that the French knew less because they believed more. It is clear that their progress was checked by the prevalence of those feelings which are fatal to all knowledge, because, looking on antiquity as the sole receptacle of wisdom,

[94] Hooker and Pascal may properly be classed together as the two most sublime theological writers either country has produced, for Bossuet is as inferior to Pascal as Jeremy Taylor is inferior to Hooker.

they degrade the present in order that they may exaggerate the past: feelings which destroy the prospects of man, stifle his hopes, damp his curiosity, chill his energies, impair his judgment, and, under pretence of humbling the pride of his reason, seek to throw him back into that more than midnight darkness from which his reason alone has enabled him to emerge.

The analogy thus existing between France and England is, indeed, very striking, and, so far as we have yet considered it, seems complete in all its parts. To sum up the similarities in a few words, it may be said that both countries followed the same order of development in their scepticism, in their knowledge, in their literature, and in their toleration. In both countries there broke out a civil war at the same time, for the same object, and, in many respects, under the same circumstances. In both, the insurgents, at first triumphant, were afterwards defeated; and the rebellion being put down, the governments of the two nations were fully restored almost at the same moment: in 1660 by Charles II.; in 1661 by Louis XIV.[95] But there the similarity stopped. At this point there began a marked divergence between the two countries,[96] which continued to increase for more than a century, until it ended in England by the consolidation of the national prosperity, in France by a revolution more sanguinary, more complete, and more destructive, than any the world has ever seen. This difference between the fortunes of such great and civilized nations is so remarkable, that a knowledge of its causes becomes essential to a right understanding of European history, and will be found to throw considerable light on other

[95] Mazarin, until his death in 1661, exercised complete authority over Louis. The pompous manner in which, directly after the death of Mazarin, the king assumed the government, is related by Brienne, who was present. *Mém. de Brienne*, vol. ii. pp. 154-158.

[96] By this I mean, that the divergence now first became clear to every observer; but the origin of the divergence dates from a much earlier period, as we shall see in the next chapter.

events not immediately connected with it. Besides this, such an inquiry, independently of its scientific interest, will have a high practical value. It will show, what men seem only recently to have begun to understand, that in politics, no certain principles having yet been discovered, the first conditions of success are compromise, barter, expediency, and concession. It will show the utter helplessness even of the ablest rulers, when they try to meet new emergencies by old maxims. It will show the intimate connexion between knowledge and liberty; between an increasing civilization and an advancing democracy. It will show that, for a progressive nation, there is required a progressive polity; that, within certain limits, innovation is the sole ground of security; that no institution can withstand the flux and movements of society, unless it not only repairs its structure, but also widens its entrance; and that, even in a material point of view, no country can long remain either prosperous or safe, in which the people are not gradually extending their power, enlarging their privileges, and, so to say, incorporating themselves with the functions of the state.

The tranquillity of England, and her freedom from civil war, are to be ascribed to the recognition of these great truths;[97] while the neglect of them has entailed upon other countries the most woeful calamities. On this account, therefore, if on no other, it becomes interesting to ascertain how it was that the two nations we have been comparing should, in regard to these truths, have adopted views diametrically opposite, although, in other matters, their opinions, as we have already seen, were very similar. Or, to state the question in other words, we have to inquire how it was

[97] That is to say, their practical recognition; theoretically, they are still denied by innumerable politicians, who, nevertheless, assist in carrying them into effect, fondly hoping that each innovation will be the last, and enticing men into reform under the pretext that by each change they are returning to the spirit of the ancient British constitution.

that the French, after pursuing precisely the same course as the English, in their knowledge, in their scepticism, and in their toleration, should have stopped short in their politics; how it was, that their minds, which had effected such great things, should, nevertheless, have been so unprepared for liberty, that, in spite of the heroic efforts of the Fronde, they not only fell under the despotism of Louis XIV., but never even cared to resist it; and, at length, becoming slaves in their souls as well as in their bodies, they grew proud of a condition which the meanest Englishman would have spurned as an intolerable bondage.

The cause of this difference is to be sought in the existence of that spirit of protection which is so dangerous and yet so plausible, that it forms the most serious obstacle with which advancing civilization has to contend. This, which may truly be called an evil spirit, has always been far stronger in France than in England. Indeed, among the French, it continues, even to the present day, to produce the most mischievous results. It is, as I shall hereafter point out, intimately connected with that love of centralization which appears in the machinery of their government, and in the spirit of their literature. It is this which induces them to retain restrictions by which their trade has long been troubled, and to preserve monopolies which, in our country, a freer system has effectually destroyed. It is this which causes them to interfere with the natural relation between producers and consumers; to force into existence manufactures which otherwise would never arise, and which, for that very reason, are not required; to disturb the ordinary march of industry, and, under pretence of protecting their native labourers, diminish the produce of labour by diverting it from those profitable channels into which its own instincts always compel it to flow.

When the protective principle is carried into trade, these are its inevitable results. When it is carried

into politics, there is formed what is called a paternal government, in which supreme power is vested in the sovereign, or in a few privileged classes. When it is carried into theology, it produces a powerful church, and a numerous clergy, who are supposed to be the necessary guardians of religion, and every opposition to whom is resented as an insult to the public morals. These are the marks by which protection may be recognized; and, from a very early period, they have displayed themselves in France much more clearly than in England. Without pretending to discover their precise origin, I will in the next chapter, endeavour to trace them back to a time sufficiently remote to explain some of the discrepancies which, in this respect, existed between the two countries.

Note to p. 71.—Descartes died in Sweden on a visit to Christina; so that, strictly speaking, there is an error in the text. But this does not affect the argument; because the works of Descartes, being eagerly read in France, and not being prohibited, we must suppose that his person would have been safe, had he remained in his own country. To burn a heretic is a more decisive step than to suppress a book; and as the French clergy were not strong enough to effect the latter, it is hardly likely that they could have accomplished the former.

CHAPTER II

History of the Protective Spirit, and Comparison of it in France and England.

When, towards the end of the fifth century, the Roman empire was broken up, there followed, as is well known, a long period of ignorance and of crime, in which even the ablest minds were immersed in the grossest superstitions. During these, which are rightly called the Dark Ages, the clergy were supreme: they ruled the consciences of the most despotic sovereigns, and they were respected as men of vast learning, because they alone were able to read and write; because they were the sole depositaries of those idle conceits of which European science then consisted; and because they preserved the legends of the saints and the lives of the fathers, from which, as it was believed, the teachings of divine wisdom might easily be gathered.

Such was the degradation of the European intellect for about five hundred years, during which the credulity of men reached a height unparalleled in the annals of ignorance. But at length the human reason, that divine spark which even the most corrupt society is unable to extinguish, began to display its power, and disperse the mists by which it was surrounded. Various circumstances, which it would be tedious here to discuss, caused this dispersion to take place at different times in different countries. However, speaking generally, we may say that it occurred in the tenth and eleventh centuries, and that by the

twelfth century there was no nation now called civilized, upon whom the light had not begun to dawn.

It is from this point that the first great divergence between the European nations took its rise. Before this time their superstition was so great and universal, that it would avail little to measure the degree of their relative darkness. Indeed, so low had they fallen, that, during the earlier period, the authority of the clergy was in many respects an advantage, as forming a barrier between the people and their rulers, and as supplying the sole instance of a class that even made an approach to intellectual pursuits. But, when the great movement took place, when the human reason began to rebel, the position of the clergy was suddenly changed. They had been friendly to reasoning as long as the reasoning was on their side. While they were the only guardians of knowledge, they were eager to promote its interests. Now, however, it was falling from their hands: it was becoming possessed by laymen: it was growing dangerous: it must be reduced to its proper dimensions. Then it was that there first became general the inquisitions, the imprisonments, the torturings, the burnings, and all the other contrivances by which the church vainly attempted to stem the tide that had turned against her.[98] From that moment there has been an unceasing struggle between these two great parties—the advocates of inquiry, and the advocates of belief; a struggle which, however it may be disguised, and under

[98] Early in the eleventh century the clergy first began systematically to repress independent inquiries by punishing men who attempted to think for themselves. As knowledge advanced, the opposition between inquiry and belief became more marked: the church redoubled her efforts, and at the end of the twelfth century the popes first formally called on the secular power to punish heretics; and the earliest constitution addressed "inquisitoribus hæreticæ pravitatis" is one by Alexander IV. In 1222 a synod assembled at Oxford caused an apostate to be burned; and this, says Lingard (*Hist. of England*, vol. ii. p. 148), "is, I believe, the first instance of capital punishment in England on the ground of religion."

whatever forms it may appear, is at bottom always the same, and represents the opposite interests of reason and faith, of scepticism and credulity, of progress and reaction, of those who hope for the future, and of those who cling to the past.

This, then, is the great starting-point of modern civilization. From the moment that reason began, however faintly, to assert its supremacy, the improvement of every people has depended upon their obedience to its dictates, and upon the success with which they have reduced to its standard the whole of their actions. To understand, therefore, the original divergence of France and England, we must seek it in the circumstances that took place when this, which may be called the great rebellion of the intellect, was first clearly seen.

If now, with a view to such inquiry, we examine the history of Europe, we shall find that just at this period there sprung up the feudal system; a vast scheme of polity, which, clumsy and imperfect as it was, supplied many of the wants of the rude people among whom it arose.[99] The connexion between it and the decline of the ecclesiastical spirit is very obvious. For, the feudal system was the first great secular plan that had been seen in Europe since the formation of the civil law: it was the first comprehensive attempt which had been

[99] Sir F. Palgrave (*English Commonwealth*, vol. ii. p. ccvi.) says, "It is generally admitted by the best authorities, that from about the eleventh century benefices acquired the name of fiefs or feuds:" and Robertson (*State of Europe*, note viii. in *Works*, p. 393) supposes that the word *feudum* does not occur before 1008. But according to M. Guizot (*Civilisation en France*, vol. iii. p. 238), "il apparaît, pour la première fois, dans une charte de Charles le Gros en 884." This is a question more curious than important; since whatever the origin of the word may be, it is certain that the thing did not, and could not, exist before the tenth century at the earliest: inasmuch as the extreme disorganization of society rendered so coercive an institution impossible. M. Guizot, in another work (*Essais sur l'Hist. de France*, p. 239, rightly says, "Au X^e^ siècle seulement, les rapports et les pouvoirs sociaux acquirent quelque fixité."

made, during more than four hundred years, to organize society according to temporal, not according to spiritual circumstances, the basis of the whole arrangement being merely the possession of land, and the performance of certain military and pecuniary services.

This was, no doubt, a great step in European civilization, because it set the first example of a large public polity in which the spiritual classes as such had no recognized place[100]; and hence there followed that struggle between feudality, and the church, which has been observed by several writers, but the origin of which has been strangely overlooked. What, however, we have now to notice is, that by the establishment of the feudal system, the spirit of protection, far from being destroyed, was probably not even weakened, but only assumed a new form. Instead of being spiritual, it became temporal. Instead of men looking up to the church, they looked up to the nobles. For, as a necessary consequence of this vast movement, or rather as a part of it, the great possessors of land were now being organized into an hereditary aristocracy.[101] In the tenth century, we find the first surnames:[102] by the eleventh century most of the great offices had become hereditary in the leading families: and in the twelfth century armorial bearings were invented, as well as other heraldic devices which long nourished the conceit

[100] According to the social and political arrangements from the fourth to the tenth century, the clergy were so eminently a class apart, that they were freed from "burdens of the state," and were not obliged to engage in military services unless they thought proper to do so. But under the feudal system this immunity was lost; and in regard to performing services no separation of classes was admitted. "After the feudal polity became established, we do not find that there was any dispensation for ecclesiastical fiefs." *Hallam's Supplemental Notes*, p. 120.

[101] The great change of turning life-possessions of land into hereditary possessions, began late in the ninth century, being initiated in France by a capitulary of Charles the Bald, in 877.

[102] That surnames first arose in the tenth century, is stated by the most competent authorities.

of the nobles, and were valued by their descendants as marks of that superiority of birth, to which, during many ages, all other superiority was considered subordinate.

Such was the beginning of the European aristocracy, in the sense in which that word is commonly used. With the consolidation of its power, feudality was made, in reference to the organization of society, the successor of the church ;[103] and the nobles, becoming hereditary, gradually displaced in government, and in the general functions of authority, the clergy, among whom the opposite principle of celibacy was now firmly established.[104] It is, therefore, evident, that an inquiry into the origin of the modern protective spirit does, in a great measure, resolve itself into an inquiry into the origin of the aristocratic power ; since that power was the exponent, and, as it were, the cover, under which the spirit displayed itself. This, as we shall hereafter see, is likewise connected with the great religious rebellion of the sixteenth century ; the success of which mainly depended on the weakness of the protective principle that opposed it. But, reserving this for future consideration, I will now endeavour to trace a few of the circumstances which gave the aristocracy more power in France than in England, and thus accustomed the French to a closer and more constant obedience, and infused into them a more reverential spirit than that which was usual in our country.

Soon after the middle of the eleventh century, and therefore while the aristocracy was in the process of formation, England was conquered by the Duke of

[103] In our country, one fact may be mentioned illustrative of the earliest encroachments of laymen : namely, that, before the twelfth century, we find no instance in England of the great seal being intrusted "to the keeping of a layman." *Campbell's Chancellors*, vol. i. p. 61.

[104] Celibacy, on account of its supposed ascetic tendency, was advocated, and in some countries was enforced, at an early period ; but the first general and decisive movement in its favour was in the middle of the eleventh century, before which time it was a speculative doctrine constantly disobeyed.

Normandy, who naturally introduced the polity existing in his own country. But, in his hands, it underwent a modification suitable to the new circumstances in which he was placed. He, being in a foreign country, the general of a successful army composed partly of mercenaries, was able to dispense with some of those feudal usages which were customary in France. The great Norman lords, thrown as strangers into the midst of a hostile population, were glad to accept estates from the crown on almost any terms that would guarantee their own security. Of this, William naturally availed himself. For, by granting baronies on conditions favourable to the crown, he prevented the barons from possessing that power which they exercised in France, and which, but for this, they would have exercised in England. The result was, that the most powerful of our nobles became amenable to the law, or, at all events, to the authority of the king.[105] Indeed, to such an extent was this carried, that William, shortly before his death, obliged all the landowners to render their fealty to him; thus entirely neglecting that peculiarity of feudalism, according to which each vassal was separately dependent on his own lord.

But in France, the course of affairs was very different. In that country, the great nobles held their lands, not so much by grant, as by prescription. A character of antiquity was thus thrown over their rights; which, when added to the weakness of the crown, enabled them to exercise on their own estates all the functions of independent sovereigns. Even when they received their first great check, under Philip Augustus, they, in his reign, and indeed long after, wielded a power quite unknown in England. Thus, to give only two instances: the right of coining money, which has always been regarded as an attribute of sovereignty, was never allowed in England, even to the greatest

[105] The same policy of reducing the nobles was followed up by Henry II., who destroyed the baronial castles. *Turner*, vol. iv. p. 223.

nobles.[106] But in France it was exercised by many persons independently of the crown, and was not abrogated until the sixteenth century. A similar remark holds good of what was called the right of private war; by virtue of which, the nobles were allowed to attack each other, and disturb the peace of the country with the prosecution of their private feuds. In England, the aristocracy were never strong enough to have this admitted as a right, though they too often exercised it as a practice. But in France it became a part of the established law; it was incorporated into the text-books of feudalism, and it is distinctly recognized by Louis IX. and Philip the Fair—two kings of considerable energy, who did everything in their power to curtail the enormous authority of the nobles.

Out of this difference between the aristocratic power of France and England, there followed many consequences of great importance. In our country the nobles, being too feeble to contend with the crown, were compelled, in self-defence, to ally themselves with the people.[107] About a hundred years after the Conquest, the Normans and Saxons amalgamated; and both parties united against the king, in order to uphold their common rights.[108] The Magna Charta,

[106] "No subjects ever enjoyed the right of coining silver in England without the royal stamp and superintendence; a remarkable proof of the restraint in which the feudal aristocracy was always held in this country." *Hallam's Middle Ages*, vol. i. p. 154.

[107] Sir Francis Palgrave (in his *Rise and Progress of the English Commonwealth*, vol. i. pp. 51-55) has attempted to estimate the results produced by the Norman Conquest; but he omits to notice this, which was the most important consequence of all.

[108] In regard to the general question of the amalgamation of races, we have two distinct kinds of evidence:

1st, Towards the end of the twelfth century, a new language began to be formed by blending Norman with Saxon; and English literature, properly so called, dates from the commencement of the thirteenth century.

2d, Before the thirteenth century had passed away, the difference of dress, which in that state of society would survive many other differences, was no longer observed, and the

which John was forced to yield, contained concessions to the aristocracy; but its most important stipulations were those in favour of "all classes of freemen."[109] Within half a century, fresh contests broke out; the barons were again associated with the people, and again there followed the same results — the extension of popular privileges being each time the condition and the consequence of this singular alliance. In the same way, when the Earl of Leicester raised a rebellion against Henry III., he found his own party too weak to make head against the crown. He, therefore, applied to the people: and it is to him that our House of Commons owes its origin; since he, in 1264, set the first example of issuing writs to cities and boroughs; thus calling upon citizens and burgesses to take their place in what had hitherto been a parliament composed entirely of priests and nobles.[110]

distinctive peculiarities of Norman and Saxon attire had disappeared.

[109] "An equal distribution of civil rights to all classes of freemen forms the peculiar beauty of the charter." *Hallam's Middle Ages*, vol. ii. p. 108.

[110] "He is to be honoured as the founder of a representative system of government in this country." *Campbell's Chief Justices*, vol. i. p. 61. Some writers (see, for instance, *Dalrymple's Hist. of Feudal Property*, p. 332) suppose that burgesses were summoned before the reign of Henry III.: but this assertion is not only unsupported by evidence, but is in itself improbable; because, at an earlier period the citizens, though rapidly increasing in power, were hardly important enough to warrant such a step being taken. The best authorities are now agreed to refer the origin of the House of Commons to the period mentioned in the text. The notion of tracing this to the wittenagemot, is as absurd as finding the origin of juries in the system of compurgators; both of which were favourite errors in the seventeenth, and even in the eighteenth century. In regard to the wittenagemot, this idea still lingers among antiquaries; but, in regard to compurgators, even they have abandoned their old ground, and it is now well understood that trial by jury did not exist till long after the Conquest. There are few things in our history so irrational as the admiration expressed by a certain class of writers for the institutions of our barbarous Anglo-Saxon ancestors.

The English aristocracy being thus forced, by their own weakness, to rely on the people, it naturally followed, that the people imbibed that tone of independence, and that lofty bearing, of which our civil and political institutions are the consequence, rather than the cause. It is to this, and not to any fanciful peculiarity of race, that we owe the sturdy and enterprising spirit for which the inhabitants of this island have long been remarkable. It is this which has enabled us to baffle all the arts of oppression, and to maintain for centuries liberties which no other nation has ever possessed. And it is this which has fostered and upheld those great municipal privileges, which, whatever be their faults, have, at least, the invaluable merit of accustoming free men to the exercise of power, giving to citizens the management of their own city, and perpetuating the idea of independence, by preserving it in a living type, and by enlisting in its support the interests and affections of individual men.

But the habits of self-government which, under these circumstances, were cultivated in England, were, under opposite circumstances, neglected in France. The great French lords being too powerful to need the people, were unwilling to seek their alliance. The result was, that, amid a great variety of forms and names, society, was, in reality, only divided into two classes—the upper and the lower, the protectors and the protected. And, looking at the ferocity of the prevailing manners, it is not too much to say, that in France, under the feudal system, every man was either a tyrant or a slave. Indeed, in most instances, the two characters were combined in the same person. For, the practice of subinfeudation, which in our country was actively checked, became in France almost universal. By this, the great lords having granted lands on condition of fealty and other services to certain persons, these last subgranted them; that is, made them over on similar conditions to other persons, who had likewise the power of bestowing them on a fourth party, and so on

in an endless series ;[111] thus forming a long chain of dependence, and, as it were, organizing submission into a system. In England, on the other hand, such arrangements were so unsuited to the general state of affairs, that it is doubtful if they were ever carried on to any extent ; and, at all events, it is certain that, in the reign of Edward I., they were finally stopped by the statute known to lawyers as *Quia emptores*.

Thus early was there a great social divergence between France and England. The consequences of this were still more obvious when, in the fourteenth century, the feudal system rapidly decayed in both countries. For in England, the principle of protection being feeble, men were in some degree accustomed to self-government ; and they were able to hold fast by those great institutions which would have been ill adapted to the more obedient habits of the French people. Our municipal privileges, the rights of our yeomanry, and the security of our copyholders were, from the fourteenth to the seventeenth centuries, the three most important guarantees for the liberties of England.[112] In France such guarantees were impossible. The real division being between those who were noble, and those who were not noble, no room was left for the

[111] "Originally there was no limit to subinfeudation." *Brougham's Polit. Philos.* vol. i. p. 279.

[112] The history of the decay of that once most important class, the English yeomanry, is an interesting subject, and one for which I have collected considerable materials ; at present, I will only say, that its decline was first distinctly perceptible in the latter half of the seventeenth century, and was consummated by the rapidly-increasing power of the commercial and manufacturing classes early in the eighteenth century. After losing their influence their numbers naturally diminished, and they made way for other bodies of men, whose habits of mind were less prejudiced, and therefore better suited to that new state which society assumed in the last age. I mention this, because some writers regret the almost total destruction of the yeoman freeholders ; overlooking the fact that they are disappearing, not in consequence of any violent revolution or stretch of arbitrary power, but simply by the general march of affairs, society doing away with what it no longer requires.

establishment of intervening classes; but all were compelled to fall into one of these two great ranks. The French never had anything answering to our yeomanry; nor were copyholders recognized by their laws. And although they attempted to introduce into their country municipal institutions, all such efforts were futile; for, while they copied the forms of liberty, they lacked that bold and sturdy spirit by which alone liberty can be secured. They had, indeed, its image and superscription; but they wanted the sacred fire that warms the image into life. Everything else they possessed. The show and appliances of freedom were there. Charters were granted to their towns, and privileges conceded to their magistrates. All, however, was useless. For it is not by the wax and parchment of lawyers that the independence of men can be preserved. Such things are the mere externals; they set off liberty to advantage; they are as its dress and paraphernalia, its holiday-suit in times of peace and quiet. But, when the evil days set in, when the invasions of despotism have begun, liberty will be retained, not by those who can show the oldest deeds and the largest charters, but by those who have been most inured to habits of independence, most accustomed to think and act for themselves, and most regardless of that insidious protection which the upper classes have always been so ready to bestow, that, in many countries, they have now left nothing worth the trouble to protect.

And so it was in France. The towns, with few exceptions, fell at the first shock; and the citizens lost those municipal privileges which, not being grafted on the national character, it was found impossible to preserve. In the same way, in our country, power naturally, and by the mere force of the democratic movement, fell into the hands of the House of Commons, whose authority has ever since, notwithstanding occasional checks, continued to increase at the expense of the more aristocratic parts of the legislature. The only institution answering to this in France was the

States-General, which, however, had so little influence that, in the opinion of native historians, it was hardly to be called an institution at all. Indeed, the French were, by this time, so accustomed to the idea of protection, and to the subordination which that idea involves, that they were little inclined to uphold an establishment which, in their constitution, was the sole representative of the popular element. The result was that by the fourteenth century the liberties of Englishmen were secured; and, since then, their only concern has been to increase what they have already obtained. But, in that same century, in France, the protective spirit assumed a new form; the power of the aristocracy was, in a great measure, succeeded by the power of the crown; and there began that tendency to centralization which, having been pushed still further, first, under Louis XIV., and afterwards under Napoleon, has become the bane of the French people. For, by it the feudal ideas of superiority and submission have long survived that barbarous age to which alone they were suited. Indeed, by their transmigration, they seem to have gained fresh strength. In France, every thing is referred to one common centre, in which all civil functions are absorbed. All improvements of any importance, all schemes for bettering even the material condition of the people, must receive the sanction of government; the local authorities not being considered equal to such arduous tasks. In order that inferior magistrates may not abuse their power, no power is conferred upon them. The exercise of independent jurisdiction is almost unknown. Every thing that is done must be done at headquarters. The government is believed to see everything, know everything, and provide for everything. To enforce this monstrous monopoly, there has been contrived a machinery well worthy of the design. The entire country is covered by an immense array of officials,[113] who, in the regu-

[113] The number of civil functionaries in France, who are paid by the government to trouble the people, passes all belief,

larity of their hierarchy, and in the order of their descending series, form an admirable emblem of that feudal principle, which, ceasing to be territorial, has now become personal. In fact, the whole business of the state is conducted on the supposition that no man either knows his own interest or is fit to take care of himself. So paternal are the feelings of government, so eager for the welfare of its subjects, that it has drawn within its jurisdiction the most rare, as well as the most ordinary, actions of life. In order that the French may not make imprudent wills, it has limited the right of bequest; and, for fear that they should bequeath their property wrongly, it prevents them from bequeathing the greater part of it at all. In order that society may be protected by its police, it has directed that no one shall travel without a passport. And when men are actually travelling, they are met at every turn by the same interfering spirit, which, under pretence of protecting their persons, shackles their liberty. Into another matter, far more serious, the French have carried the same principle. Such is their anxiety to protect society against criminals, that, when an offender is placed at the bar of one of their courts, there is exhibited a spectacle, which it is no idle boast to say, we, in England, could not tolerate for a single hour. There is seen a great public magistrate, by whom the prisoner is about to be tried, examining him in order to ascertain his supposed guilt, re-examining him, cross-examining him, performing the duties, not of a judge, but of a prosecutor, and bringing to bear against the unhappy man all the authority of his

being estimated, at different periods during the present century, at from 138,000 to upwards of 800,000. *Tocqueville, de la Démocratie*, vol. i. p. 220; *Alison's Europe*, vol. xiv. pp. 127, 140; *Kay's Condition of the People*, vol. i. p. 272; *Laing's Notes*, 2d series, p. 185. Mr Laing, writing in 1850, says: "In France, at the expulsion of Louis-Philippe, the civil functionaries were stated to amount to 807,030 individuals."

judicial position, all his professional subtlety, all his experience, all the dexterity of his practised understanding. This is, perhaps, the most alarming of the many instances in which the tendencies of the French intellect are shown; because it supplies a machinery ready for the purposes of absolute power; because it brings the administration of justice into disrepute, by associating with it an idea of unfairness; and because it injures that calm and equable temper, which it is impossible fully to maintain under a system that makes a magistrate an advocate, and turns the judge into a partizan. But this, mischievous as it is, only forms part of a far larger scheme. For, to the method by which criminals are discovered, there is added an analogous method, by which crime is prevented. With this view, the people, even in their ordinary amusements, are watched and carefully superintended. Lest they should harm each other by some sudden indiscretion, precautions are taken similar to those with which a father might surround his children. In their fairs, at their theatres, their concerts, and their other places of public resort, there are always present soldiers, who are sent to see that no mischief is done, that there is no unnecessary crowding, that no one uses harsh language, that no one quarrels with his neighbour. Nor does the vigilance of government stop there. Even the education of children is brought under the control of the state, instead of being regulated by the judgment of masters or parents,[114] And the whole plan is executed with such energy, that, as the French while men are never let alone, just so while children they are

[114] "The government in France possesses control over all the education of the country, with the exception of the colleges for the education of the clergy, which are termed seminaries, and their subordinate institutions." *Report on the State of superior Education in France in* 1843, in *Journal of Statist. Soc.*, vol. vi. p. 304. On the steps taken during the power of Napoleon, see *Alison's Europe*, vol. viii. p. 203: "Nearly the whole education of the empire was brought effectually under the direction and appointment of government."

never left alone.[115] At the same time, it being reasonably supposed that adults thus kept in pupilage cannot be proper judges of their own food, the government has provided for this also. Its prying eye follows the butcher to the shambles, and the baker to the oven. By its paternal hand meat is examined lest it should be bad, and bread is weighed lest it should be light. In short, without multiplying instances, with which most readers must be familiar, it is enough to say that, in France, as in every country where the protective principle is active, the government has established a monopoly of the worst kind; a monopoly which comes home to the business and bosoms of men, follows them in their daily avocations, troubles them with its petty, meddling spirit, and, what is worse than all, diminishes their responsibility to themselves; thus depriving them of what is the only real education that most minds receive,—the constant necessity of providing for future contingencies, and the habit of grappling with the difficulties of life.

The consequence of all this has been, that the French, though a great and splendid people,—a people full of mettle, high spirited, abounding in knowledge, and perhaps less oppressed by superstition than any other in Europe,—have always been found unfit to exercise political power. Even when they have possessed it, they have never been able to combine permanence with liberty. One of these two elements has always been wanting. They have had free governments, which have not been stable. They have had stable governments, which have not been free. Owing to their fearless temper, they have rebelled, and no doubt will continue to rebel, against so evil a condition. But it does not need the tongue of a prophet to tell that, for at least some generations, all such efforts must be un-

[115] "Much attention is paid to the *surveillance* of pupils; it being a fundamental principle of French education, that children should never be left alone." *Report on general Education in France in* 1842, in *Journal of Statist. Soc.*, vol. v. p. 20.

successful. For men can never be free, unless they are educated to freedom. And this is not the education which is to be found in schools, or gained from books; but it is that which consists in self-discipline, in self-reliance, and in self-government. These, in England are matters of hereditary descent—traditional habits, which we imbibe in our youth, and which regulate us in the conduct of life. The old associations of the French all point in another direction. At the slightest difficulty, they call on the government for support. What with us is competition, with them is monopoly. That which we effect by private companies, they effect by public boards. They cannot cut a canal, or lay down a railroad without appealing to the government for aid. With them, the people look to the rulers; with us, the rulers look to the people. With them, the executive is the centre from which society radiates.[116] With us, society is the instigator, and the executive the organ. The difference in the result has corresponded with the difference in the process. We have been made fit for political power, by the long exercise of civil rights. They, neglecting the exercise, think they can at once begin with the power. We have always shown a determination to uphold our liberties, and, when the times are fitting, to increase them; and this we have done with a decency and a gravity natural to men to whom such subjects have long been familiar. But the French, always treated as children, are, in political matters, children still. And as they have handled the most weighty concerns in that gay and volatile spirit which adorns their lighter literature, it

[116] It is to the activity of this protective and centralizing spirit that we must ascribe, what a very great authority noticed thirty years ago, as "le défaut de spontanéité, qui caractérise les institutions de la France moderne." *Meyer, Instit. Judic.* vol. iv. p. 536. It is also this which, in literature and in science, makes them favour the establishment of academies; and it is probably to the same principle that their jurists owe their love of codification. All these are manifestations of an unwillingness to rely on the general march of affairs, and show an undue contempt for the unaided conclusions of private men.

is no wonder that they have failed in matters where the first condition of success is, that men should have been long accustomed to rely upon their own energies, and that before they try their skill in a political struggle, their resources should have been sharpened by that preliminary discipline, which a contest with the difficulties of civil life can never fail to impart.

These are among the considerations by which we must be guided, in estimating the probable destinies of the great countries of Europe. But what we are now rather concerned with is, to notice how the opposite tendencies of France and England long continued to be displayed in the condition and treatment of their aristocracy; and how from this there naturally followed some striking differences between the war conducted by the Fronde, and that waged by the Long Parliament.

When, in the fourteenth century, the authority of the French kings began rapidly to increase, the political influence of the nobility was, of course, correspondingly diminished. What, however, proves the extent to which their power had taken root, is the undoubted fact, that, notwithstanding this to them unfavourable circumstance, the people were never able to emancipate themselves from their control.[117] The relations the nobles bore to the throne became entirely changed; that which they bore to the people remained almost the same. In England, slavery, or villenage, as it is mildly termed, quickly diminished, and was extinct by the end of the sixteenth century.[118]

[117] Mably (*Observations*, vol. iii. pp. 154, 155, 352-362) has collected some striking evidence of the tyranny of the French nobles in the sixteenth century. In the eighteenth century, matters were somewhat better; but still the subordination was excessive, and the people were poor, ill-treated, and miserable.

[118] Mr Eccleston (*English Antiq.* p. 138) says, that in 1450 "villenage had almost passed away;" and according to Mr Thornton (*Over-Population*, p. 182), "Sir Thomas Smith, who wrote about the year 1550, declares that he had never met with any personal or domestic slaves; and that the villains, or predial slaves, still to be found, were so few, as to be scarcely

In France, it lingered on two hundred years later, and was only destroyed in that great Revolution by which the possessors of ill-gotten power were called to so sharp an account. Thus, too, until the last seventy years, the nobles were in France exempt from those onerous taxes which oppressed the people. The taille and corvée were heavy and grievous exactions, but they fell solely on men of ignoble birth; for the French aristocracy, being a high and chivalrous race, would have deemed it an insult to their illustrious descent, if they had been taxed to the same amount as those whom they despised as their inferiors.[119] Indeed, everything tended to nurture this general contempt. Everything was contrived to humble one class, and exalt the other. For the nobles there were reserved the best appointments in the church, and also the most important military posts. The privilege of entering the army as officers was confined to them; and they alone possessed a prescriptive right to belong to the cavalry. At the same time, and to avoid the least chance of confusion, an equal vigilance was displayed in the most trifling matters, and care was taken to prevent any similarity, even in the amusements of the two classes. To such a pitch was this brought, that in many parts of France, the right of having an aviary or a dovecote depended entirely on a man's rank; and no Frenchman, whatever his wealth might be, could keep pigeons, unless he were a noble; it being considered that these recreations were too elevated for persons of plebeian origin.

Circumstances like these are valuable, as evidence of

worth mentioning." Mr Hallam can find no "unequivocal testimony to the existence of villenage" later than 1574. *Middle Ages*, vol. ii. p. 312. If, however, my memory does not deceive me, I have met with evidence of it in the reign of James I., but I cannot recall the passage.

[119] So deeply rooted were these feelings, that even in 1789, the very year the Revolution broke out, it was deemed a great concession that the nobles "will consent, indeed, to equal taxation." See a letter from Jefferson to Jay, dated Paris, May 9th, 1789, in *Jefferson's Corresp.* vol. ii. pp. 462, 463.

36604 / 56

the state of society to which they belong; and their importance will become peculiarly obvious, when we compare them with the opposite condition of England.

For in England, neither these nor any similar distinctions have ever been known. The spirit of which our yeomanry, copyholders, and free burgesses were the representatives, proved far too strong for those protective and monopolizing principles, of which the aristocracy are the guardians in politics and the clergy in religion. And it is to the successful opposition made by these feelings of individual independence, that we owe our two greatest national acts—our Reformation in the sixteenth, and our Rebellion in the seventeenth century. Before, however, tracing the steps taken in these matters, there is one other point of view to which I wish to call attention, as a further illustration of the early and radical difference between France and England.

In the eleventh century there arose the celebrated institution of chivalry,[120] which was to manners what feudalism was to politics. This connexion is clear, not only from the testimony of contemporaries, but also from two general considerations. In the first place, chivalry was so highly aristocratic that no one could even receive knighthood unless he were of noble birth; and the preliminary education which was held to be necessary was carried on either in schools appointed by the nobles, or else in their own baronial castles.[121] In the second place, it was essentially a protective, and not at all a reforming institution. It was contrived with a view to remedy certain oppressions, as they successively arose; opposed in this

[120] M. Guizot (*Civilis. en France*, vol. iii. pp. 349-354) has attempted to trace it back to an earlier period; but he appears to have failed, though of course its germs may be easily found. According to some writers it originated in northern Europe; according to others in Arabia.

[121] "In some places there were schools appointed by the nobles of the country, but most frequently their own castles served." *Mills' Hist. of Chivalry*, vol. i. p. 31.

respect to the reforming spirit, which, being remedial rather than palliative, strikes at the root of an evil by humbling the class from which the evil proceeds, passing over individual cases in order to direct its attention to general causes. But chivalry, so far from doing this, was in fact a fusion of the aristocratic and the ecclesiastical forms of the protective spirit.[122] For, by introducing among the nobles the principle of knighthood, which, being personal, could never be bequeathed, it presented a point at which the ecclesiastical doctrine of celibacy could coalesce with the aristocratic doctrine of hereditary descent.[123] Out of this coalition sprung results of great moment. It is to this that Europe owes those orders, half aristocratic, half religious,[124] the Knights Templars, the Knights of St James, the Knights of St John, the Knights of St Michael: establishments which inflicted the greatest evils on society; and whose members, combining analogous vices, enlivened the superstition of monks with the debauchery of soldiers. As a natural consequence, an immense number of noble knights were solemnly pledged to "defend the church"; an ominous expression, the meaning of which is too well known to the readers of ecclesiastical history.[125] Thus it was that chivalry,

[122] This combination of knighthood and religious rites is often ascribed to the crusades; but there is good evidence that it took place a little earlier, and must be referred to the latter half of the eleventh century.

[123] The influence of this on the nobles is rather exaggerated by Mr Mills; who, on the other hand, has not noticed how the unhereditary element was favourable to the ecclesiastical spirit. *Mills' Hist. of Chivalry*, vol. i. pp. 15, 389, vol. ii. p. 169; a work interesting as an assemblage of facts, but almost useless as a philosophic estimate.

[124] "In their origin all the military orders, and most of the religious ones, were entirely aristocratic." *Mills' Hist. of Chivalry*, vol. i. p. 336.

[125] *Mills' Hist. of Chivalry*, vol. i. pp. 148, 333. About the year 1127, St Bernard wrote a discourse in favour of the Knights Templars, in which "he extols this order as a combination of monasticism and knighthood. . . . He describes the design of it as being to give the military order and knighthood a serious

uniting the hostile principles of celibacy and noble birth, became the incarnation of the spirit of the two classes to which those principles belonged. Whatever benefit, therefore, this institution may have conferred upon manners,[126] there can be no doubt that it actively contributed to keep men in a state of pupilage, and stopped the march of society by prolonging the term of its infancy.[127]

On this account it is evident, that whether we look at the immediate or at the remote tendency of chivalry, its strength and duration become a measure of the predominance of the protective spirit. If, with this view, we compare France and England, we shall find fresh proof of the early divergence of those countries. Tournaments, the first open expression of chivalry, are of French origin.[128] The greatest and, indeed, the only two great describers of chivalry are Joinville and Froissart, both of whom were Frenchmen. Bayard, that famous chevalier, who is always considered as the last representative of chivalry, was a Frenchman, and

Christian direction, and to convert war into something that God might approve." *Neander's Hist. of the Church*, vol. vii. p. 358. To this may be added, that, early in the thirteenth century, a chivalric association was formed, and afterwards merged in the Dominican order, called the Militia of Christ.

[126] Several writers ascribe to chivalry the merit of softening manners, and of increasing the influence of women. That there was such a tendency is, I think, indisputable; but it has been greatly exaggerated; and an author of considerable reading on these subjects says, "The rigid treatment shown to prisoners of war in ancient times strongly marks the ferocity and uncultivated manners of our ancestors, and that even to ladies of high rank; notwithstanding the homage said to have been paid to the fair sex in those days of chivalry." *Grose's Military Antiquities*, vol. ii. p. 114.

[127] Mr Hallam (*Middle Ages*, vol. ii. p. 464) says, "A third reproach may be made to the character of knighthood, that it widened the separation between the different classes of society, and confirmed that aristocratical spirit of high birth, by which the large mass of mankind were kept in unjust degradation."

[128] They were first introduced into England in the reign of Stephen. *Lingard's England*, vol. ii. p. 27.

was killed when fighting for Francis I. Nor was it until nearly forty years after his death that tournaments were finally abolished in France, the last one having been held in 1560.[129]

But in England, the protective spirit being much less active than in France, we should expect to find that chivalry, as its offspring, had less influence. And such was really the case. The honours that were paid to knights, and the social distinctions by which they were separated from the other classes, were never so great in our country as in France.[130] As men became more free, the little respect they had for such matters still further diminished. In the thirteenth century, and indeed in the very reign in which burgesses were first returned to parliament, the leading symbol of chivalry fell into such disrepute, that a law was passed obliging certain persons to accept that rank of knighthood which in other nations was one of the highest objects of ambition.[131] In the fourteenth century, this was followed by another blow, which deprived knighthood of its ex-

[129] Mr Hallam (*Middle Ages*, vol. ii. p. 470) says they were "entirely discontinued in France" in consequence of the death of Henry II.; but according to *Mills' Hist. of Chivalry*, vol. ii. p. 226, they lasted the next year; when another fatal accident occurred, and "tournaments ceased for ever."

[130] Mr Hallam (*Middle Ages*, vol. ii. p. 467) observes, that the knight, as compared with other classes, "was addressed by titles of more respect. *There was not, however, so much distinction in England as in France.*" The great honour paid to knights in France is noticed by Daniel (*Milice Française*, vol. i. pp. 128, 129); and Herder (*Ideen zur Geschichte*, vol. iv. pp. 266, 267) says, that in France chivalry flourished more than in any other country. The same remark is made by Sismondi (*Hist. des Français*, vol. iv. p. 198).

[131] The *Statutum des Militibus*, in 1307, was perhaps the first recognition of this. But we have positive evidence that compulsory knighthood existed in the reign of Henry III.; or at least that those who refused it were obliged to pay a fine. Lord Lyttleton, evidently puzzled, says, "Indeed it seems a deviation from the original principle of this institution. For one cannot but think it a very great inconsistency, that a dignity, which was deemed an accession of honour to kings themselves, should be forced upon any."

clusively military character; the custom having grown up in the reign of Edward III. of conferring it on the judges in the courts of law, thus turning a warlike title into a civil honour.[132] Finally, before the end of the fifteenth century, the spirit of chivalry, in France still at its height, was in our country extinct, and this mischievous institution had become a subject for ridicule even among the people themselves.[133] To these circumstances we may add two others, which seem worthy of observation. The first is, that the French, notwithstanding their many admirable qualities, have always been more remarkable for personal vanity than the English;[134] a peculiarity partly referrible to those chivalric traditions which even their occasional republics have been unable to destroy, and which makes them attach undue importance to external distinctions, by which I mean, not only dress and manners, but also medals, ribands, stars, crosses, and the like, which we, a prouder people, have never held in such high estimation. The other circumstance is, that duelling has from the beginning been more popular in France than in England; and as this is a custom which we owe to

[132] In *Mill's Hist. of Chivalry*, vol. ii. p. 154, it is said, that "the judges of the courts of law" were first knighted in the reign of Edward III.

[133] Mr Mills (*Hist. of Chivalry*, vol. ii. pp. 99, 100) has printed a curious extract from a lamentation over the destruction of chivalry, written in the reign of Edward IV.; but he has overlooked a still more singular instance. This is a popular ballad, written in the middle of the fifteenth century, and called the Tournament of Tottenham, in which the follies of chivalry are admirably ridiculed. According to Turner (*Hist. of England*, vol. vi. p. 363), "the ancient books of chivalry were laid aside" about the reign of Henry VI.

[134] This is not a mere popular opinion, but rests upon a large amount of evidence, supplied by competent and impartial observers. Addison, who was a lenient as well as an able judge, and who had lived much among the French, calls them "the vainest nation in the world." *Letter to Bishop Hough*, in *Aikin's Life of Addison*, vol. i. p. 90. Napoleon says, "vanity is the ruling principle of the French." *Alison's Hist. of Europe*, vol. vi. p. 25.

chivalry, the difference in this respect between the two countries supplies another link in that long chain of evidence by which we must estimate their national tendencies.[135]

The old associations, of which these facts are but the external expression, now continued to act with increasing vigour. In France, the protective spirit, carried into religion, was strong enough to resist the Reformation, and preserve to the clergy the forms, at least, of their ancient supremacy. In England, the pride of men, and their habits of self-reliance, enabled them to mature into a system what is called the right of private judgment, by which some of the most cherished traditions were eradicated; and this, as we have already seen, being quickly succeeded, first by scepticism, and then by toleration, prepared the way for that subordination of the church to the state, for which we are pre-eminent, and without a rival, among the nations of Europe. The very same tendency, acting in politics, displayed analogous results. Our ancestors found no difficulty in humbling the nobles, and reducing them to comparative insignificance. The wars of the Roses, by breaking up the leading families into two hostile factions, aided this movement; and, after the reign of Edward IV., there is no instance of any Englishman,

[135] The relation between chivalry and duelling has been noticed by several writers, and in France, where the chivalric spirit was not completely destroyed until the revolution, we find occasional traces of this connexion even in the reign of Louis XVI. See, for instance, in *Mém. de Lafayette*, vol. i. p. 86, a curious letter in regard to chivalry and duelling in 1778. In England there is, I believe, no evidence of even a single private duel being fought earlier than the sixteenth century, and there were not many till the latter half of Elizabeth's reign; but in France the custom arose early in the fifteenth century, and in the sixteenth it became usual for the seconds to fight as well as the principals. From that time the love of the French for duelling became quite a passion until the end of the eighteenth century, when the Revolution, or rather the circumstances which led to the Revolution, caused its comparative cessation.

even of the highest rank, venturing to carry on those private wars, by which, in other countries, the great lords still disturbed the peace of society.[136] When the civil contests subsided, the same spirit displayed itself in the policy of Henry VII. and Henry VIII. For, those princes, despots as they were, mainly oppressed the highest classes; and even Henry VIII., notwithstanding his barbarous cruelties, was loved by the people, to whom his reign was, on the whole, decidedly beneficial. Then there came the Reformation; which, being an uprising of the human mind, was essentially a rebellious movement, and thus increasing the insubordination of men, sowed, in the sixteenth century, the seeds of those great political revolutions which, in the seventeenth century, broke out in nearly every part of Europe. The connexion between these two revolutionary epochs is a subject full of interest; but, for the purpose of the present chapter, it will be sufficient to notice such events, during the latter half of the sixteenth century, as explain the sympathy between the ecclesiastical and aristocratic classes, and prove how the same circumstances that were fatal to the one, also prepared the way for the downfall of the other.

When Elizabeth ascended the throne of England, a large majority of the nobility were opposed to the Protestant religion. This we know from the most decisive evidence; and, even if we had no such evidence, a general acquaintance with human nature would induce us to suspect that such was the case. For, the aristocracy, by the very conditions of their existence, must, as a body, always be averse to innovation. And this, not only because by a change they have much to lose and little to gain, but because some of their most pleasurable emotions are connected with the past rather than with the present. In the collision of actual life, their vanity is sometimes offended by the assumptions of inferior men; it is frequently wounded by the successful competition of able

[136] "The last instance of a pitched battle between two powerful noblemen in England occurs in the reign of Edward IV." *Allen on the Prerogative*, p. 123.

men. These are mortifications to which, in the progress of society, their liability is constantly increasing. But the moment they turn to the past, they see in those good old times which are now gone by, many sources of consolation. There they find a period in which their glory is without a rival. When they look at their pedigrees, their quarterings, their escutcheons; when they think of the purity of their blood, and the antiquity of their ancestors,—they experience a comfort which ought amply to atone for any present inconvenience. The tendency of this is very obvious, and has shown itself in the history of every aristocracy the world has yet seen. Men who have worked themselves to so extravagant a pitch, as to believe that it is any honour to have one ancestor who came over with the Normans, and another ancestor who was present at the first invasion of Ireland,—men who have reached this ecstasy of the fancy are not disposed to stop there, but, by a process with which most minds are familiar, they generalize their view; and, even on matters not immediately connected with their fame, they acquire a habit of associating grandeur with antiquity, and of measuring value by age; thus transferring to the past an admiration which otherwise they might reserve for the present.

The connexion between these feelings and those which animate the clergy is very evident. What the nobles are to politics, that are the priests to religion. Both classes, constantly appealing to the voice of antiquity, rely much on tradition, and make great account of upholding established customs. Both take for granted that what is old is better than what is new; and that in former times there were means of discovering truths respecting government and theology which we, in these degenerate ages, no longer possess. And it may be added, that the similarity of their functions follows from the similarity of their principles. Both are eminently protective, stationary, or, as they are sometimes called, conservative. It is believed that the aristocracy guard the state against revolution, and that

the clergy keep the church from error. The first are the enemies of reformers; the others are the scourge of heretics.

It does not enter into the province of this Introduction to examine how far these principles are reasonable, or to inquire into the propriety of notions which suppose that, on certain subjects of immense importance, men are to remain stationary, while on all other subjects they are constantly advancing. But what I now rather wish to point out, is the manner in which, in the reign of Elizabeth, the two great conservative and protective classes were weakened by that vast movement, the Reformation, which, though completed in the sixteenth century, had been prepared by a long chain of intellectual antecedents.

Whatever the prejudices of some may suggest, it will be admitted by all unbiased judges, that the Protestant Reformation was neither more nor less than an open rebellion. Indeed, the mere mention of private judgment, on which it was avowedly based, is enough to substantiate this fact. To establish the right of private judgment, was to appeal from the church to individuals; it was to increase the play of each man's intellect; it was to test the opinions of the priesthood by the opinions of laymen; it was, in fact, a rising of the scholars against their teachers, of the ruled against their rulers. And although the Reformed clergy, so soon as they had organized themselves into a hierarchy, did undoubtedly abandon the great principle with which they started, and attempt to impose articles and canons of their own contrivance, still, this ought not to blind us to the merits of the Reformation itself. The tyranny of the Church of England, during the reign of Elizabeth, and still more during the reigns of her two successors, was but the natural consequence of that corruption which power always begets in those who wield it, and does not lessen the importance of the movement by which the power was originally obtained. For, men could not forget that, tried by the old theological theory, the Church of England was

a schismatic establishment, and could only defend itself from the charge of heresy by appealing to that private judgment, to the exercise of which it owed its existence, but of the rights of which its own proceedings were a constant infraction. It was evident, that if, in religious matters, private judgment were supreme, it became a high spiritual crime to issue any articles, or to take any measure, by which that judgment could be tied up; while, on the other hand, if the right of private judgment were not supreme, the Church of England was guilty of apostasy, inasmuch as its founders did, by virtue of the interpretation which their own private judgment made of the Bible, abandon tenets which they had hitherto held, stigmatize those tenets as idolatrous, and openly renounce their allegiance to what had for centuries been venerated as the catholic and apostolic church.

This was a simple alternative; which might, indeed, be kept out of sight, but could not be refined away, and most assuredly has never been forgotten. The memory of the great truth it conveys was preserved by the writings and teachings of the Puritans, and by those habits of thought natural to an inquisitive age. And when the fullness of time had come, it did not fail to bear its fruit. It continued slowly to fructify; and before the middle of the seventeenth century, its seed had quickened into a life, the energy of which nothing could withstand. That same right of private judgment, which the early Reformers had loudly proclaimed, was now pushed to an extent fatal to those who opposed it. This it was which, carried into politics, overturned the government, and, carried into religion, upset the church.[137] For, rebellion and

[137] Clarendon (*Hist. of the Rebellion*, p. 80), in a very angry spirit, but with perfect truth, notices (under the year 1640) the connexion between "a proud and venomous dislike against the discipline of the Church of England, and so by degrees (as the progress is very natural) an equal irreverence to the government of the state too." The Spanish government, perhaps, more than any other in Europe, has understood this

heresy are but different forms of the same disregard of tradition, the same bold and independent spirit. Both are of the nature of a protest made by modern ideas against old associations. They are as a struggle between the feelings of the present and the memory of the past. Without the exercise of private judgment, such a contest could never take place; the mere conception of it could not enter the minds of men, nor would they even dream of controlling, by their individual energy, those abuses to which all great societies are liable. It is, therefore, in the highest degree natural, that the exercise of this judgment should be opposed by those two powerful classes, who, from their position, their interests, and the habits of their mind, are more prone than any other to cherish antiquity, cleave to superannuated customs, and uphold institutions which, to use their favourite language, have been consecrated by the wisdom of their fathers.

From this point of view, we are able to see with great clearness the intimate connexion which, at the accession of Elizabeth, existed between the English nobles and the Catholic clergy. Notwithstanding many exceptions, an immense majority of both classes opposed the Reformation, because it was based on that right of private judgment, of which they, as the protectors of old opinions, were the natural antagonists. All this can excite no surprise; it was in the order of things, and strictly accordant with the spirit of those two great sections of society. Fortunately, however, for our country, the throne was now occupied by a sovereign who was equal to the emergency, and who, instead of yielding to the two classes, availed herself of the temper of the age to humble them. The manner in which this was effected by Elizabeth, in respect, first to the Catholic clergy, and afterwards to the Protestant

relation; and even so late as 1789, an edict of Charles IV declared, "qu'il y a crime d'hérésie dans tout ce qui tend, ou contribue, à propager les idées révolutionnaires." *Llorente, Hist. de l'Inquisition*, vol. ii. p. 130.

clergy,[138] forms one of the most interesting parts of our history; and in an account of the reign of the great queen, I hope to examine it at considerable length. At present, it will be sufficient to glance at her policy towards the nobles,—that other class with which the priesthood, by their interests, opinions, and associations, have always much in common.

Elizabeth, at her accession to the throne, finding that the ancient families adhered to the ancient religion, naturally called to her council advisers who were more likely to uphold the novelties on which the age was bent. She selected men who, being little burdened by past associations, were more inclined to favour present interests. The two Bacons, the two Cecils, Knollys, Sadler, Smith, Throgmorton, Walsingham, were the most eminent statesmen and diplomatists in her reign; but all of them were commoners; only one did she raise to the peerage; and they were certainly nowise remarkable, either for the rank of their immediate connexions, or for the celebrity of their remote ancestors. They, however, were recommended to Elizabeth by their great abilities, and by their determination to uphold a religion which the ancient aristocracy naturally opposed. And it is observable that, among the accusations which the Catholics brought against the queen, they taunted her, not only with forsaking the old religion, but also with neglecting the old nobility.[139]

[138] The general character of her policy towards the Protestant English bishops is summed up very fairly by Collier: though he, as a professional writer, is naturally displeased with her disregard for the heads of the church. *Collier's Eccles. Hist. of Great Britain*, vol. vii. pp. 257, 258, edit. Barham, 1840.

[139] One of the charges which, in 1588, Sixtus V. publicly brought against Elizabeth, was, that "she hath rejected and excluded the ancient nobility, and promoted to honour obscure people." *Butler's Mem. of the Catholics*, vol. ii. p. 4. Parsons also reproaches her with her low-born ministers, and says that she was influenced "by five persons in particular—all of them sprung from the earth—Bacon, Cecil, Dudley, Hatton and Walsingham." *Butler*, vol. ii. p. 31. Cardinal Allen taunted

Nor does it require much acquaintance with the history of the time to see the justice of this charge. Whatever explanation we may choose to give of the fact, it cannot be denied that, during the reign of Elizabeth, there was an open and constant opposition between the nobles and the executive government. The rebellion of 1569 was essentially an aristocratic movement; it was a rising of the great families of the north against what they considered the upstart and plebeian administration of the queen.[140] The bitterest enemy of Elizabeth was certainly Mary of Scotland; and the interests of Mary were publicly defended by

her with "disgracing the ancient nobility, erecting base and unworthy persons to all the civil and ecclesiastical dignities." *Dodd's Church History*, edit. Tierney, 1840, vol. iii. appendix no. xii. p. xlvi. The same influential writer, in his *Admonition*, said that she had injured England, "by great contempt and abasing of the ancient nobility, repelling them from due government, offices, and places of honour." *Allen's Admonition to the Nobility and People of England and Ireland*, 1588 (reprinted London, 1842), p. xv.

[140] To the philosophic historian this rebellion, though not sufficiently appreciated by ordinary writers, is a very important study, because it is the last attempt ever made by the great English families to establish their authority by force of arms. Mr Wright says, that probably all those who took a leading part in it "were allied by blood or intermarriage with the two families of the Percies and Neviles." *Wright's Elizabeth*, 1838, vol. i. p. xxxiv.; a valuable work.

But the most complete evidence we have respecting this struggle, consists of the collection of original documents published in 1840 by Sir C. Sharpe, under the title of *Memorials of the Rebellion of* 1569. They show very clearly the real nature of the outbreak. On 17th November 1569, Sir George Bowes writes, that the complaint of the insurgents was that "there was certaine counsellors cropen" (*i.e.* crept) "in aboute the prince, which had excluded the nobility from the prince," &c., *Memorials*, p. 42; and the editor's note says that this is one of the charges made in all the proclamations by the earls. Perhaps the most curious proof of how notorious the policy of Elizabeth had become, is contained in a friendly letter from Sussex to Cecil, dated 5th January 1569 (*Memorials*, p. 137), one paragraph of which begins, "Of late years few young noblemen have been employed in service."

the Duke of Norfolk, the Earl of Northumberland, the Earl of Westmoreland, and the Earl of Arundel; while there is reason to believe that her cause was secretly favoured by the Marquis of Northampton, the Earl of Pembroke, the Earl of Derby, the Earl of Cumberland, the Earl of Shrewsbury, and the Earl of Sussex.

The existence of this antagonism of interests could not escape the sagacity of the English government. Cecil, who was the most powerful of the ministers of Elizabeth, and who was at the head of affairs for forty years, made it part of his business to study the genealogies and material resources of the great families; and this he did, not out of idle curiosity, but in order to increase his control over them, or, as a great historian says, to let them know "that his eye was upon them."[141] The queen herself, though too fond of power, was by no means of a cruel disposition; but she seemed to delight in humbling the nobles. On them her hand fell heavily; and there is hardly to be found a single instance of her pardoning their offences, while she punished several of them for acts which would now be considered no offences at all. She was always unwilling to admit them to authority; and it is unquestionably true that, taking them as a class, they were during her long and prosperous reign treated with unusual disrespect. Indeed, so clearly marked was her policy, that when the ducal order became extinct, she refused to renew it; and a whole generation passed away to whom the name of duke was a mere matter of history, a point to be mooted by antiquaries, but with which the business of practical life had no concern.[142] Whatever

[141] *Hallam's Const. Hist.*, vol. i. p. 241; an interesting passage. Turner (*Hist. of England*, vol. xii. p. 237) says that Cecil "knew the tendency of the great lords to combine against the crown, that they might reinstate the peerage in the power from which the house of Tudor had depressed it."

[142] In 1572 the order of dukes became extinct; and was not revived till fifty years afterwards, when James I. made the miserable Villiers, duke of Buckingham. *Blackstone's Com-*

may be her other faults, she was on this subject always consistent. Although she evinced the greatest anxiety to surround the throne with men of ability, she cared little for those conventional distinctions by which the minds of ordinary sovereigns are greatly moved. She made no account of dignity of rank; she did not even care for purity of blood. She valued men neither for the splendour of their ancestry, nor for the length of their pedigrees, nor for the grandeur of their titles. Such questions she left for her degenerate successors, to the size of whose understandings they were admirably fitted. Our great queen regulated her conduct by another standard. Her large and powerful intellect, cultivated to its highest point by reflection and study, taught her the true measure of affairs, and enabled her to see, that to make a government flourish, its councillors must be men of ability and of virtue; but that if these two conditions are fulfilled, the nobles may be left to repose in the enjoyment of their leisure, unoppressed by those cares of the state for which, with a few brilliant exceptions, they are naturally disqualified by the number of their prejudices and by the frivolity of their pursuits.

After the death of Elizabeth, an attempt was made, first by James and then by Charles, to revive the power of the two great protective classes, the nobles and the clergy. But so admirably had the policy of Elizabeth been supported by the general temper of the age, that it was found impossible for the Stuarts to execute their mischievous plans. The exercise of private judgment, both in religion and in politics, had become so habitual that these princes were unable to subjugate it to their will. And as Charles I., with inconceivable blindness, and with an obstinacy even

mentaries, vol. i. p. 397. This evidently attracted attention; for Ben Jonson, in one of his comedies in 1616, mentions "the received heresy that England bears no dukes." *Jonson's Works*, edit. Gifford, 1816, vol. v. p. 47, where Gifford, not being aware of the extinction in 1572, has made an unsatisfactory note.

greater than that of his father, persisted in adopting in their worst forms the superannuated theories of protection, and attempted to enforce a scheme of government which men from their increasing independence were determined to reject, there inevitably arose that memorable collision which is well termed The Great Rebellion of England.[143] The analogy between this and the Protestant Reformation, I have already noticed; but what we have now to consider, and what, in the next chapter, I will endeavour to trace, is the nature of the difference between our Rebellion, and those contemporary wars of the Fronde, to which it was in some respects very similar.

[143] Clarendon (*Hist. of the Rebellion*, p. 216) truly calls it "the most prodigious and the boldest rebellion, that any age or country ever brought forth."

CHAPTER III

THE ENERGY OF THE PROTECTIVE SPIRIT IN FRANCE EXPLAINS THE FAILURE OF THE FRONDE. COMPARISON BETWEEN THE FRONDE AND THE CONTEMPORARY ENGLISH REBELLION.

THE object of the last chapter was, to inquire into the origin of the protective spirit. From the evidence there collected, it appears that this spirit was first organized into a distinct secular form at the close of the dark ages; but that, owing to circumstances which then arose, it was, from the beginning, much less powerful in England than in France. It has likewise appeared that, in our country, it continued to lose ground; while in France, it, early in the fourteenth century, assumed a new shape, and gave rise to a centralizing movement, manifested not only in the civil and political institutions, but also in the social and literary habits of the French nation. Thus far we seem to have cleared the way for a proper understanding of the history of the two countries; and I now purpose to follow this up a little further, and point out how this difference explains the discrepancy between the civil wars of England, and those which at the same time broke out in France.

Among the obvious circumstances connected with the Great English Rebellion, the most remarkable is, that it was a war of classes as well as of factions. From the beginning of the contest, the yeomanry and traders adhered to the parliament;[144] the nobles and

[144] "From the beginning it may be said that the yeomanry and trading classes of towns were generally hostile to the king's

the clergy rallied round the throne. And the name given to the two parties, of Roundheads [145] and Cavaliers,[146] proves that the true nature of this opposition was generally known. It proves that men were aware that a question was at issue, upon which England was divided, not so much by the particular interests of individuals, as by the general interests of the classes to which those individuals belonged.

But in the history of the French rebellion, there is no trace of so large a division. The objects of the war were in both countries precisely the same; the machinery by which those objects were attained was very different. The Fronde was like our Rebellion, insomuch that it was a struggle of the parliament against the crown; an attempt to secure liberty, and raise up a barrier against the despotism of government. So far, and so long, as we merely take a view of political objects, the parallel is complete. But the social and intellectual antecedents of the French being very different from those of the English, it necessarily followed that the shape which the rebellion took should likewise be different, even though the motives were the same. If we examine this divergence a little nearer, we shall find that it is connected with the circumstance I have already noticed—namely, that in England a war for liberty was accompanied by a war of classes, while in France there was no war of classes at all. From this it

side, even in those counties which were in his military occupation; except in a few, such as Cornwall, Worcester, Salop, and most of Wales, where the prevailing sentiment was chiefly royalist." *Hallam's Const. Hist.* vol. i. p. 578.

[145] Lord Clarendon says, in his grand style, "the rabble contemned and despised under the name of roundheads." *Hist. of the Rebellion*, p. 136. This was in 1641, when the title appears to have been first bestowed.

[146] Just before the battle of Edgehill, in 1642, Charles said to his troops, "You are called cavaliers in a reproachful signification." See the king's speech, in *Somers Tracts*, vol. iv. p. 478. Directly after the battle, he accused his opponents of "rendering all persons of honour odious to the common people, under the style of cavaliers." *May's Hist. of the Long Parliament*, book iii. p. 25.

resulted that in France the rebellion, being merely political, and not, as with us, also social, took less hold of the public mind: it was unaccompanied by those feelings of insubordination, in the absence of which freedom has always been impossible; and striking no root into the national character, it could not save the country from that servile state into which, a few years later, it, under the government of Louis XIV., rapidly fell.

That our Great Rebellion was, in its external form, a war of classes, is one of those palpable facts which lie on the surface of history. At first the parliament[147] did indeed attempt to draw over to their side some of the nobles; and in this they for a time succeeded. But as the struggle advanced, the futility of this policy became evident. In the natural order of the great movement, the nobles grew more loyal;[148] the parliament more democratic.[149] And when it was clearly seen that both parties were determined either to conquer or to die, this antagonism of parties was too clearly marked to be misunderstood; the perception which each had of its own interests being sharpened by the magnitude of the stake for which they contended.

[147] I use the word "parliament" in the sense given to it by writers of that time, and not in the legal sense.

[148] In May 1642, there remained at Westminster forty-two peers, *Hallam's Const. Hist.* vol. i. p. 559; but they gradually abandoned the popular cause; and, according to *Parl. Hist.* vol. iii. p. 1282, so dwindled, that eventually "seldom more than five or six" were present.

[149] These increasing democratic tendencies are most clearly indicated in Walker's curious work, *The History of Independency*. See, among other passages, book i. p. 59. And Clarendon, under the year 1644, says (*Hist. of the Rebellion*, p. 514): "That violent party, which had at first cozened the rest into the war, and afterwards obstructed all the approaches towards peace, found now that they had finished as much of their work as the tools which they had wrought with could be applied to, and what remained to be done must be despatched by new workmen." What these new workmen were, he afterwards explains, p. 641, to be "the most inferior people preferred to all places of trust and profit." Book xi. under the year 1648.

For, without burdening this Introduction with what may be read in our common histories, it will be sufficient to remind the reader of a few of the conspicuous events of that time. Just before the war began, the Earl of Essex was appointed general of the parliamentary forces, with the Earl of Bedford as his lieutenant. A commission to raise troops was likewise given to the Earl of Manchester,[150] the only man of high rank against whom Charles had displayed open enmity.[151] Notwithstanding these marks of confidence, the nobles, in whom parliament was at first disposed to trust, could not avoid showing the old leaven of their order.[152] The Earl of Essex so conducted himself, as to inspire the popular party with the greatest apprehensions of his treachery;[153] and when the defence of London was intrusted to Waller, he so obstinately refused to enter the name of that able officer in the commission, that the Commons were obliged to insert it by virtue of their own authority, and in spite of their

[150] This was after the appointments of Essex and Bedford, and was in 1643.

[151] "When the king attempted to arrest the five members, Manchester, at that time Lord Kymbolton, was the only peer whom he impeached. This circumstance endeared Kymbolton to the party; his own safety bound him more closely to its interests." *Lingard's England*, vol. vi. p. 337. It is also said that Lord Essex joined the popular party from personal pique against the king.

[152] Mr Carlyle has made some very characteristic, but very just observations, on the "high Essexes and Manchesters of limited notions and large estates."

[153] As Lord North puts it, "for General Essex began now to appear to the private cabalists somewhat wresty." *North's Narrative of Passages relating to the Long Parliament*, published in 1670, in *Somer's Tracts*, vol. vi. p. 578. At p. 584, the same elegant writer says of Essex, "being the first person and last of the nobility employed by the parliament in military affairs, which soon brought him to the period of his life. And may he be an example to all future ages, to deter all persons of like dignity from being instrumental in setting up a democratical power, whose interest it is to keep down all persons of his condition."

own general.[154] The Earl of Bedford, though he had received a military command, did not hesitate to abandon those who conferred it. This apostate noble fled from Westminster to Oxford; but finding that the king, who never forgave his enemies, did not receive him with the favour he expected, he returned to London; where, though he was allowed to remain in safety, it could not be supposed that he should again experience the confidence of parliament.

Such examples as these were not likely to lessen the distrust which both parties felt for each other. It soon became evident that a war of classes was unavoidable, and that the rebellion of the parliament against the king must be reinforced by a rebellion of the people against the nobles.[155] To this the popular party, whatever may have been their first intention, now willingly agreed. In 1645 they enacted a law, by which not only the Earl of Essex and the Earl of Manchester lost their command, but all members of either house were made incapable of military service.[156] And, only a week after the execution of the king, they formally took away the legislative power of the peers; putting at the same time on record their memorable opinion, that the House

[154] Sir Philip Warwick (*Memoirs*, p. 254) contemptuously calls Waller "favourite-generall of the city of London."

[155] Dr Bates, who had been physician to Cromwell, intimates that this was foreseen from the beginning. He says, that the popular party offered command to some of the nobles, "not that they had any respect for the lords, whom shortly they intended to turn out and to level with the commoners, but that they might poison them with their own venom, and rise to greater authority by drawing more over to their side." *Bates's Account of the late Troubles in England*, part i. p. 76. Lord North, too, supposes that almost immediately after the war began, it was determined to dissolve the House of Lords. Beyond this, I am not aware of any direct early evidence; except that, in 1644, Cromwell is alleged to have stated that "there would never be a good time in England till we had done with lords." *Carlyle's Cromwell*, vol. i. p. 217.

[156] This was the "Self-denying Ordinance," which was introduced in December 1644; but, owing to the resistance of the peers, was not carried until the subsequent April.

of Lords is "useless, dangerous, and ought to be abolished."

But we may find proofs still more convincing of the true character of the English rebellion, if we consider who those were by whom it was accomplished. This will show us the democratic nature of a movement which lawyers and antiquaries have vainly attempted to shelter under the form of constitutional precedent. Our great rebellion was the work, not of men who looked behind, but of men who looked before. To attempt to trace it to personal and temporary causes; to ascribe this unparalleled outbreak to a dispute respecting ship-money, or to a quarrel about the privileges of parliament, can only suit the habits of those historians who see no further than the preamble of a statute, or the decision of a judge. Such writers forget that the trial of Hampden, and the impeachment of the five members, could have produced no effect on the country, unless the people had already been prepared, and unless the spirit of inquiry and of insubordination had so increased the discontents of men, as to put them in a state where, the train being laid, the slightest spark sufficed to kindle a conflagration.

The truth is, that the rebellion was an outbreak of the democratic spirit. It was the political form of a movement, of which the Reformation was the religious form. As the Reformation was aided, not by men in high ecclesiastical offices, not by great cardinals or wealthy bishops, but by men filling the lowest and most subordinate posts, just so was the English rebellion a movement from below, an uprising from the foundations, or, as some will have it, the dregs of society. The few persons of high rank who adhered to the popular cause were quickly discarded, and the ease and rapidity with which they fell off was a clear indication of the turn that things were taking. Directly the army was freed from its noble leaders, and supplied with officers drawn from the lower classes, the fortune of war changed, the royalists were everywhere defeated, and the king made prisoner by his own subjects. Be-

tween his capture and execution, the two most important political events were his abduction by Joyce, and the forcible expulsion from the House of Commons of those members who were thought likely to interfere in his favour. Both these decisive steps were taken, and indeed only could have been taken, by men of great personal influence, and of a bold and resolute spirit. Joyce, who carried off the king, and who was highly respected in the army, had, however, been recently a common working tailor;[157] while Colonel Pride, whose name is preserved in history as having purged the House of Commons of the malignants, was about on a level with Joyce, since his original occupation was that of a drayman.[158] The tailor and the drayman were, in that age, strong enough to direct the course of public affairs, and to win for themselves a conspicuous position in the state. After the execution of Charles, the same tendency was displayed. The old monarchy being destroyed, that small but active party known as the fifth-monarchy men increased in importance, and for a time exercised considerable influence. Their three principal and most distinguished members were Venner, Tuffnel, and Okey. Venner, who was the leader, was a wine-cooper;[159] Tuffnel, who was second in command, was a carpenter;[160] and Okey, though

[157] "Cornet Joyce, who was one of the agitators in the army, a tailor, a fellow who had two or three years before served in a very inferior employment in Mr Hollis's house." *Clarendon's Rebellion*, p. 612. "A shrewd tailor-man." *D'Israeli's Commentaries on the Reign of Charles I.*, 1851, vol. ii. p. 466.

[158] Ludlow (*Memoirs*, vol. ii. p. 139); Noble (*Memoirs of the House of Cromwell*, vol. ii. p. 470); and Winstanley (*Loyal Martyrology*, ed. 1665, p. 108), mention that Pride had been a drayman. It is said that Cromwell, in ridicule of the old distinctions, conferred knighthood on him "with a faggot." *Orme's Life of Owen*, p. 164; *Harris's Lives of the Stuarts*, vol. iii. p. 478.

[159] "The fifth-monarchy, headed mainly by one Venner, a wine-cooper." *Carlyle's Cromwell*, vol. iii. p. 282. "Venner, a wine-cooper." *Lister's Life and Corresp. of Clarendon*, vol. ii. p. 62.

[160] "The second to Venner was one Tuffnel, a carpenter living in Gray's Inn Lane." *Winstanley's Martyrology*, p. 163.

he became a colonel, had filled the menial office of stoker in an Islington brewery.[161]

Nor are these to be regarded as exceptional cases. In that period, promotion depended solely on merit; and if a man had ability, he was sure to rise, no matter what his birth or former avocations might have been. Cromwell himself was a brewer;[162] and Colonel Jones, his brother-in-law, had been servant to a private gentleman.[163] Deane was the servant of a tradesman; but he became an admiral, and was made one of the commissioners of the navy.[164] Colonel Goffe had been apprentice to a drysalter;[165] Major-general Whalley had been apprentice to a draper.[166] Skippon, a common soldier who had received no education,[167] was appointed commander of the London militia; he was raised to the

[161] He was stoaker in a brew-house at Islington, and next a most poor chandler near Lion Key in Thames Street." *Parl. Hist.* vol. iii. p. 1605.

[162] Some of the clumsy eulogists of Cromwell wish to suppress the fact of his being a brewer; but that he really practised that useful trade is attested by a variety of evidence, and is distinctly stated by his own physician, Dr Bates. *Bates's Troubles in England*, vol. ii. p. 238.

[163] "John Jones, at first a serving-man, then a colonel of the Long Parliament, . . . married the Protector's sister." *Parl. Hist.* vol. iii. p. 1600. "A serving-man; . . . in process of time married one of Cromwell's sisters." *Winstanley's Martyrology*, p. 125.

[164] "Richard Deane, Esq., is said to have been a servant to one Button, a toyman in Ipswich, and to have himself been the son of a person in the same employment; . . . was appointed one of the commissioners of the navy with Popham and Blake, and in April (1649) he became an admiral and general at sea." *Noble's Lives of the Regicides*, vol. i. pp. 172, 173. Winstanley (*Martyrol.* p. 121) also says that Deane was "servant in Ipswich."

[165] "Apprentice to one Vaughan, a drysalter." *Noble's House of Cromwell*, vol. ii. p. 507.

[166] "Bound apprentice to a woollen-draper." *Winstanley's Martyr.* p. 108. He afterwards set up the same trade for himself; but with little success, for Dr Bates (*Troubles in England*, vol. ii. p. 222) calls him "a broken clothier."

[167] "Altogether illiterate." *Clarendon's Rebellion*, p. 152.

office of sergeant-major-general of the army; he was declared commander-in-chief in Ireland; and he became one of the fourteen members of Cromwell's council. Two of the lieutenants of the Tower were Berkstead and Tichborne. Berkstead was a pedlar, or at all events a hawker of small wares;[168] and Tichborne, who was a linen draper, not only received the lieutenancy of the Tower, but became a colonel, and a member of the committee of state in 1655, and of the council of state in 1659.[169] Other trades were equally successful; the highest prizes being open to all men, provided they displayed the requisite capacity. Colonel Harvey was a silk-mercer;[170] so was Colonel Rowe;[171] so also was Colonel Venn.[172] Salway had been apprentice to a grocer, but, being an able man, he rose to the rank of major in the army; he received the king's remembrancer's office; and in 1659 he was appointed by parliament a member of the council of state. Around that council-board were also gathered Bond the draper,[173] and Cawley the brewer;[174] while by

[168] "Berkstead, who heretofore sold needles, bodkins, and thimbles, and would have run on an errand any where for a little money; but who now by Cromwell was preferred to the honourable charge of lieutenant of the Tower of London." *Bates's Account of the Troubles*, part ii. p. 222.

[169] Lord Holles (*Memoirs*, p. 174) also mentions that he was "a linen-draper."

[170] "Edward Harvy, late a poor silk-man, now colonel, and hath got the Bishop of London's house and mannor of Fulham." *Walker's Independency*, part i. p. 170. "One Harvey, a decayed silk-man." *Clarendon's Rebellion*, p. 418.

[171] Owen Rowe, "put to the trade of a silk-mercer, ... went into the parliament army, and became a colonel." *Noble's Regicides*, vol. ii. p. 150.

[172] "A silkman in London; . . . . went into the army, and rose to the rank of colonel." *Noble's Regicides*, vol. ii. p. 283. "A broken silk-man in Cheapside." *Winstanley's Martyrol.*, p. 130.

[173] He was "a woollen-draper at Dorchester," and was "one of the council of state in 1649 and 1651." *Noble's Regicides*, vol. i. p. 99.

[174] "A brewer in Chichester; . . . . in 1650-1 he was appointed one of the council of state." *Noble's Regicides*, vol.

their side we find John Berners, who is said to have been a private servant,[175] and Cornelius Holland, who is known to have been a servant, and who was, indeed, formerly a link boy.[176] Among others who were now favoured and promoted to offices of trust, were Packe the woollen draper, Pury the weaver, and Pemble the tailor. The Parliament which was summoned in 1653 is still remembered as Barebone's parliament, being so called after one of the most active members, whose name was Barebone, and who was a leather seller in Fleet Street. Thus too, Downing, though a poor charity boy,[177] became teller of the exchequer, and representative of England at the Hague.[178] To these we may add, that Colonel Horton had been a gentleman's servant;[179] Colonel Berry had been a woodmonger; Colonel Cooper a haberdasher; Major Rolfe

i. p. 136. "William Cawley, a brewer of Chichester." *Winstanley's Martyrol.* p. 138.

[175] John Berners, "supposed to have been originally a serving-man," was "one of the council of state in 1659." *Noble's Regicides*, vol. i. p. 90.

[176] "Holland the linke-boy." *Walker's Independency*, part iii. p. 37. "He was originally nothing more than a servant to Sir Henry Vane; . . . . upon the establishment of the Commonwealth, he was made one of the council of state in 1649, and again in 1650." *Noble's Regicides*, vol. i. pp. 357, 358.

[177] "A poor child bred upon charity." *Harris's Stuarts*, vol. v. p. 281. "A man of an obscure birth, and more obscure education." *Clarendon's Life of Himself*, p 1116.

[178] The common opinion is, that he was the son of a clergyman at Hackney; but if so, he was probably illegitimate, considering the way he was brought up. However, his Hackney origin is very doubtful, and no one appears to know who his father was.

[179] Cromwell had a great regard for this remarkable man, who not only distinguished himself as a soldier, but, judging from a letter of his recently published, appears to have repaired the deficiencies of his early education. See *Fairfax Correspond.* vol. iv. pp. 22-25, 108. There never has been a period in the history of England in which so many men of natural ability were employed in the public service as during the Commonwealth.

a shoemaker; Colonel Fox a tinker; and Colonel Hewson a cobbler.[180]

Such were the leaders of the English rebellion, or, to speak more properly, such were the instruments by which the rebellion was consummated.[181] If we now turn to France, we shall clearly see the difference between the feelings and temper of the two nations. In that country, the old protective spirit still retained its activity; and the people, being kept in a state of pupilage, had not acquired those habits of self-command and self-reliance, by which alone great things can be effected. They had been so long accustomed to look with timid reverence to the upper classes, that, even when they rose in arms, they could not throw off the ideas of submission which were quickly discarded by our ancestors. The influence of the higher ranks was, in England, constantly diminishing; in France, it was scarcely impaired. Hence it happened that, although the English and French rebellions were contemporary, and, in their origin, aimed at precisely the same objects, they were distinguished by one most important

[180] Ludlow, who was well acquainted with Colonel Hewson, says that he "had been a shoemaker." *Ludlow's Memoirs*, vol. ii. p. 139. But this is the amiable partiality of a friend; and there is no doubt that the gallant colonel was neither more nor less than a cobbler.

[181] Walker, who relates what he himself witnessed, says, that, about 1649, the army was commanded by "colonels and superior officers, who lord it in their gilt coaches, rich apparel, costly feastings; though some of them led dray horses, wore leather pelts, and were never able to name their own fathers or mothers." *Hist. of Independ.* part ii. p. 244. The *Mercurius Rusticus*, 1647, says, "Chelmsford was governed by a tinker, two cobblers, two tailors, two pedlars." *Southey's Commonplace Book*, third series, 1850, p. 430. And, at p. 434, another work, in 1647, makes a similar statement in regard to Cambridge; while Lord Holles assures us, that "most of the colonels and officers (were) mean tradesmen, brewers, taylors, goldsmiths, shoemakers, and the like." *Holles's Memoirs*, p. 149. When Whitelocke was in Sweden, in 1653, the prætor of one of the towns abused the parliament, saying, "that they had killed their king, and were a company of taylors and cobblers." *Whitelocke's Swedish Embassy*, vol. i. p. 205.●

difference. This was, that the English rebels were headed by popular leaders; the French rebels by noble leaders. The bold and sturdy habits which had long been cultivated in England, enabled the middle and lower classes to supply their own chiefs out of their own ranks. In France, such chiefs were not to be found; simply because, owing to the protective spirit, such habits had not been cultivated. While, therefore, in our island, the functions of civil government, and of war, were conducted with conspicuous ability, and complete success, by butchers, by bakers, by brewers, by cobblers, and by tinkers, the struggle which, at the same moment, was going on in France, presented an appearance totally different. In that country, the rebellion was headed by men of a far higher standing; men, indeed, of the longest and most illustrious lineage. There, to be sure, was a display of unexampled splendour; a galaxy of rank, a noble assemblage of aristocratic insurgents and titled demagogues. There was the Prince de Condé, the Prince de Conti, the Prince de Marsillac, the Duke de Bouillon, the Duke de Beaufort, the Duke de Longueville, the Duke de Chevreuse, the Duke de Nemours, the Duke de Luynes, the Duke de Brissac, the Duke d'Elbœuf, the Duke de Candale, the Duke de la Tremouille, the Marquis de la Boulaye, the Marquis de Laigues, the Marquis de Noirmoutier, the Marquis de Vitry, the Marquis de Fosseuse, the Marquis de Sillery, the Marquis d'Estissac, the Marquis d'Hocquincourt, the Count de Rantzau, the Count de Montresor.

These were the leaders of the Fronde;[182] and the mere announcement of their names indicates the difference between the French and English rebellions. And, in consequence of this difference, there followed some

[182] Even De Retz, who vainly attempted to organize a popular party, found that it was impossible to take any step without the nobles; and, nothwithstanding his democratic tendencies, he, in 1648, thought it advisable "tâcher d'engager dans les intérêts publics les personnes de qualité." *Mém. de Joly*, p. 31.

results, which are well worth the attention of those writers who, in their ignorance of the progress of human affairs, seek to uphold that aristocratic power, which, fortunately for the interests of mankind, has long been waning; and which, during the last seventy years, has, in the most civilized countries, received such severe and repeated shocks, that its ultimate fate is hardly a matter respecting which much doubt can now be entertained.

The English rebellion was headed by men, whose tastes, habits, and associations, being altogether popular, formed a bond of sympathy between them and the people, and preserved the union of the whole party. In France, the sympathy was very weak, and therefore the union was very precarious. What sort of sympathy could there be between the mechanic and the peasant, toiling for their daily bread, and the rich and dissolute noble, whose life was passed in those idle and frivolous pursuits which debased his mind, and made his order a byword and a reproach among the nations? To talk of sympathy existing between the two classes is a manifest absurdity, and most assuredly would have been deemed an insult by those high-born men, who treated their inferiors with habitual and insolent contempt. It is true, that, from causes which have been already stated, the people did, unhappily for themselves, look up to those above them with the greatest veneration; but every page of French history proves how unworthily this feeling was reciprocated, and in how complete a thraldom the lower classes were kept. While, therefore, the French, from their long-established habits of dependence, were become incapable of conducting their own rebellion, and, on that account, were obliged to place themselves under the command of their nobles, this very necessity confirmed the servility which caused it; and thus stunting the growth of freedom, prevented the nation from effecting, by their civil wars, those great things which we, in England, were able to bring about by ours.

Indeed, it is only necessary to read the French

literature of the seventeenth century, to see the incompatibility of the two classes, and the utter hopelessness of fusing into one party the popular and aristocratic spirit. While the object of the people was to free themselves from the yoke, the object of the nobles was merely to find new sources of excitement, and minister to that personal vanity for which, as a body, they have always been notorious. As this is a department of history that has been little studied, it will be interesting to collect a few instances, which will illustrate the temper of the French aristocracy, and will show what sort of honours, and what manner of distinctions those were, which this powerful class was most anxious to obtain.

That the objects chiefly coveted were of a very trifling description, will be anticipated by whoever has studied the effect which, in an immense majority of minds, hereditary distinctions produce upon personal character. How pernicious such distinctions are, may be clearly seen in the history of all the European aristocracies; and in the notorious fact that none of them have preserved even a mediocrity of talent, except in countries where they are frequently invigorated by the infusion of plebeian blood, and their order strengthened by the accession of those masculine energies which are natural to men who make their own position, but cannot be looked for in men whose position is made for them. For, when the notion is once firmly implanted in the mind, that the source of honour is from without, rather than from within, it must invariably happen that the possession of external distinction will be preferred to the sense of internal power. In such cases, the majesty of the human intellect, and the dignity of human knowledge, are considered subordinate to those mock and spurious gradations by which weak men measure the degrees of their own littleness. Hence it is, that the real precedence of things becomes altogether reversed; that which is trifling is valued more than that which is great; and the mind is enervated by conforming to a false standard

of merit, which its own prejudices have raised. On this account, they are evidently in the wrong, who reproach the nobles with their pride, as if it were a characteristic of their order. The truth is, that if pride were once established among them, their extinction would rapidly follow. To talk of the pride of hereditary rank, is a contradiction in terms. Pride depends on the consciousness of self-applause; vanity is fed by the applause of others. Pride is a reserved and lofty passion, which disdains those external distinctions that vanity eagerly grasps. The proud man sees, in his own mind, the source of his own dignity; which, as he well knows, can be neither increased nor diminished by any acts except those which proceed solely from himself. The vain man, restless, insatiable, and always craving after the admiration of his contemporaries, must naturally make great account of those external marks, those visible tokens, which, whether they be decorations or titles, strike directly on the senses, and thus captivate the vulgar, to whose understandings they are immediately obvious. This, therefore, being the great distinction, that pride looks within, while vanity looks without, it is clear that when a man values himself for a rank which he inherited by chance, without exertion, and without merit, it is a proof, not of pride, but of vanity, and of vanity of the most despicable kind. It is a proof that such a man has no sense of real dignity, no idea of what that is in which alone all greatness consists. What marvel if, to minds of this sort, the most insignificant trifles should swell into matters of the highest importance? What marvel if such empty understandings should be busied with ribands, and stars, and crosses; if this noble should yearn after the Garter, and that noble pine for the Golden Fleece; if one man should long to carry a wand in the precincts of the court, and another man to fill an office in the royal household; while the ambition of a third, is, to make his daughter a maid-of-honour, or to raise his wife to be mistress of the robes?

We, seeing these things, ought not to be surprised that the French nobles, in the seventeenth century, displayed, in their intrigues and disputes, a frivolity, which, though redeemed by occasional exceptions, is the natural characteristic of every hereditary aristocracy. A few examples of this will suffice to give the reader some idea of the tastes and temper of that powerful class which, during several centuries, retarded the progress of French civilization.

Of all the questions on which the French nobles were divided, the most important was that touching the right of sitting in the royal presence. This was considered to be a matter of such gravity, that, in comparison with it, a mere struggle for liberty faded into insignificance. And what made it still more exciting to the minds of the nobles was, the extreme difficulty with which this great social problem was beset. According to the ancient etiquette of the French court, if a man were a duke, his wife might sit in the presence of the queen; but if his rank were inferior, even if he were a marquis, no such liberty could be allowed.[183] So far, the rule was very simple, and, to the duchesses themselves, highly agreeable. But the marquises, the counts, and the other illustrious nobles, were uneasy at this invidious distinction, and exerted all their energies to procure for their own wives the same honour. This the dukes strenuously resisted; but, owing to circumstances which, unfortunately, are not fully understood, an innovation was made in the reign of Louis XIII., and the privilege of sitting in the same room with the queen was conceded to the female members of the Bouillon family. In consequence of this evil precedent, the question became seriously complicated, since other members of the aristocracy considered that the purity of their descent gave them claims nowise inferior to those of the house of

[183] Hence the duchesses were called "femmes assises"; those of lower rank "non assises." *Mém de Fontenay Mareuil*, vol. i. p. 111.

Bouillon, whose antiquity, they said, had been grossly exaggerated. The contest which ensued, had the effect of breaking up the nobles into two hostile parties, one of which sought to preserve that exclusive privilege in which the other wished to participate. To reconcile these rival pretensions, various expedients were suggested; but all were in vain, and the court, during the administration of Mazarin, being pressed by the fear of a rebellion, showed symptoms of giving way, and of yielding to the inferior nobles the point they so ardently desired. In 1648 and 1649, the queen-regent, acting under the advice of her council, formally conceded the right of sitting in the royal presence to the three most distinguished members of the lower aristocracy, namely, the Countess de Fleix, Madame de Pons, and the Princess de Marsillac.[184] Scarcely had this decision been promulgated, when the princes of the blood and the peers of the realm were thrown into the greatest agitation.[185] They immediately summoned to the capital those members of their own order who were interested in repelling this daring aggression, and, forming themselves into an assembly, they at once adopted measures to vindicate their ancient rights. On the other hand, the inferior nobles, flushed by their recent success, insisted that the concession just made should be raised into a precedent; and that, as the honour of being seated in the presence of majesty had been conceded to the house of Foix, in the person of the Countess de Fleix, it should likewise be granted to all those who could prove that their ancestry was equally illustrious. The greatest confusion now arose; and both sides urgently insisting on their own claims, there was, for

[184] As to the Countess de Fleix and Madame de Pons, see *Mém. de Motteville*, vol. iii. pp. 116, 369. According to the same high authority (vol. iii. p. 367), the inferiority of the Princess de Marsillac consisted in the painful fact, that her husband was merely the son of a duke, and the duke himself was still alive.

[185] The long account of these proceedings in *Mém. de Motteville*, vol. iii. pp. 367-393, shows the importance attached to them by contemporary opinion.

many months, imminent danger lest the question should be decided by an appeal to the sword.[186] But as the higher nobles, though less numerous than their opponents, were more powerful, the dispute was finally settled in their favour. The queen sent to their assembly a formal message, which was conveyed by four of the marshals of France, and in which she promised to revoke those privileges, the concession of which had given such offence to the most illustrious members of the French aristocracy. At the same time, the marshals not only pledged themselves as responsible for the promise of the queen, but undertook to sign an agreement that they would personally superintend its execution. The nobles, however, who felt that they had been aggrieved in their most tender point, were not yet satisfied, and to appease them, it was necessary that the atonement should be as public as the injury. It was found necessary, before they would peaceably disperse, that government should issue a document, signed by the queen-regent, and by the four secretaries of state, in which the favours granted to the unprivileged nobility were withdrawn, and the much-cherished honour of sitting in the royal presence was taken away from the Princess de Marsillac, from Madame de Pons, and from the Countess de Fleix.[187]

These were the subjects which occupied the minds, and wasted the energies of the French nobles, while their country was distracted by civil war, and while questions were at issue of the greatest importance—questions concerning the liberty of the nation, and the reconstruction of the government. It is hardly necessary to point out how unfit such men must have been to head the people in their arduous struggle, and

[186] Indeed, at one moment, it was determined that a counter-demonstration should be made on the part of the inferior nobles: a proceeding which, if adopted, must have caused civil war.

[187] The best accounts of this great struggle will be found in the *Memoirs of Madame de Motteville*, and in those of Omer Talon; two writers of very different minds, but both of them deeply impressed with the magnitude of the contest.

how immense was the difference between them and the leaders of the great English Rebellion. The causes of the failure of the Fronde are, indeed, obvious, when we consider that its chiefs were drawn from that very class respecting whose tastes and feelings some evidence has just been given.[188] How that evidence might be almost indefinitely extended, is well known to readers of the French memoirs of the seventeenth century—a class of works which, being mostly written either by the nobles or their adherents, supplies the best materials from which an opinion may be formed. In looking into these authorities, where such matters are related with a becoming sense of their importance, we find the greatest difficulties and disputes arising as to who was to have an arm-chair at court; who was to be invited to the royal dinners, and who was to be excluded from them; who was to be kissed by the queen, and who was not to be kissed by her; who should have the first seat in church; what the proper proportion was between the rank of different persons, and the length of the cloth on which they were allowed to stand; what was the dignity a noble must have attained, in order to justify his entering the Louvre in a coach; who was to have precedence at coronations; whether all dukes were equal, or whether, as some thought, the Duke de Bouillon, having once possessed the sovereignty of Sedan, was superior to the Duke de la Rochefoucauld, who had never possessed any sovereignty at all;[189] whether the Duke de Beaufort ought or ought

[188] That the failure of the Fronde is not to be ascribed to the inconstancy of the people, is admitted by De Retz, by far the ablest observer of his time.

[189] *Mém. de Lenet*, vol. i. pp. 378, 379. Lenet, who was a great admirer of the nobles, relates all this without the faintest perception of its absurdity. I ought not to omit a terrible dispute, in 1652, respecting the recognition of the claims of the Duke de Rohan (*Mém. de Conrart*, pp. 151, 152); nor another dispute, in the reign of Henry IV., as to whether a duke ought to sign his name before a marshal, or whether the marshal should sign first. *De Thou, Hist. Univ.* vol. xi. p. 11.

not to enter the council chamber before the Duke de Nemours, and whether, being there, he ought to sit above him.[190] These were the great questions of the day: while, as if to exhaust every form of absurdity, the most serious misunderstandings arose as to who should have the honour of giving the king his napkin as he ate his meals, and who was to enjoy the inestimable privilege of helping on the queen with her shift.[191]

It may, perhaps, be thought that I owe some apology to the reader for obtruding upon his notice these miserable disputes respecting matters which, however despicable they now appear, were once valued by men not wholly devoid of understanding. But, it should be remembered that their occurrence, and above all, the importance formerly attached to them, is part of the history of the French mind; and they are therefore to be estimated, not according to their intrinsic dignity, but according to the information they supply respecting a state of things which has now passed away. Events of this sort, though neglected by ordinary historians, are among the staff and staple of history. Not only do they assist in bringing before our minds the age to which they refer, but in a philosophic point of view they are highly important. They are part of the materials from which we may generalize the laws of that great protective spirit, which in different periods assumes different shapes; but which, whatever its form may be, always owes its power to the feeling of veneration as opposed to the feeling of independence. How natural this power is, in certain stages of society,

[190] This difficulty, in 1652, caused a violent quarrel between the two dukes, and ended in a duel, in which the Duke de Nemours was killed, as is mentioned by most of the contemporary writers.

[191] According to some authorities, a man ought to be a duke before his wife could be allowed to meddle with the queen's shift; according to other authorities, the lady-in-waiting, whoever she might be, had the right, unless a princess happened to be present.

becomes evident if we examine the basis on which veneration is itself supported. The origin of veneration is wonder and fear. These two passions, either alone or combined, are the ordinary source of veneration; and the way in which they arise is obvious. We wonder because we are ignorant, and we fear because we are weak. It is therefore natural, that in former times, when men were more ignorant and more weak than they now are, they should likewise have been more given to veneration, more inclined to those habits of reverence, which if carried into religion, cause superstition, and if carried into politics, cause despotism. In the ordinary march of society, these evils are remedied by that progress of knowledge, which at once lessens our ignorance and increases our resources: in other words, which diminishes our proneness to wonder and to fear, and thus weakening our feelings of veneration, strengthens, in the same proportion, our feelings of independence. But in France, this natural tendency was, as we have already seen, counteracted by an opposite tendency; so that while, on the one hand, the protective spirit was enfeebled by the advance of knowledge, it was, on the other hand, invigorated by those social and political circumstances which I have attempted to trace; and by virtue of which, each class exercising great power over the one below it, the subordination and subserviency of the whole were completely maintained. Hence the mind became accustomed to look upwards, and to rely, not on its own resources, but on the resources of others. Hence that pliant and submissive disposition, for which the French, until the eighteenth century, were always remarkable. Hence, too, that inordinate respect for the opinions of others, on which vanity, as one of their national characteristics, is founded.[192] For, the feelings of vanity and of veneration have evidently this in common, that they induce each man to measure his actions by a standard external to himself; while the

[192] Also connected with the institution of chivalry, both being cognate symptoms of the same spirit.

opposite feelings of pride and of independence would make him prefer that internal standard which his own mind alone can supply. The result of all this was, that when, in the middle of the seventeenth century, the intellectual movement stimulated the French to rebellion, its effect was neutralised by that social tendency which, even in the midst of the struggle, kept alive the habits of their old subservience. Thus it was that, while the war went on, there still remained a constant inclination on the part of the people to look up to the nobles, on the part of the nobles to look up to the crown. Both classes relied upon what they saw immediately above them. The people believed that without the nobles there was no safety; the nobles believed that without the crown there was no honour. In the case of the nobles, this opinion can hardly be blamed; for as their distinctions proceed from the crown, they have a direct interest in upholding the ancient notion that the sovereign is the fountain of honour. They have a direct interest in that preposterous doctrine, according to which, the true source of honour being overlooked, our attention is directed to an imaginary source, by whose operation it is believed, that in a moment, and at the mere will of a prince, the highest honours may be conferred upon the meanest men. This, indeed, is but part of the old scheme to create distinctions for which nature has given no warrant; to substitute a superiority which is conventional for that which is real; and thus try to raise little minds above the level of great ones. The utter failure, and, as society advances, the eventual cessation of all such attempts, is certain; but it is evident, that as long as the attempts are made, they who profit by them must be inclined to value those from whom they proceed. Unless counteracting circumstances interpose, there must be between the two parties that sympathy which is caused by the memory of past favours, and the hope of future ones. In France, this natural feeling being strengthened by that protective spirit which induced men to cling to those above them, it is not

strange that the nobles, even in the midst of their turbulence, should seek the slightest favours of the crown with an eagerness of which some examples have just been given. They had been so long accustomed to look up to the sovereign as the source of their own dignity, that they believed there was some hidden dignity even in his commonest actions; so that, to their minds, it was a matter of the greatest importance which of them should hand him his napkin, which of them should hold his basin, and which of them should put on his shirt.[193] It is not, however, for the sake of casting ridicule upon these idle and frivolous men, that I have collected evidence respecting the disputes with which they were engrossed. So far from this, they are rather to be pitied than blamed; they acted according to their instincts; they even exerted such slender abilities as nature had given to them. But we may well feel for that great country whose interests depended on their care. And it is solely in reference to the fate of the French people that the historian need trouble himself with the history of the French nobles. At the same time, evidence of this sort, by disclosing the tendencies of the old nobility, displays in one of its most active forms that protective and aristocratic spirit, of which they know little who only know it in its present reduced and waning condition. Such facts are to be regarded as the symptoms of a cruel disease, by which Europe is indeed still afflicted, but which we now see only in a very mitigated form, and of whose native virulence no one can have an idea, unless he has studied it in those early stages, when, raging uncontrolled, it obtained such a mastery as to check the growth of liberty, stop the progress of nations, and dwarf the energies of the human mind.

It is hardly necessary to trace at greater length the way in which France and England diverged from each other, or to point out, what I hope will henceforth be

[193] Even just before the French Revolution, these feelings still existed.

considered the obvious difference between the civil wars in the two countries. It is evident that the low-born and plebeian leaders of our rebellion could have no sympathy with those matters which perplexed the understanding of the great French nobles. Men like Cromwell and his coadjutors, were not much versed in the mysteries of genealogy, or in the subtleties of heraldic lore. They had paid small attention to the etiquette of courts; they had not even studied the rules of precedence. All this was foreign to their design. On the other hand, what they did was done thoroughly. They knew that they had a great work to perform; and they performed it well.[194] They had risen in arms against a corrupt and despotic government, and they would not stay their hands until they had pulled down those who were in high places; until they had not only removed the evil, but had likewise chastised those bad men by whom the evil was committed. And although in this, their glorious undertaking, they did undoubtedly display some of the infirmities to which even the highest minds are subject; we, at least, ought never to speak of them but with that unfeigned respect which is due to those who taught the first great lesson to the kings of Europe, and who, in language not to be mistaken, proclaimed to them that the impunity which they had long enjoyed was now come to an end, and that against their transgressions the people possessed a remedy, sharper, and more decisive, than any they had hitherto ventured to use.

[194] Ludlow thus expresses the sentiments which induced him to make war upon the crown: "The question in dispute between the king's party and us being, as I apprehended, whether the king should govern as a god by his will, and the nation be governed by force like beasts? or whether the people should be governed by laws made by themselves, and live under a government derived from their own consent? being fully persuaded, that an accommodation with the king was unsafe to the people of England, and unjust and wicked in the nature of it." *Ludlow's Memoirs*, vol. i. p. 230.

CHAPTER IV

THE PROTECTIVE SPIRIT CARRIED BY LOUIS XIV INTO LITERATURE. EXAMINATION OF THE CONSEQUENCES OF THIS ALLIANCE BETWEEN THE INTELLECTUAL CLASSES AND THE GOVERNING CLASSES.

THE reader will now be able to understand how it was that the protective system, and the notions of subordination connected with it, gained in France a strength unknown in England, and caused an essential divergence between the two countries. To complete the comparison, it seems necessary to examine how this same spirit influenced the purely intellectual history of France, as well as its social and political history. For the ideas of dependence upon which the protective scheme is based, encouraged a belief that the subordination which existed in politics and in society ought also to exist in literature; and that the paternal, inquisitive, and centralizing system which regulated the material interests of the country, should likewise regulate the interests of its knowledge. When, therefore, the Fronde was finally overthrown, everything was prepared for that singular intellectual polity, which during fifty years characterized the reign of Louis XIV., and which was to French literature what feudalism was to French politics. In both cases, homage was paid by one party, and protection and favour accorded by the other. Every man of letters became a vassal of the French crown. Every book was written with a view to the royal favour; and to obtain the patronage of the king was considered the most decisive proof of intellectual eminence. The

effects produced by this system will be examined in the present chapter. The apparent cause of the system was the personal character of Louis XIV.; but the real and overruling causes were those circumstances which I have already pointed out, and which established in the French mind associations that remained undisturbed until the eighteenth century. To invigorate those associations, and to carry them into every department of life, was the great aim of Louis XIV.; and in that he was completely successful. It is on this account that the history of his reign becomes highly instructive, because we see in it the most remarkable instance of despotism which has ever occurred; a despotism of the largest and most comprehensive kind; a despotism of fifty years over one of the most civilized people in Europe, who not only bore the yoke without repining, but submitted with cheerfulness, and even with gratitude, to him by whom it was imposed.[195]

What makes this the more strange is, that the reign of Louis XIV. must be utterly condemned if it is tried even by the lowest standard of morals, of honour, or of interest. A coarse and unbridled profligacy, followed by the meanest and most grovelling superstition, characterized his private life; while in his public career, he displayed an arrogance and a systematic

[195] Foreigners were equally amazed at the general, and still more, at the willing servility. Lord Shaftesbury, in a letter dated February 1704-5, passes a glowing eulogy upon liberty; but he adds, that in France, "you will hardly find this argument understood; for whatever flashes may now and then appear, I never yet knew one single Frenchman a free man." *Forster's Original Letters of Locke, Sidney, and Shaftesbury*, 1830, p. 205. In the same year, De Foe makes a similar remark in regard to the French nobles, *Wilson's Life of De Foe*, vol. ii. p. 209; and, in 1699, Addison writes from Blois a letter which strikingly illustrates the degradation of the French. *Aikin's Life of Addison*, vol. i. p. 80. Compare *Burnet's History of My Own Times*, vol. iv. p. 365, on "the gross excess of flattery to which the French have run, beyond the examples of former ages, in honour of their king."

perfidy which eventually roused the anger of all Europe, and brought upon France sharp and signal retribution. As to his domestic policy, he formed a strict alliance with the church; and although he resisted the authority of the Pope, he willingly left his subjects to be oppressed by the tyranny of the clergy. To them he abandoned everything except the exercise of his own prerogative. Led on by them, he, from the moment he assumed the government, began to encroach upon those religious liberties, of which Henry IV. had laid the foundation, and which down to this period had been preserved intact.[196] It was at the instigation of the clergy that he revoked the Edict of Nantes, by which the principle of toleration had for nearly a century been incorporated with the law of the land.[197] It was at their instigation that, just before this outrage upon the most sacred rights of his subjects, he, in order to terrify the Protestants into conversion, suddenly let loose upon them whole troops of dissolute soldiers, who were allowed to practise the most revolting cruelties. The frightful barbarities which followed are related by authentic writers;[198] and of the effect produced on the material interests of the nation, some idea may be formed

196 Flassan supposes that the first persecuting laws were in 1679: "Dès l'année 1679 les concessions faites aux protestans avaient été graduellement restreintes." *Diplomatie Française*, vol. iv. p. 92. But the fact is, that these laws began in 1662, the year after the death of Mazarin. In 1667, a letter from Thynne to Lord Clarendon (*Lister's Life of Clarendon*), vol. iii. p. 446) mentions "the horrid persecutions the reformed religion undergoes in France"; and Locke, who travelled in France in 1675 and 1676, states in his Journal (*King's Life of Locke*, vol. i. p. 110) that the Protestants were losing "every day some privilege or other."

197 An account of the revocation will be found in all the French historians; but I do not remember that any of them have noticed that there was a rumour of it in Paris twenty years before it occurred.

198 Compare *Burnet's History of My Own Times*, vol. iii. pp. 73-76, with *Siècle de Louis XIV.*, in *Œuvres de Voltaire*, vol. xx. pp. 377, 378.

from the fact, that these religious persecutions cost France half a million of her most industrious inhabitants, who fled to different parts, taking with them those habits of labour, and that knowledge and experience in their respective trades, which had hitherto been employed in enriching their own country. These things are notorious, they are incontestable, and they lie on the surface of history. Yet, in the face of them, there are still found men who hold up for admiration the age of Louis XIV. Although it is well known that in his reign every vestige of liberty was destroyed; that the people were weighed down by an insufferable taxation; that their children were torn from them by tens of thousands to swell the royal armies; that the resources of the country were squandered to an unprecedented extent; that a despotism of the worst kind was firmly established; — although all this is universally admitted, yet there are writers, even in our own day, who are so infatuated with the glories of literature, as to balance them against the most enormous crimes, and who will forgive every injury inflicted by a prince during whose life there were produced the letters of Pascal, the Orations of Bossuet, the Comedies of Molière, and the Tragedies of Racine.

This method of estimating the merits of a sovereign is, indeed, so rapidly dying away, that I shall not spend any words in refuting it. But it is connected with a more widely diffused error respecting the influence of royal patronage upon national literature. This is a delusion which men of letters have themselves been the first to propagate. From the language too many of them are in the habit of employing, we might be led to believe that there is some magical power in the smiles of a king, which stimulates the intellect of the fortunate individual whose heart they are permitted to gladden. Nor must this be despised, as one of those harmless prejudices that still linger round the person of the sovereign. It is not only founded on a misconception of the nature of things, but it is in its practical consequences very injurious. It is injurious

to the independent spirit which literature should always possess; and it is injurious to princes themselves, because it strengthens that vanity of which they generally have too large a share. Indeed, if we consider the position they now occupy in the most civilized countries, we shall at once see the absurdity of an opinion which, in the present state of knowledge, is unfit to be held by educated men.

From the moment that there was finally abandoned the theological fiction of the divine right of kings, it necessarily followed that the respect felt for them should suffer a corresponding diminution. The superstitious reverence with which they were formerly regarded is extinct, and at the present day we are no longer awed by that divinity with which their persons were once supposed to be hedged. The standard, therefore, by which we should measure them is obvious. We should applaud their conduct in proportion as they contribute towards the happiness of the nation over which they are intrusted with power; but we ought to remember that, from the manner in which they are educated, and from the childish homage always paid to them, their information must be very inaccurate, and their prejudices very numerous.[199] On this account, so far from expecting that they should be judicious patrons of literature, or should in any way head their age, we ought to be satisfied if they do not obstinately oppose the spirit of their time, and if they do not attempt to stop the

[199] In this, as in all instances, the language of respect long survives the feeling to which the language owed its origin. Lord Brougham (*Political Philosophy*, vol. i. p. 42, Lond. 1849) observes that "all their titles are derived from a divine original—all refer to them as representing the Deity on earth. They are called '*Grace*,' '*Majesty*.' They are termed '*The Lord's anointed*,' '*The Vicegerent of God upon earth*'; with many other names which are either nonsensical or blasphemous, but which are outdone in absurdity by the kings of the East." True enough: but if Lord Brougham had written thus three centuries ago, he would have had his ears cut off for his pains.

march of society. For, unless the sovereign, in spite of the intellectual disadvantages of his position, is a man of very enlarged mind, it must usually happen that he will reward, not those who are most able, but those who are most compliant; and that while he refuses his patronage to a profound and independent thinker, he will grant it to an author who cherishes ancient prejudices and defends ancient abuses. In this way, the practice of conferring on men of letters either honorary or pecuniary rewards, is agreeable, no doubt, to those who receive them; but has a manifest tendency to weaken the boldness and energy of their sentiments, and therefore to impair the value of their works. This might be made evident by publishing a list of those literary pensions which have been granted by European princes. If this were done, the mischief produced by these and similar rewards would be clearly seen. After a careful study of the history of literature, I think myself authorized to say, that for one instance in which a sovereign has recompensed a man who is before his age, there are at least twenty instances of his recompensing one who is behind his age. The result is, that in every country where royal patronage has been long and generally bestowed, the spirit of literature, instead of being progressive, has become reactionary. An alliance has been struck up between those who give and those who receive. By a system of bounties, there has been artificially engendered a greedy and necessitous class; who, eager for pensions, and offices, and titles, have made the pursuit of truth subordinate to the desire of gain, and have infused into their writings the prejudices of the court to which they cling. Hence it is, that the marks of favour have become the badge of servitude. Hence it is, that the acquisition of knowledge, by far the noblest of all occupations, an occupation which of all others raises the dignity of man, has been debased to the level of a common profession, where the chances of success are measured by the number of rewards, and where the highest honours are in the gift of

whoever happens to be the minister or sovereign of the day.

The tendency forms of itself a decisive objection to the views of those who wish to intrust the executive government with the means of rewarding literary men. But there is also another objection, in some respects still more serious. Every nation which is allowed to pursue its course uncontrolled, will easily satisfy the wants of its own intellect, and will produce such a literature as is best suited to its actual condition. And it is evidently for the interest of all classes that the production shall not be greater than the want; that the supply shall not exceed the demand. It is, moreover, necessary to the well-being of society that a healthy proportion should be kept up between the intellectual classes and the practical classes. It is necessary that there should be a certain ratio between those who are most inclined to think, and those who are most inclined to act. If we were all authors, our material interests would suffer; if we were all men of business, our mental pleasures would be abridged. In the first case, we should be famished philosophers; in the other case, we should be wealthy fools. Now, it is obvious that, according to the commonest principles of human action, the relative numbers of these two classes will be adjusted, without effort, by the natural, or, as we call it, the spontaneous movement of society. But if a government takes upon itself to pension literary men, it disturbs this movement; it troubles the harmony of things. This is the unavoidable result of that spirit of interference, or, as it is termed, protection, by which every country has been greatly injured. If, for instance, a fund were set apart by the state for rewarding butchers and tailors, it is certain that the number of those useful men would be needlessly augmented. If another fund is appropriated for the literary classes, it is as certain that men of letters will increase more rapidly than the exigencies of the country require. In both cases, an artificial stimulus will produce an unhealthy action. Surely, food and

clothes are as necessary for the body as literature is for the mind. Why, then, should we call upon government to encourage those who write our books, any more than to encourage those who kill our mutton and mend our garments? The truth is, that the intellectual march of society is, in this respect, exactly analogous to its physical march. In some instances a forced supply may, indeed, create an unnatural want. But this is an artificial state of things, which indicates a diseased action. In a healthy condition, it is not the supply which causes the want, but it is the want which gives rise to the supply. To suppose, therefore, that an increase of authors would necessarily be followed by a diffusion of knowledge, is as if we were to suppose that an increase of butchers must be followed by a diffusion of food. This is not the way in which things are ordered. Men must have appetite before they will eat; they must have money before they can buy; they must be inquisitive before they will read. The two great principles which move the world are, the love of wealth and the love of knowledge. These two principles respectively represent and govern the two most important classes into which every civilized country is divided. What a government gives to one of these classes, it must take from the other. What it gives to literature, it must take from wealth. This can never be done to any great extent, without entailing the most ruinous consequences. For, the natural proportions of society being destroyed, society itself will be thrown into confusion. While men of letters are protected, men of industry will be depressed. The lower classes can count for little in the eyes of those to whom literature is the first consideration. The idea of the liberty of the people will be discouraged; their persons will be oppressed; their labour will be taxed. The arts necessary to life will be despised, in order that those which embellish life may be favoured. The many will be ruined, that the few may be pleased. While everything is splendid above, all will be rotten below. Fine pictures, noble palaces, touching dramas—these may

for a time be produced in profusion, but it will be at the cost of the heart and strength of the nation. Even the class for whom the sacrifice has been made, will soon decay. Poets may continue to sing the praises of the prince who has bought them with his gold. It is, however, certain that men who begin by losing their independence, will end by losing their energy. Their intellect must be robust indeed, if it does not wither in the sickly atmosphere of a court. Their attention being concentrated on their master, they insensibly contract those habits of servility which are suited to their position; and, as the range of their sympathies is diminished, the use and action of their genius become impaired. To them submission is a custom, and servitude a pleasure. In their hands, literature soon loses its boldness, tradition is appealed to as the ground of truth, and the spirit of inquiry is extinguished. Then it is, that there comes one of those sad moments in which, no outlet being left for public opinion, the minds of men are unable to find a vent; their discontents, having no voice, slowly rankle into a deadly hatred; their passions accumulate in silence, until at length, losing all patience, they are goaded into one of those terrible revolutions, by which they humble the pride of their rulers, and carry retribution even into the heart of the palace.

The truth of this picture is well known to those who have studied the history of Louis XIV., and the connexion between it and the French Revolution. That prince adopted, during his long reign, the mischievous practice of rewarding literary men with large sums of money, and of conferring on them numerous marks of personal favour. As this was done for more than half a century; and as the wealth which he thus unscrupulously employed was of course taken from his other subjects, we can find no better illustration of the results which such patronage is likely to produce. He, indeed, has the merit of organizing into a system that protection of literature which some are so anxious to restore. What the effect of this was upon the general interests

of knowledge, we shall presently see. But its effect upon authors themselves should be particularly attended to by those men of letters who, with little regard to their own dignity, are constantly reproaching the English government for neglecting the profession of which they themselves are members. In no age have literary men been rewarded with such profuseness as in the reign of Louis XIV.; and in no age have they been so mean-spirited, so servile, so utterly unfit to fulfil their great vocation as the apostles of knowledge and the missionaries of truth. The history of the most celebrated authors of that time proves that, notwithstanding their acquirements, and the power of their minds, they were unable to resist the surrounding corruption. To gain the favour of the king, they sacrificed that independent spirit which should have been dearer to them than life. They gave away the inheritance of genius; they sold their birthright for a mess of pottage. What happened then, would under the same circumstances happen now. A few eminent thinkers may be able for a certain time to resist the pressure of their age. But, looking at mankind generally, society can have no hold on any class except through the medium of their interests. It behoves, therefore, every people to take heed, that the interests of literary men are on their side rather than on the side of their rulers. For, literature is the representative of intellect, which is progressive; government is the representative of order, which is stationary. As long as these two great powers are separate, they will correct and react upon each other, and the people may hold the balance. If, however, these powers coalesce, if the government can corrupt the intellect, and if the intellect will yield to the government, the inevitable result must be, despotism in politics, and servility in literature. This was the history of France under Louis XIV.; and this, we may rest assured, will be the history of every country that shall be tempted to follow so attractive but so fatal an example.

The reputation of Louis XIV. originated in the

gratitude of men of letters; but it is now supported by a popular notion that the celebrated literature of his age is mainly to be ascribed to his fostering care. If, however, we examine this opinion, we shall find that, like many of the traditions of which history is full, it is entirely devoid of truth. We shall find two leading circumstances, which will prove that the literary splendour of his reign was not the result of his efforts, but was the work of that great generation which preceded him; and that the intellect of France, so far from being benefited by his munificence, was hampered by his protection.

I. The first circumstance is, that the immense impulse which, during the administrations of Richelieu and of Mazarin, had been given to the highest branches of knowledge, was suddenly stopped. In 1661 Louis XIV. assumed the government; and from that moment until his death, in 1715, the history of France, so far as great discoveries are concerned, is a blank in the annals of Europe. If, putting aside all preconceived notions respecting the supposed glory of that age, we examine the matter fairly, it will be seen that in every department there was a manifest dearth of original thinkers. There was much that was elegant, much that was attractive. The senses of men were soothed and flattered by the creations of art, by paintings, by palaces, by poems; but scarcely anything of moment was added to the sum of human knowledge. If we take the mathematics, and those mixed sciences to which they are applicable, it will be universally admitted that their most successful cultivators in France during the seventeenth century were Descartes, Pascal, Fermat, Gassendi, and Mersenne. But, so far from Louis XIV. having any share in the honour due to them, these eminent men were engaged in their investigations while the king was still in his cradle, and completed them before he assumed the government, and therefore before his system of protection came into play. Descartes died in 1650, when the king was twelve years old. Pascal, whose name, like

that of Descartes, is commonly associated with the age of Louis XIV., had gained an European reputation while Louis, occupied in the nursery with his toys, was not aware that any such man existed. His treatise on conic sections was written in 1639;[200] his decisive experiments on the weight of air were made in 1648;[201] and his researches on the cycloid, the last great inquiry he ever undertook, were in 1658, when Louis, still under the tutelage of Mazarin, had no sort of authority. Fermat was one of the most profound thinkers of the seventeenth century, particularly as a geometrician, in which respect he was second only to Descartes. The most important steps he took are those concerning the geometry of infinites, applied to the ordinates and tangents of curves, which, however, he completed in or before 1636. As to Gassendi and Mersenne, it is enough to say that Gassendi died in 1655, six years before Louis was at the head of affairs; while Mersenne died in 1648, when the great king was ten years old.

These were the men who flourished in France just before the system of Louis XIV. came into operation. Shortly after their death the patronage of the king began to tell upon the national intellect; and during the next fifty years no addition of importance was made to either branch of the mathematics, or, with the single exception of acoustics,[202] to any of the sciences to which the mathematics are applied. The further the seventeenth century advanced, the more evident did the

[200] In *Biog. Univ.* vol. xxxiii. p. 50, he is said to have composed it "à l'âge de seize ans"; and at p. 46, to have been born in 1623.

[201] Sir John Herschel (*Disc. on Nat. Philos.* pp. 229, 230) calls this "one of the first, if not the very first," crucial instance recorded in physics; and he thinks that it "tended, more powerfully than anything which had previously been done in science, to confirm in the minds of men that disposition to experimental verification which had scarcely yet taken full and secure root." In this point of view, the addition it actually made to knowledge is the smallest part of its merit.

[202] Of which Sauveur may be considered the creator.

decline become, and the more clearly can we trace the connexion between the waning powers of the French, and that protective spirit which enfeebled the energies it wished to strengthen. Louis had heard that astronomy is a noble study; he was therefore anxious, by encouraging its cultivation in France, to add to the glories of his own name.[203] With this view, he rewarded its professors with unexampled profusion; he built the splendid Observatory of Paris; he invited to his court the most eminent foreign astronomers, Cassini from Italy, Römer from Denmark, Huygens from Holland. But, as to native ability, France did not produce a single man who made even one of those various discoveries which mark the epochs of astronomical science. In other countries vast progress was made; and Newton, in particular, by his immense generalizations, reformed nearly every branch of physics, and remodelled astronomy by carrying the laws of gravitation to the extremity of the solar system. On the other hand, France had fallen into such a torpor that these wonderful discoveries, which changed the face of knowledge, were entirely neglected, there being no instance of any French astronomer adopting them until 1732, that is forty-five years after they had been published by their immortal author.[204] Even in matters of detail, the most valuable improvement made by French astronomers during the power of Louis XIV. was not original. They laid claim to the invention of the micrometer, an admirable resource, which, as they supposed, was first contrived by Picard and Auzout. The truth, however, is, that here again they were anticipated by the activity of a freer and less protected

[203] A writer late in the seventeenth century says, with some simplicity, "the present king of France is reputed an encourager of choice and able men, in all faculties, who can attribute to his greatness." *Aubrey's Letters*, vol. ii. p. 624.

[204] The *Principia* of Newton appeared in 1687; and Maupertuis, in 1732, "was the first astronomer of France who undertook a critical defence of the theory of gravitation." *Grant's History of Physical Astronomy*, pp. 31, 34.

people, since the micrometer was invented by Gascoigne in or just before 1639, when the English monarch, so far from having leisure to patronize science, was about to embark in that struggle which, ten years later, cost him his crown and his life.[205]

The absence in France, during this period, not only of great discoveries, but also of mere practical ingenuity, is certainly very striking. In investigations requiring minute accuracy, the necessary tools, if at all complicated, were made by foreigners, the native workmen being too unskilled to construct them; and Dr Lister, who was a very competent judge, and who was in Paris at the end of the seventeenth century, supplies evidence that the best mathematical instruments sold in that city were made, not by a Frenchman, but by Butterfield, an Englishman residing there.[206] Nor did they succeed better in matters of immediate and obvious utility. The improvements effected in manufacture were few and insignificant, and were calculated, not for the comfort of the people, but for the luxury of the idle classes. What was really valuable was neglected; no great invention was made; and by the end of the reign of Louis XIV. scarcely any-

[205] The best account I have seen of the invention of the micrometer, is in Mr Grant's recent work, *History of Physical Astronomy*, pp. 428, 450-453, where it is proved that Gascoigne invented it in 1639, or possibly a year or two earlier. Compare *Humboldt's Cosmos*, vol. iii. p. 52; who also ascribes it to Gascoigne, but erroneously dates it in 1640. Montucla (*Hist. des Mathémat.* vol. ii. pp. 570, 571) admits the priority of Gascoigne; but underrates his merit, being apparently unacquainted with the evidence which Mr Grant subsequently adduced.

[206] Notwithstanding the strong prejudice then existing against Englishmen, Butterfield was employed by "the king and all the princes." *Lister's Account of Paris at the close of the seventeenth century, edited by Dr Henniny*, p. 85. Fontenelle mentions "M. Hubin," as one of the most celebrated makers in Paris in 1687 (*Eloge d'Amontons*, in *Œuvres de Fontenelle*, Paris, 1766, vol. v. p. 113); but has forgotten to state that he too was an Englishman. Thus, again, in regard to time-keepers, the vast superiority of the English makers, late in the reign of Louis XIV., was equally incontestable.

thing had been done in machinery, or in those other contrivances which, by economizing national labour, increase national wealth.

While such was the state, not only of mathematical and astronomical science, but also of mechanical and inventive arts, corresponding symptoms of declining power were seen in other departments. In physiology, in anatomy, and in medicine, we look in vain for any men equal to those by whom France had once been honoured. The greatest discovery of this kind ever made by a Frenchman, was that of the receptacle of the chyle; a discovery which, in the opinion of a high authority, is not inferior to that of the circulation of the blood by Harvey. This important step in our knowledge is constantly assigned to the age of Louis XIV., as if it were one of the results of his gracious bounty; but it would be difficult to tell what Louis had to do with it, since the discovery was made by Pecquet in 1647,[207] when the great king was nine years old. After Pecquet, the most eminent of the French anatomists in the seventeenth century was Riolan; and his name we also find among the illustrious men who adorned the reign of Louis XIV. But the principal works of Riolan were written before Louis XIV. was born; his last work was published in 1652; and he himself died in 1657. Then there came a pause, and, during three generations, the French did nothing for these great subjects; they wrote no work upon them which is now read, they made no discoveries, and they seemed to have lost all heart, until that revival of knowledge, which, as we shall presently see, took place in France about the middle of the eighteenth century. In the practical parts of medicine, in its speculative parts, and in the arts connected with surgery, the same law prevails. The French, in these, as in other matters, had formerly

[207] Henle (*Anatomie Générale*, vol. ii. p. 106) says, that the discovery was made in 1649; but the historians of medicine assign it to 1647. *Sprengel Hist. de la Médecine*, vol. iv. pp. 207, 405.

produced men of great eminence, who had won for themselves an European reputation, and whose works are still remembered. Thus, only to mention two or three instances, they had a long line of illustrious physicians, among whom Fernel and Joubert were the earliest; they had, in surgery, Ambroise Paré, who not only introduced important practical improvements,[208] but who has the still rarer merit of being one of the founders of comparative osteology; and they had Baillou, who, late in the sixteenth and early in the seventeenth century, advanced pathology by connecting it with the study of morbid anatomy. Under Louis XIV. all this was changed. Under him, surgery was neglected, though in other countries its progress was rapid.[209] The English, by the middle of the seventeenth century, had taken considerable steps in medicine; its therapeutical branch being reformed chiefly by Sydenham, its physiological branch by Glisson.[210] But the age of Louis XIV. cannot boast of a single medical writer who can be compared to these; not even one whose name is now known as having made any specific addition to our knowledge. In Paris, the practice of medicine was notoriously inferior to that in the capitals of Germany, Italy and England; while in the French

[208] Sir Benjamin Brodie (*Lectures on Surgery*, p. 21) says, "Few greater benefits have been conferred on mankind than that for which we are indebted to Ambrose Parey—the application of a ligature to a bleeding artery."

[209] "The most celebrated surgeon of the sixteenth century was Ambroise Paré. . . . From the time of Paré until the commencement of the eighteenth century, surgery was but little cultivated in France. Mauriceau, Saviard, and Belloste, were the only French surgeons of note who could be contrasted with so many eminent men of other nations. During the eighteenth century, France produced two surgeons of extraordinary genius; these are Petit and Desault." *Bowman's Surgery*, in *Encyclop. of Medical Sciences*, 1847, 4to, pp. 829, 830.

[210] It is unnecessary to adduce evidence respecting the services rendered by Sydenham, as they are universally admitted; but what, perhaps, is less generally known, is, that Glisson anticipated those important views concerning irritability, which were afterwards developed by Haller and Gorter.

provinces, the ignorance, even of the best physicians, was scandalous.[211] Indeed, it is no exaggeration to say that, during the whole of this long period, the French in these matters effected comparatively nothing; they made no contributions to clinical literature,[212] and scarcely any to therapeutics, to pathology, to physiology or to anatomy.[213]

In what are called the natural sciences, we also find the French now brought to a stand. In zoology, they had formerly possessed remarkable men, among whom Belon and Rondelet were the most conspicuous; but, under Louis XIV., they did not produce one original observer in this great field of inquiry.[214] In chemistry, again, Rey had, in the reign of Louis XIII., struck out views of such vast importance, that he anticipated some of those generalizations which formed the glory of the French intellect in the eighteenth century. During the corrupt and frivolous age of Louis XIV., all this was forgotten; the labours of Rey were neglected; and so complete was the indifference, that even the celebrated experiments of Boyle remained unknown in France for more than forty years after they were published.

[211] Of this, we have numerous complaints from foreigners who visited France. I will quote the testimony of one celebrated man. In 1699, Addison writes from Blois: "I made use of one of the physicians of this place, who are as cheap as our English farriers, and generally as ignorant." *Aikin's Life of Addison*, vol. i. p. 74.

[212] Indeed, France was the last great country in Europe in which a chair of clinical medicine was established.

[213] M. Bouillaud, in his account of the state of medicine in the seventeenth century, does not mention a single Frenchman during this period. During many years of the power of Louis XIV., the French academy only possessed one anatomist: and of him, few students of physiology have ever heard: "M. du Verney fut assez long-temps le seul anatomiste de l'académie, et ce ne fut qu'en 1684 qu'on lui joignit M. Mery." *Éloge de Du Verney*, in *Œuvres de Fontenelle*, vol. vi. p. 392.

[214] After Belon, nothing was done in France for the natural history of animals until 1734, when there appeared the first volume of Reaumur's great work.

Connected with zoology, and, to a philosophic mind, inseparable from it, is botany; which, occupying a middle place between the animal and mineral world, indicates their relation to each other, and at different points touches the confines of both. It also throws great light on the functions of nutrition,[215] and on the laws of development; while, from the marked analogy between animals and vegetables, we have every reason to hope that its further progress, assisted by that of electricity, will prepare the way for a comprehensive theory of life, to which the resources of our knowledge are still unequal, but towards which the movements of modern science are manifestly tending. On these grounds, far more than for the sake of practical advantages, botany will always attract the attention of thinking men; who, neglecting views of immediate utility, look to large and ultimate results, and only value particular facts in so far as they facilitate the discovery of general truths. The first step in this noble study was taken towards the middle of the sixteenth century, when authors, instead of copying what previous writers had said, began to observe nature for themselves.[216] The next step was, to add experiment to observation; but it required another hundred years before this could be done with accuracy; because the microscope, which is essential to such inquiries, was only invented about 1620, and the labour of a whole generation was needed to make it available for minute investigations.[217] So soon, however, as this resource was sufficiently matured to be applied to plants, the march of botany became rapid, at least as far as details are concerned;

[215] The highest present generalizations of the laws of nutrition are those by M. Chevreul.

[216] Brunfels in 1530, and Fuchs in 1542, were the two first writers who observed the vegetable kingdom for themselves, instead of copying what the ancients had said.

[217] The microscope was exhibited in London, by Drebbel, about 1620; and this appears to be the earliest unquestionable notice of its use, though some writers assert that it was invented at the beginning of the seventeenth century, or even in 1590.

for it was not until the eighteenth century that the facts were actually generalized. But, in the preliminary work of accumulating the facts, great energy was shown; and, for reasons stated in an earlier part of the Introduction, this, like other studies relating to the external world, advanced with peculiar speed during the reign of Charles II. The tracheæ of plants were discovered by Henshaw in 1661; and their cellular tissue by Hooke in 1667. These were considerable approaches towards establishing the analogy between plants and animals; and, within a few years, Grew effected still more of the same kind. He made such minute and extensive dissections, as to raise the anatomy of vegetables to a separate study, and prove that their organization is scarcely less complicated than that possessed by animals.[218] His first work was written in 1670;[219] and, in 1676, another Englishman, Millington, ascertained the existence of a distinction of sexes;[220] thus supplying further evidence of the harmony between the animal and vegetable kingdoms, and of unity of idea which regulates their composition.

This is what was effected in England during the reign of Charles II.; and we now ask what was done in France, during the same period, under the munificent patronage of Louis XIV. The answer is, nothing: no

[218] Dr Thomson (*Vegetable Chemistry*, p. 950) says: "But the person to whom we are indebted for the first attempt to ascertain the structure of plants by dissection and microscopical observations, was Dr Nathaniel Grew." The character of Grew's inquiries, as "viewing the internal, as well as external parts of plants," is also noticed in *Ray's Correspond.* p. 188; and M. Winckler (*Gesch. der Botanik*, p. 382) ascribes to him and Malpighi the "neuen Aufschwung" taken by vegetable physiology late in the seventeenth century.

[219] The first book of his Anatomy of Plants was laid before the Royal Society in 1670, and printed in 1671.

[220] "The presence of sexual organs in plants was first shown in 1676, by Sir Thomas Millington; and it was afterwards confirmed by Grew, Malpighi, and Ray." *Balfour's Botany*, p, 236. Before this, the sexual system of vegetables had been empirically known to several of the ancients, but never raised to a scientific truth.

discovery, no idea, which forms an epoch in this important department of natural science. The son of the celebrated Sir Thomas Browne visited Paris in the hope of making some additions to his knowledge of botany, which he thought he could not fail to do in a country where science was held in such honour, its professors so caressed by the court, and its researches so bountifully encouraged. To his surprise, he, in 1665, found in that great city no one capable of teaching his favourite pursuit, and even the public lectures on it miserably meagre and unsatisfactory.[221] Neither then, nor at a much later period, did the French possess a good popular treatise on botany: still less did they make any improvement in it. Indeed, so completely was the philosophy of the subject misunderstood, that Tournefort, the only French botanist of repute in the reign of Louis, actually rejected that discovery of the sexes of plants, which had been made before he began to write, and which afterwards became the corner-stone of the Linnean system.[222] This showed his incapacity for those large views respecting the unity of the organic world, which alone give to botany a scientific value; and we find, accordingly, that he did nothing for the physiology of plants, and that his only merit was as a collector and classifier of them.[223] And even in his classification he was guided, not by a comprehensive comparison of their various parts, but by considerations drawn from the mere appearance of the flower: thus depriving botany of its

[221] In July 1665, he writes from Paris to his father, "The lecture of plants here is only the naming of them, their degrees in heat and cold, and sometimes their use in physick; scarce a word more than may be seen in every herball." *Browne's Works*, vol. i. p. 108.

[222] Cuvier, mentioning the inferiority of Tournefort's views to those of his predecessors, gives as an instance, "puisqu'il a rejeté les sexes des plantes." *Hist. des Sciences*, part ii. p. 496. Hence he held that the farina was excrementitious. *Pulteney's Progress of Botany*, vol. i. p. 340.

[223] This is admitted even by his eulogist Duvau. *Biog. Univ.* vol. xlvi. p. 363.

real grandeur, degrading it into an arrangement of beautiful objects, and supplying another instance of the way in which the Frenchmen of that generation impoverished what they sought to enrich, and dwarfed every topic, until they suited the intellect and pleased the eye of that ignorant and luxurious court, to whose favour they looked for reward, and whose applause it was the business of their life to gain.

The truth is, that in these, as in all matters of real importance, in questions requiring independent thought, and in questions of practical utility, the age of Louis XIV. was an age of decay: it was an age of misery, of intolerance and oppression; it was an age of bondage, of ignominy, of incompetence. This would long since have been universally admitted, if those who have written the history of that period had taken the trouble to study subjects without which no history can be understood; or I should rather say, without which no history can exist. If this had been done, the reputation of Louis XIV. would at once have shrunk to its natural size. Even at the risk of exposing myself to the charge of unduly estimating my own labours, I cannot avoid saying, that the facts which I have just pointed out have never before been collected, but have remained isolated in the text-books and repertories of the sciences to which they belong. Yet without them it is impossible to study the age of Louis XIV. It is impossible to estimate the character of any period except by tracing its development; in other words, by measuring the extent of its knowledge. Therefore it is, that to write the history of a country without regard to its intellectual progress, is as if an astronomer should compose a planetary system without regard to the sun, by whose light alone the planets can be seen, and by whose attraction they are held in their course, and compelled to run in the path of their appointed orbits. For the great luminary, even as it shines in the heavens, is not a more noble or a more powerful object than is the intellect of man in this nether world. It is to the human intellect, and to that alone, that

every country owes its knowledge. And what is it but the progress and diffusion of knowledge which has given us our arts, our sciences, our manufactures, our laws, our opinions, our manners, our comforts, our luxuries, our civilization; in short, everything that raises us above the savages, who by their ignorance are degraded to the level of the brutes with which they herd? Surely, then, the time has now arrived when they who undertake to write the history of a great nation should occupy themselves with those matters by which alone the destiny of men is regulated, and should abandon the petty and insignificant details by which we have too long been wearied; details respecting the lives of kings, the intrigues of ministers, the vices and the gossip of courts.

It is precisely these higher considerations which furnish the key to the history of the reign of Louis XIV. In that time, as in all others, the misery of the people and the degradation of the country followed the decline of the national intellect; while this last was, in its turn, the result of the protective spirit—that mischievous spirit which weakens whatever it touches. If in the long course and compass of history there is one thing more clear than another, it is, that whenever a government undertakes to protect intellectual pursuits, it will almost always protect them in the wrong place, and reward the wrong men. Nor is it surprising that this should be the case. What can kings and ministers know about those immense branches of knowledge, to cultivate which with success is often the business of an entire life? How can they, constantly occupied with their lofty pursuits, have leisure for such inferior matters? Is it to be supposed that such acquirements will be found among statesmen, who are always engaged in the most weighty concerns; sometimes writing despatches, sometimes making speeches, sometimes organizing a party in the parliament, sometimes baffling an intrigue in the privy chamber? Or if the sovereign should graciously bestow his patronage according to his own judgment,

are we to expect that mere philosophy and science should be familiar to high and mighty princes, who have their own peculiar and arduous studies, and who have to learn the mysteries of heraldry, the nature and dignities of rank, the comparative value of the different orders, decorations and titles, the laws of precedence, the prerogatives of noble birth, the names and powers of ribands, stars and garters, the various modes of conferring an honour or installing into an office, the adjustment of ceremonies, the subtleties of etiquette, and all those other courtly accomplishments necessary to the exalted functions which they perform?

The mere statement of such questions proves the absurdity of the principle which they involve. For, unless we believe that kings are omniscient as well as immaculate, it is evident that in the bestowal of rewards they must be guided either by personal caprice or by the testimony of competent judges. And since no one is a competent judge of scientific excellence unless he is himself scientific, we are driven to this monstrous alternative, that the rewards of intellectual labour must be conferred injudiciously, or else that they must be given according to the verdict of that very class by whom they are received. In the first case, the reward will be ridiculous; in the latter case, it will be disgraceful. In the former case, weak men will be benefited by wealth which is taken from industry to be lavished on idleness. But in the latter case, those men of real genius, those great and illustrious thinkers, who are the masters and teachers of the human race, are to be tricked out with trumpery titles; and after scrambling in miserable rivalry for the sordid favours of a court, they are then to be turned into beggars of the state, who not only clamour for their share of the spoil, but even regulate the proportions into which the shares are to be divided.

Under such a system, the natural results are, first, the impoverishment and servility of genius; then the decay of knowledge; then the decline of the country.

Three times in the history of the world has this experiment been tried. In the ages of Augustus, of Leo X., and of Louis XIV., the same method was adopted, and the same result ensued. In each of these ages there was much apparent splendour immediately succeeded by sudden ruin. In each instance, the brilliancy survived the independence; and in each instance, the national spirit sank under that pernicious alliance between government and literature; by virtue of which the political classes become very powerful, and the intellectual classes very weak, simply because they who dispense the patronage will, of course, receive the homage; and if, on the one hand, government is always ready to reward literature, so, on the other hand, will literature be always ready to succumb to government.

Of these three ages, that of Louis XIV. was incomparably the worst; and nothing but the amazing energy of the French people could have enabled them to rally, as they afterwards did, from the effects of so enfeebling a system. But though they rallied, the effort cost them dear. The struggle, as we shall presently see, lasted two generations, and was only ended by that frightful Revolution which formed its natural climax. What the real history of that struggle was, I shall endeavour to ascertain towards the conclusion of this volume. Without, however, anticipating the course of affairs, we will now proceed to what I have already mentioned, as the second great characteristic of the reign of Louis XIV.

II. The second intellectal characteristic of the reign of Louis XIV. is, in importance, hardly inferior to the first. We have already seen that the national intellect, stunted by the protection of the court, was so diverted from the noblest branches of knowledge, that in none of them did it produce anything worthy of being recorded. As a natural consequence, the minds of men, driven from the higher departments, took refuge in the lower, and concentrated themselves upon those inferior subjects, where the discovery of truth is not

the main object, but where beauty of form and expression are the things chiefly pursued. Thus, the first consequence of the patronage of Louis XIV. was to diminish the field for genius, and to sacrifice science to art. The second consequence was, that, even in art itself, there was soon seen a marked decay. For a short time, the stimulus produced its effect; but was followed by that collapse which is its natural result. So essentially vicious is the whole system of patronage and reward, that after the death of those writers and artists, whose works form the only redeeming point in the reign of Louis, there was found no one capable of even imitating their excellences. The poets, dramatists, painters, musicians, sculptors, architects, were, with hardly an exception, not only born, but educated under that freer policy, which existed before his time. When they began their labours, they benefited by a munificence which encouraged the activity of their genius. But in a few years, that generation having died off, the hollowness of the whole system was clearly exposed. More than a quarter of a century before the death of Louis XIV., most of these eminent men had ceased to live; and then it was seen to how miserable a plight the country was reduced under the boasted patronage of the great king. At the moment when Louis XIV. died, there was scarcely a writer or an artist in France who enjoyed an European reputation. This is a circumstance well worth our notice. If we compare the different classes of literature, we shall find that sacred oratory, being the least influenced by the king, was able the longest to bear up against his system. Massillon belongs partly to the subsequent reign; but even of the other great divines, Bossuet and Bourdaloue both lived to 1704, Mascaron to 1703, and Flechier to 1710. As, however, the king, particularly in his latter years, was very fearful of meddling with the church, it is in profane matters that we can best trace the workings of his policy, because it is there that his interference was most active. With a view to this, the simplest plan will be, to look, in

the first place, into the history of the fine arts; and after ascertaining who the greatest artists were, observe the year in which they died, remembering that the government of Louis XIV. began in 1661, and ended in 1715.

If, now, we examine this period of fifty-four years, we shall be struck by the remarkable fact, that everything which is celebrated, was effected in the first half of it; while more than twenty years before its close, the most eminent masters all died without leaving any successors. The six greatest painters in the reign of Louis XIV. were Poussin, Lesueur, Claude Lorraine, Le Brun, and the two Mignards. Of these, Le Brun died in 1690; the elder Mignard in 1668; the younger in 1695; Claude Lorraine in 1682;[224] Lesueur in 1655; and Poussin, perhaps the most distinguished of all the French school, died in 1665.[225] The two greatest architects were, Claude Perrault and Francis Mansart; but Perrault died in 1688, Mansart in 1666; and Blondel, the next in fame, died in 1686. The greatest of all the sculptors was Puget, who died in 1694. Lulli, the founder of French music, died in 1687. Quinault, the greatest poet of French music, died in 1688. Under these eminent men, the fine arts in the reign of Louis XIV., reached their zenith; and during the last thirty years of his life, their decline was portentously rapid. This was the case, not only in architecture and music, but even in painting, which, being more subservient than they are to personal vanity, is more likely to flourish under a rich and despotic government. The

[224] "His best pictures were painted from about 1640 to 1660; he died in 1682." *Wornum's Epochs of Painting*, Lond. 1847, p. 399. Voltaire (*Siècle de Louis XIV.*, in *Œuvres*, vol. xix. p. 205) says that he died in 1678.

[225] *Biog. Univ.* vol. xxxv. p. 579. Poussin was Barry's "favourite" painter. *Letter from Barry*, in *Burke's Correspond.* vol. i. p. 88. Sir Joshua Reynolds (*Works*, vol i. pp. 97, 351, 376) appears to have preferred him to any of the French school; and in the report presented to Napoleon by the Institute, he is the only French painter mentioned by the side of the Greek and Italian artists.

genius, however, of painters fell so low, that long before the death of Louis XIV., France ceased to possess one of any merit; and when his successor came to the throne, this beautiful art was, in that great country, almost extinct.[226]

These are startling facts; not matters of opinion, which may be disputed, but stubborn dates, supported by irrefragable testimony. And if we examine in the same manner the literature of the age of Louis XIV., we shall arrive at similar conclusions. If we ascertain the dates of those masterpieces which adorn his reign, we shall find that, during the last five-and-twenty years of his life, when his patronage had been the longest in operation, it was entirely barren of results; in other words, that when the French had been most habituated to his protection, they were least able to effect great things. Louis XIV. died in 1715. Racine produced *Phèdre* in 1677; *Andromaque* in 1667; *Athalie* in 1691. Molière published the *Misanthrope* in 1666; *Tartuffe* in 1667; the *Avare* in 1668. The *Lutrin* of Boileau was written in 1674; his best Satires in 1666. The last Fables of La Fontaine appeared in 1678, and his last Tales in 1671. The *Inquiry respecting Truth*, by Malebranche, was published in 1674; the *Caractères* of La Bruyère in 1687; the *Maximes* of Rochefoucauld in 1665. The *Provincial Letters* of Pascal were written in 1656, and he himself died in 1662. As to Corneille, his great Tragedies were composed, some while Louis was still a boy, and the others before the king was born.[227] Such were the dates of the masterpieces of the age of Louis XIV. The authors of these immortal

[226] "When Louis XV. ascended the throne, painting in France was in the lowest state of degradation." *Lady Morgan's France*, vol. ii. p. 31. Thus too Barrington (*Observations on the Statutes*, p. 377), "It is very remarkable that the French school hath not produced any very capital painters since the expensive establishment by Louis XIV. of the academies at Rome and Paris."

[227] *Polyeucte*, which is probably his greatest work, appeared in 1540; *Médée* in 1635; *The Cid* in 1636; *Horace* and *Cinna* both in 1639.

works all ceased to write, and nearly all ceased to live, before the close of the seventeenth century; and we may fairly ask the admirers of Louis XIV. who those men were that succeeded them. Where have their names been registered? Where are their works to be found? Who is there that now reads the books of those obscure hirelings, who for so many years thronged the court of the great king? Who has heard anything of Campistron, La Chapelle, Genest, Ducerceau, Dancourt, Danchet, Vergier, Catrou, Chaulieu, Legendre, Valincour, Lamotte, and the other ignoble compilers, who long remained the brightest ornaments of France? Was this, then, the consequence of the royal bounty? Was this the fruit of the royal patronage? If the system of reward and protection is really advantageous to literature and to art, how is it that it should have produced the meanest results when it had been the longest in operation? If the favour of kings is, as their flatterers tell us, of such importance, how comes it that the more the favour was displayed, the more the effects were contemptible?

Nor was this almost inconceivable penury compensated by superiority in any other department. The simple fact is, that Louis XIV. survived the entire intellect of the French nation, except that small part of it which grew up in opposition to his principles, and afterwards shook the throne of his successor.[228] Several years before his death, and when his protective system had been in full force for nearly half a century, there was not to be found in the whole of France a statesman who could develop the resources of the country, or a general who could defend it against its enemies. Both in the civil service and in the military service, everything had fallen into disorder. At home there was nothing but confusion; abroad there was nothing but disaster. The spirit of

[228] Voltaire (*Siècle de Louis XIV.*, in *Œuvres*, vol. xx. pp. 319-322) reluctantly confesses the decline of the French intellect in the latter part of the reign of Louis; and Flassan (*Diplomat. Franç.* vol. iv. p. 400) calls it "remarquable."

France succumbed, and was laid prostrate. The men of letters, pensioned and decorated by the court, had degenerated into a fawning and hypocritical race, who, to meet the wishes of their masters, opposed all improvement, and exerted themselves in support of every old abuse. The end of all this was, a corruption, a servility, and a loss of power more complete than has ever been witnessed in any of the great countries of Europe. There was no popular liberty; there were no great men; there was no science; there was no literature; there were no arts. Within, there was a discontented people, a rapacious government, and a beggared exchequer. Without, there were foreign armies, which pressed upon all the frontiers, and which nothing but their mutual jealousies, and a change in the English cabinet, prevented from dismembering the monarchy of France.[229]

Such was the forlorn position of that noble country towards the close of the reign of Louis XIV.[230] The

[229] "Oppressed by defeats abroad, and by famine and misery at home, Louis was laid at the mercy of his enemies; and was only saved by a party revolution in the English ministry." *Arnold's Lectures on Modern History*, p. 137.

[230] For evidence of the depression and, indeed, utter exhaustion of France during the latter years of Louis XIV., compare *Duclos, Mémoires*, vol. i. pp. 11-18, with *Marmontel Hist. de la Régence*, Paris, 1826, pp. 79-97. The *Lettres inédites de Madame de Maintenon* (vol. i. pp. 263, 284, 358, 389, 393, 408, 414, 422, 426, 447, 457, 463, vol. ii. pp. 19, 23, 33, 46, 56, and numerous other passages) fully confirm this, and, moreover, prove that in Paris, early in the eighteenth century, the resources, even of the wealthy classes, were beginning to fail; while both public and private credit were so shaken, that it was hardly possible to obtain money on any terms.

In regard to the people generally, the French writers supply us with little information, because in that age they were too much occupied with their great king and their showy literature, to pay attention to mere popular interests. But I have collected from other sources some information which I will now put together, and which I recommend to the notice of the next French author who undertakes to compose a history of Louis XIV.

Locke, who was travelling in France in 1676 and 1677, writes

misfortunes which embittered the declining years of the king were, indeed, so serious, that they could not fail to excite our sympathy, if we did not know that they were the result of his own turbulent ambition, of his insufferable arrogance, but, above all, of a grasping and restless vanity, which, making him eager to concentrate on his single person all the glory of

in his journal, "The rent of lands in France fallen one-half in these few years, by reason of the poverty of the people." *King's Life of Locke*, vol. i. p. 129. About the same time, Sir William Temple says (*Works*, vol. ii. p. 268), "The French peasantry are wholly dispirited by labour and want." In 1691, another observer, proceeding from Calais, writes, "From hence, travelling to Paris, there was opportunity enough to observe what a prodigious state of poverty the ambition and absoluteness of a tyrant can reduce an opulent and fertile country to. There were visible all the marks and signs of a growing misfortune; all the dismal indications of an overwhelming calamity. The fields were uncultivated, the villages unpeopled, the houses dropping to decay." *Burton's Diary*, note by Rutt, vol. iv. p. 79. In a tract published in 1689, the author says (*Somers Tracts*, vol. x. p. 264), "I have known in France poor people sell their beds, and lie upon straw; sell their pots, kettles, and all their necessary household goods, to content the unmerciful collectors of the king's taxes." Dr Lister, who visited Paris in 1698, says, "Such is the vast multitude of poor wretches in all parts of this city, that whether a person is in a carriage or on foot, in the street, or even in a shop, he is alike unable to transact business, on account of the importunities of mendicants." *Lister's Account of Paris*, p. 46. In 1708, Addison, who, from personal observation, was well acquainted with France, writes: "We think here as you do in the country, that France is on her last legs." *Aikin's Life of Addison*, vol. i. p. 233. Finally, in 1718—that is, three years after the death of Louis—Lady Mary Montagu gives the following account of the result of his reign, in a letter to Lady Rich, dated Paris, 10th October 1718: "I think nothing so terrible as objects of misery, except one had the godlike attribute of being able to redress them; and all the country villages of France show nothing else. While the post-horses are changed, the whole town comes out to beg, with such miserable starved faces, and thin, tattered clothes, they need no other eloquence to persuade one of the wretchedness of their condition." *Works of Lady Mary Wortley Montagu*, vol. iii. p. 74, edit. 1803.

France, gave rise to that insidious policy, which, with gifts, with honours, and with honied words, began by gaining the admiration of the intellectual classes, then made them courtly and time-serving, and ended by destroying all their boldness, stifling every effort of original thought, and thus postponing for an indefinite period the progress of national civilization.

CHAPTER V

DEATH OF LOUIS XIV. REACTION AGAINST THE PROTECTIVE SPIRIT, AND PREPARATIONS FOR THE FRENCH REVOLUTION.

AT length Louis XIV. died. When it was positively known that the old king had ceased to breathe, the people went almost mad with joy. The tyranny which had weighed them down was removed; and there at once followed a reaction which, for sudden violence, has no parallel in modern history. The great majority indemnified themselves for their forced hypocrisy by indulging in the grossest licentiousness. But among the generation then forming, there were some high-spirited youths, who had far higher views, and whose notions of liberty were not confined to the license of the gaming-house and the brothel. Devoted to the great idea of restoring to France that freedom of utterance which it had lost, they naturally turned their eyes towards the only country where the freedom was practised. Their determination to search for liberty in the place where alone it could be found, gave rise to that junction of the French and English intellects which, looking at the immense chain of its effects, is by far the most important fact in the history of the eighteenth century.

During the reign of Louis XIV., the French, puffed up by national vanity, despised the barbarism of a people who were so uncivilized as to be always turning on their rulers, and who, within the space of forty years, had executed one king, and deposed another.[231]

[231] The shock which these events gave to the delicacy of the French mind was very serious. The learned Saumaise declared

They could not believe that such a restless horde possessed anything worthy the attention of enlightened men. Our laws, our literature, and our manners, were perfectly unknown to them; and I doubt if at the end of the seventeenth century, there were, either in literature or in science, five persons in France acquainted with the English language.[232] But a long

that the English are "more savage than their own mastiffs." *Carlyle's Cromwell*, vol. i. p. 444. Another writer said that we were "barbares révoltés"; and "les barbares sujets du roi." *Mém. de Motteville*, vol. ii. pp. 105, 362. Patin likened us to the Turks; and said, that having executed one king, we should probably hang the next. *Lettres de Patin*, vol. i. p. 261, vol. ii. p. 518, vol. iii. p. 148. After we had sent away James II., the indignation of the French rose still higher, and even the amiable Madame Sevigné, having occasion to mention Mary the wife of William III., could find no better name for her than Tullia: "la joie est universelle de la déroute de ce prince, dont la femme est une Tullie." *Lettres de Sevigné*, vol. v. p. 179. Another influential French lady mentions "la férocité des Anglais." *Lettres inédites de Maintenon*, vol. i. p. 303; and elsewhere (p. 109), je hais les Anglais comme le peuple. . . . Véritablement je ne les puis souffrir."

I will only give two more illustrations of the wide diffusion of such feelings. In 1679, an attempt was made to bring bark into discredit as a "remède anglais" (*Sprengel, Hist. de la Médecine*, vol. v. p. 430); and at the end of the seventeenth century, one of the arguments in Paris against coffee was that the English liked it. *Monteil, Divers Etats*, vol. vii. p. 216.

[232] The French, during the reign of Louis XIV., principally knew us from the accounts given by two of their countrymen, Monconys and Sorbière; both of whom published their travels in England, but neither of whom were acquainted with the English language.

When Prior arrived at the court of Louis XIV. as plenipotentiary, no one in Paris was aware that he had written poetry (*Lettres sur les Anglais*, in *Œuvres de Voltaire*, vol. xxvi. p. 130); and when Addison, being in Paris, presented Boileau with a copy of the *Musæ Anglicanæ*, the Frenchman learnt for the first time that we had any good poets: "first conceived an opinion of the English genius for poetry." Tickell's statement, in *Aikin's Life of Addison*, vol. i. p. 65. Finally, it is said that Milton's *Paradise Lost* was not even known by report in France until after the death of Louis XIV., though the poem was published in 1667, and the king died in 1715.

experience of the reign of Louis XIV. induced the French to reconsider many of their opinions. It induced them to suspect that despotism may have its disadvantages, and that a government composed of princes and bishops is not necessarily the best for a civilized country. They began to look, first with complacency, and then with respect, upon that strange and outlandish people, who, though only separated from themselves by a narrow sea, appeared to be of an altogether different kind; and who, having punished their oppressors, had carried their liberties and their prosperity to a height of which the world had seen no example. These feelings, which, before the Revolution broke out, were entertained by the whole of the educated classes in France, were, in the beginning, confined to those men whose intellects placed them at the head of their age. During the two generations which elapsed between the death of Louis XIV. and the outbreak of the Revolution, there was hardly a Frenchman of eminence who did not either visit England or learn English; while many of them did both. Buffon, Brissot, Broussonnet, Condamine, Delisle, Elie de Beaumont, Gournay, Helvétius, Jussieu, Lalande, Lafayette, Larcher, L'Héritier, Montesquieu, Maupertuis, Morellet, Mirabeau, Nollet, Raynal, the celebrated Roland, and his still more celebrated wife, Rousseau, Ségur, Suard, Voltaire—all these remarkable persons flocked to London, as also did others of inferior ability, but of considerable influence, such as Brequiny, Bordes, Calonne, Coyer, Cormatin, Dufay, Dumarest, Dezallier, Favier, Girod, Grosley, Godin, D'Hancarville, Hunauld, Jars, Le Blanc, Ledru, Lescallier, Linguet, Lesuire, Lemonnier, Levesque de Pouilly, Montgolfier, Morand, Patu, Poissonier, Reveillon, Septchênes, Silhouette, Siret, Soulavie, Soulès, and Valmont de Brienne.

Nearly all of these carefully studied our language, and most of them seized the spirit of our literature. Voltaire, in particular, devoted himself with his usual ardour to the new pursuit, and acquired in England a knowledge of those doctrines, the promulgation of

which afterwards won for him so great a reputation. He was the first who popularized in France the philosophy of Newton, where it rapidly superseded that of Descartes.[233] He recommended to his countrymen the writings of Locke;[234] which soon gained immense popularity, and which supplied materials to Condillac for his system of metaphysics, and to Rousseau for his theory of education. Besides this, Voltaire was the first Frenchman who studied Shakespeare; to whose works he was greatly indebted, though he afterwards wished to lessen what he considered the exorbitant respect paid to them in France. Indeed, so intimate was his knowledge of the English language,[235] that we can trace his obligations to Butler, one of the most difficult of our poets, and to Tillotson, one of the dullest of our theologians. He was acquainted with the speculations of Berkeley, the most subtle metaphysician who has ever written in English; and he had read the works, not only of Shaftesbury, but even of Chubb, Garth, Mandeville, and Woolston. Montesquieu imbibed in our country many of his principles; he studied our language; and he always expressed admiration for England, not only in his writings, but also in his private conversation. Buffon learnt English, and his first appearance as an author was as the translator of Newton and of Hales. Diderot, following in the same course, was an enthusiastic admirer of the novels of Richardson; he took the idea of several of his plays from the English

[233] After this, the Cartesian physics lost ground every day; and in *Grimm's Correspondence*, vol. ii. p. 148, there is a letter, dated Paris, 1757, which says, "Il n'y a guère plus ici de partisans de Descartes que M. de Mairan."

[234] Which he was never weary of praising; so that, as M. Cousin says (*Hist. de la Philos.* II. série, vol. ii. pp. 311, 312), "Locke est le vrai maître de Voltaire." Locke was one of the authors he put into the hands of Madame du Châtelet.

[235] There are extant many English letters written by Voltaire, which, though of course containing several errors, also contain abundant evidence of the spirit with which he seized our idiomatic expressions.

dramatists, particularly from Lillo; he borrowed many of his arguments from Shaftesbury and Collins, and his earliest publication was a translation of Stanyan's *History of Greece*.[236] Helvétius, who visited London, was never weary of praising the people; many of the views in his great work on the Mind are drawn from Mandeville; and he constantly refers to the authority of Locke, whose principles hardly any Frenchman would at an earlier period have dared to recommend. The works of Bacon, previously little known, were now translated into French; and his classification of the human faculties was made the basis of that celebrated Encyclopædia, which is justly regarded as one of the greatest productions of the eighteenth century.[237] The *Theory of Moral Sentiments*, by Adam Smith, was during thirty-four years translated three different times, by three different French authors. And such was the general eagerness, that directly the *Wealth of Nations*, by the same great writer, appeared, Morellet, who was then high in reputation, began to turn it into French; and was only prevented from printing his translation by the circumstance, that before it could be completed, another version of it was published in a French periodical. Coyer, who is still remembered for his Life of Sobieski, visited England; and, after returning to his own country, showed the direction of his studies by rendering into French the Commentaries of Blackstone. Le Blanc travelled in England, wrote a work expressly upon the English, and translated into French the Political Discourses of Hume. Holbach was certainly one of the most active leaders of the liberal party in Paris; but a large part of his very numerous writings consists solely

[236] Stanyan's *History of Greece* was once famous, and, even so late as 1804, I find Dr Parr recommending it. *Parr's Works*, vol. vii. p. 422. Diderot told Sir Samuel Romilly that he had collected materials for a history of the trial of Charles I. *Life of Romilly*, vol. i. p. 46.

[237] This is the arrangement of our knowledge under the heads of Memory, Reason and Imagination, which D'Alembert took from Bacon.

in translations of English authors. Indeed, it may be broadly stated, that while, at the end of the seventeenth century, it would have been difficult to find, even among the most educated Frenchmen, a single person acquainted with English, it would, in the eighteenth century, have been nearly as difficult to find in the same class one who was ignorant of it. Men of all tastes, and of the most opposite pursuits, were on this point united as by a common bond. Poets, geometricians, historians, naturalists, all seemed to agree as to the necessity of studying a literature on which no one before had wasted a thought. In the course of general reading, I have met with proofs that the English language was known, not only to those eminent Frenchmen whom I have already mentioned, but also to mathematicians, as D'Alembert, Darquier, Du Val le Roy, Jurain, Lachapelle, Lalande, Le Cozic, Montucla, Pezenas, Prony, Romme, and Roger Martin; to anatomists, physiologists, and writers on medicine, as Barthèz, Bichat, Bordeu, Barbeu Dubourg, Bosquillon, Bourru, Begue de Presle, Cabanis, Demours, Duplanil, Fouquet, Goulin, Lavirotte, Lassus, Petit Radel, Pinel, Roux, Sauvages, and Sue; to naturalists, as Alyon, Brémond, Brisson, Broussonnet, Dalibard, Haüy, Latapie, Richard, Rigaud, and Romé de Lisle; to historians, philologists, and antiquaries, as Barthélemy, Butel Dumont, De Brosses, Foucher, Freret, Larcher, Le Coq de Villeray, Millot, Targe, Velly, Volney, and Wailly; to poets and dramatists, as Chéron, Colardeau, Delille, Desforges, Ducis, Florian, Laborde, Lefèvre de Beauvray, Mercier, Patu, Pompignan, Quétant, Roucher, and Saint-Ange; to miscellaneous writers, as Bassinet, Baudeau, Beaulaton, Benoist, Bergier, Blavet, Bouchaud, Bougainville, Bruté, Castera, Chantreau, Charpentier, Chastellux, Contant d'Orville, De Bissy, Demeunier, Desfontaines, Devienne, Dubocage, Dupré, Duresnel, Eidous, Estienne, Favier, Flavigny, Fontanelle, Fontenay, Framery, Fresnais, Fréville, Frossard, Galtier, Garsault, Goddard, Goudar, Guénée, Guillemard, Guyard,

Jault, Imbert, Joncourt, Kéralio, Laboreau, Lacombe, Lafargue, La Montagne, Lanjuinais, Lasalle, Lasteyrie, Le Breton, Lécuy, Léonard des Malpeines, Letourneur, Linguet, Lottin, Luneau, Maillet Duclairon, Mandrillon, Marsy, Moet, Monod, Mosneron, Nagot, Peyron, Prévost, Puisieux, Rivoire, Robinet, Roger, Roubaud, Salaville, Sauseuil, Secondat, Septchènes, Simon, Soulès, Suard, Tannevot, Thurot, Toussaint, Tressan, Trochereau, Turpin, Ussieux, Vaugeois, Verlac, and Virloys. Indeed, Le Blanc, who wrote shortly before the middle of the eighteenth century, says: "We have placed English in the rank of the learned languages; our women study it, and have abandoned Italian in order to study the language of this philosophic people; nor is there to be found among us anyone who does not desire to learn it."

Such was the eagerness with which the French imbibed the literature of a people whom but a few years before they had heartily despised. The truth is, that in this new state of things they had no alternative. For, where but in England was a literature to be found that could satisfy those bold and inquisitive thinkers who arose in France after the death of Louis XIV.? In their own country there had no doubt been great displays of eloquence, of fine dramas, and of poetry, which, though never reaching the highest point of excellence, is of finished and admirable beauty. But it is an unquestionable fact, and one melancholy to contemplate, that during the sixty years which succeeded the death of Descartes, France had not possessed a single man who dared to think for himself. Metaphysicians, moralists, historians, all had become tainted by the servility of that bad age. During two generations, no Frenchman had been allowed to discuss with freedom any question either of politics or of religion. The consequence was, that the largest intellects, excluded from their legitimate field, lost their energy; the national spirit died away; the very materials and nutriment of thought seemed to be wanting. No wonder, then, if the great Frenchmen of the eighteenth century

sought that aliment abroad which they were unable to find at home. No wonder if they turned from their own land, and gazed with admiration at the only people who, pushing their inquiries into the highest departments, had shown the same fearlessness in politics as in religion; a people who, having punished their kings and controlled their clergy, were storing the treasures of their experience in that noble literature which never can perish, and of which it may be said in sober truth, that it has stimulated the intellect of the most distant races, and that, planted in America and in India, it has already fertilized the two extremities of the world.

There are, in fact, few things in history so instructive, as the extent to which France was influenced by this new pursuit. Even those who took part in actually consummating the revolution, were moved by the prevailing spirit. The English language was familiar to Carra, Dumouriez, Lafayette, and Lanthénas. Camille Desmoulins had cultivated his mind from the same source.[238] Marat travelled in Scotland as well as in England, and was so profoundly versed in our language, that he wrote two works in it; one of which, called *The Chains of Slavery*, was afterwards translated into French. Mirabeau is declared by a high authority to have owed part of his power to a careful study of the English constitution; he translated not only Watson's *History of Philip II.*, but also some parts of Milton; and it is said that when he was in the National Assembly, he delivered, as his own, passages from the speeches of Burke. Mounier was well acquainted with our language, and with our political institutions both in theory and in practice; and in a work, which

[238] The last authors he read, shortly before his execution, were Young and Hervey. *Lamartine, Hist. des Girondins*, vol. viii. p. 45. In 1769 Madame Riccoboni writes from Paris, that Young's *Night Thoughts* had become very popular there; and she justly adds, "c'est une preuve sans réplique du changement de l'esprit français." *Garrick Correspondence*, vol. ii. p. 566, 4to, 1832.

exercised considerable influence, he proposed for his own country the establishment of two chambers, to form that balance of power of which England supplied the example.[239] The same idea, derived from the same source, was advocated by Le Brun, who was a friend of Mounier's, and who, like him, had paid attention to the literature and government of the English people. Brissot knew English; he had studied in London the working of the English institutions, and he himself mentions that, in his treatise on criminal law, he was mainly guided by the course of English legislation. Condorcet also proposed as a model, our system of criminal jurisprudence, which, bad as it was, certainly surpassed that possessed by France. Madame Roland, whose position, as well as ability, made her one of the leaders of the democratic party, was an ardent student of the language and literature of the English people. She too, moved by the universal curiosity, came to our country; and, as if to show that persons of every shade and of every rank were actuated by the same spirit, the Duke of Orleans likewise visited England; nor did his visit fail to produce its natural results. "It was," says a celebrated writer, "in the society of London that he acquired a taste for liberty; and it was on his return from there that he brought into France a love of popular agitation, a contempt for his own rank, and a familiarity with those beneath him."

This language, strong as it is, will not appear exaggerated to anyone who has carefully studied the history of the eighteenth century. It is no doubt certain that the French Revolution was essentially a reaction against that protective and interfering spirit which reached its zenith under Louis XIV., but which, centuries before his reign, had exercised a most injurious influence over the national prosperity. While, however, this must be fully conceded, it is equally certain that the impetus to which

[239] Montlosier (*Monarchie Française*, vol. ii. p. 340) says, that this idea was borrowed from England; but he does not mention who suggested it.

the reaction owed its strength, proceeded from England; and that it was English literature which taught the lessons of political liberty, first to France, and through France to the rest of Europe. On this account, and not at all from mere literary curiosity, I have traced with some minuteness that union between the French and English minds, which, though often noticed, has never been examined with the care its importance deserves. The circumstances which reinforced this vast movement will be related towards the end of the volume; at present I will confine myself to its first great consequence, namely, the establishment of a complete schism between the literary men of France, and the classes who exclusively governed the country.

Those eminent Frenchmen who now turned their attention to England, found in its literature, in the structure of its society, and in its government, many peculiarities of which their own country furnished no example. They heard political and religious questions of the greatest moment debated with a boldness unknown in any other part of Europe. They heard dissenters and churchmen, whigs and tories, handling the most dangerous topics, and treating them with unlimited freedom. They heard public disputes respecting matters which no one in France dared to discuss; mysteries of state and mysteries of creed unfolded and rudely exposed to the popular gaze. And, what to Frenchmen of that age must have been equally amazing, they not only found a public press possessing some degree of freedom, but they found that within the very walls of parliament, the administration of the crown was assailed with complete impunity, the character of its chosen servants constantly aspersed, and, strange to say, even the management of its revenues effectually controlled.[240]

The successors of the age of Louis XIV. seeing these

[240] Hume, who was acquainted with several eminent French men who visited England, says (*Philosophical Works*, vol. iii. p. 8), "nothing is more apt to surprise a foreigner than the ex-

things, and seeing, moreover, that the civilization of the country increased as the authority of the upper classes and of the crown diminished, were unable to restrain their wonder at so novel and exciting a spectacle. "The English nation," says Voltaire, "is the only one on the earth, which, by resisting its kings, has succeeded in lessening their power." "How I love the boldness of the English! how I love men who say what they think!" The English, says Le Blanc, are willing to have a king, provided they are not obliged to obey him. The immediate object of their government, says Montesquieu, is political liberty; they possess more freedom than any republic; and their system is in fact a republic disguised as a monarchy. Grosley, struck with amazement, exclaims, "Property is in England a thing sacred, which the laws protect from all encroachment, not only from engineers, inspectors, and other people of that stamp, but even from the king himself." Mably, in the most celebrated of all his works, says, "The Hanoverians are only able to reign in England because the people are free, and believe they have a right to dispose of the crown. But if the kings were to claim the same power as the Stuarts, if they were to believe that the crown belonged to them by divine right, they would be condemning themselves, and confessing that they were occupying a place which is not their own." In England, says Helvétius, the people are respected; every citizen can take some part in the management of affairs; and authors are allowed to enlighten the public respecting its own interests. And Brissot, who had made these matters his especial study, cries out, "Admirable constitution! which can only be disparaged either by men who know it not, or else by those whose tongues are bridled by slavery."

Such were the opinions of some of the most celebrated Frenchmen of that time; and it would be easy

treme liberty which we enjoy in this country, of communicating whatever we please to the public, and of openly censuring every measure entered into by the king or his ministers."

to fill a volume with similar extracts. But, what I now rather wish to do, is, to point out the first great consequence of this new and sudden admiration for a country which, in the preceding age, had been held in profound contempt. The events which followed are, indeed, of an importance impossible to exaggerate; since they brought about that rupture between the intellectual and governing classes, of which the Revolution itself was but a temporary episode.

The great Frenchmen of the eighteenth century being stimulated by the example of England into a love of progress, naturally came into collision with the governing classes, among whom the old stationary spirit still prevailed. This opposition was a wholesome reaction against that disgraceful servility for which, in the reign of Louis XIV., literary men had been remarkable; and if the contest which ensued had been conducted with anything approaching to moderation, the ultimate result would have been highly beneficial; since it would have secured that divergence between the speculative and practical classes which, as we have already seen, is essential to maintain the balance of civilization, and to prevent either side from acquiring a dangerous predominance. But, unfortunately, the nobles and clergy had been so long accustomed to power, that they could not brook the slightest contradiction from those great writers, whom they ignorantly despised as their inferiors. Hence it was, that when the most illustrious Frenchmen of the eighteenth century attempted to infuse into the literature of their country a spirit of inquiry similar to that which existed in England, the ruling classes became roused into a hatred and jealousy which broke all bounds, and gave rise to that crusade against knowledge which forms the second principal precursor of the French Revolution.

The extent of that cruel persecution to which literature was now exposed, can only be fully appreciated by those who have minutely studied the history of France in the eighteenth century. For it was not a stray case of oppression, which occurred here and

there; but it was a prolonged and systematic attempt to stifle all inquiry, and punish all inquirers. If a list were drawn up of all the literary men who wrote during the seventy years succeeding the death of Louis XIV., it would be found, that at least nine out of every ten had suffered from the government some grievous injury; and that a majority of them had been actually thrown into prison. Indeed, in saying thus much, I am understating the real facts of the case; for I question if one literary man out of fifty escaped with entire impunity. Certainly, my own knowledge of those times, though carefully collected, is not so complete as I could have wished; but, among those authors who were punished, I find the name of nearly every Frenchman whose writings have survived the age in which they were produced. Among those who suffered either confiscation, or imprisonment, or exile, or fines, or the suppression of their works, or the ignominy of being forced to recant what they had written, I find, besides a host of inferior writers, the names of Beaumarchais, Berruyer, Bougeant, Buffon, D'Alembert, Diderot, Duclos, Freret, Helvétius, La Harpe, Linguet, Mably, Marmontel, Montesquieu, Mercier, Morellet, Raynal, Rousseau, Suard, Thomas, and Voltaire.

The mere recital of this list is pregnant with instruction. To suppose that all these eminent men deserved the treatment they received, would, even in the absence of direct evidence, be a manifest absurdity; since it would involve the supposition, that a schism having taken place between two classes, the weaker class was altogether wrong, and the stronger altogether right. Fortunately, however, there is no necessity for resorting to any merely speculative argument respecting the probable merits of the two parties. The accusations brought against these great men are before the world; the penalties inflicted are equally well known; and, by putting these together, we may form some idea of the state of society, in which such things could be openly practised.

Voltaire, almost immediately after the death of Louis XIV., was falsely charged with having composed a libel on that prince; and, for this imaginary offence, he, without the pretence of a trial, and without even the shadow of a proof, was thrown into the Bastille, where he was confined more than twelve months. Shortly after he was released, there was put upon him a still more grievous insult; the occurrence, and, above all, the impunity of which, supply striking evidence as to the state of society in which such things were permitted. Voltaire, at the table of the Duke de Sully, was deliberately insulted by the Chevalier de Rohan Chabot, one of those impudent and dissolute nobles who then abounded in Paris. The duke, though the outrage was committed in his own house, in his own presence, and upon his own guest, would not interfere; but seemed to consider that a poor poet was honoured by being in any way noticed by a man of rank. But, as Voltaire, in the heat of the moment, let fall one of those stinging retorts which were the terror of his enemies, the chevalier determined to visit him with further punishment. The course he adopted was characteristic of the man, and of the class to which he belonged. He caused Voltaire to be seized in the streets of Paris, and in his presence ignominiously beaten, he himself regulating the number of blows of which the chastisement was to consist. Voltaire, smarting under the insult, demanded that satisfaction which it was customary to give. This, however, did not enter into the plan of his noble assailer, who not only refused to meet him in the field, but actually obtained an order, by which he was confined in the Bastille for six months, and at the end of that time was directed to quit the country.

Thus it was that Voltaire, having first been imprisoned for a libel which he never wrote, and having then been publicly beaten because he retorted an insult wantonly put upon him, was now sentenced to another imprisonment, through the influence of the very man by whom he had been attacked. The exile which followed the

imprisonment seems to have been soon remitted; as shortly after these events, we find Voltaire again in France, preparing for publication his first historical work, a life of Charles XII. In this, there are none of those attacks on Christianity which gave offence in his subsequent writings; nor does it contain the least reflection upon the arbitrary government under which he had suffered. The French authorities at first granted that permission, without which no book could then be published; but, as soon as it was actually printed, the license was withdrawn, and the history forbidden to be circulated. The next attempt of Voltaire was one of much greater value; it was therefore repulsed still more sharply. During his residence in England, his inquisitive mind had been deeply interested by a state of things so different from any he had hitherto seen; and he now published an account of that remarkable people, from whose literature he had learned many important truths. His work, which he called *Philosophic Letters*, was received with general applause; but, unfortunately for himself, he adopted in it the arguments of Locke against innate ideas. The rulers of France, though not likely to know much about innate ideas, had a suspicion that the doctrine of Locke was in some way dangerous; and, as they were told that it was a novelty, they felt themselves bound to prevent its promulgation. Their remedy was very simple. They ordered that Voltaire should be again arrested, and that his work should be burned by the common hangman.

These repeated injuries might well have moved a more patient spirit than that of Voltaire.[241] Certainly, those who reproach this illustrious man, as if he were the instigator of unprovoked attacks upon the existing state of things, must know very little of the age in

[241] The indignation of Voltaire appears in many of his letters; and he often announced to his friends his intention of quitting for ever a country where he was liable to such treatment.

which it was his misfortune to live. Even on what has been always considered the neutral ground of physical science, there was displayed the same despotic and persecuting spirit. Voltaire, among other schemes for benefiting France, wished to make known to his countrymen the wonderful discoveries of Newton, of which they were completely ignorant. With this view, he drew up an account of the labours of that extraordinary thinker; but here again the authorities interposed, and forbade the work to be printed. Indeed, the rulers of France, as if sensible that their only security was the ignorance of the people, obstinately set their face against every description of knowledge. Several eminent authors had undertaken to execute, on a magnificent scale, an Encyclopædia, which should contain a summary of all the branches of science and of art. This, undoubtedly the most splendid enterprise ever started by a body of literary men, was at first discouraged by the government, and afterwards entirely prohibited. On other occasions, the same tendency was shown in matters so trifling, that nothing but the gravity of their ultimate results prevents them from being ridiculous. In 1770, Imbert translated Clarke's *Letters on Spain*; one of the best works then existing on that country. This book, however, was suppressed as soon as it appeared; and the only reason assigned for such a stretch of power is, that it contained some remarks respecting the passion of Charles III. for hunting, which were considered disrespectful to the French crown, because Louis XV. was himself a great hunter. Several years before this, La Bletterie, who was favourably known in France by his works, was elected a member of the French Academy. But he, it seems, was a Jansenist, and had, moreover, ventured to assert that the Emperor Julian, notwithstanding his apostasy, was not entirely devoid of good qualities. Such offences could not be overlooked in so pure an age; and the king obliged the academy to exclude La Bletterie from their society. That the punishment extended no further, was an

instance of remarkable leniency; for Fréret, an eminent critic and scholar, was confined in the Bastille, because he stated, in one of his memoirs, that the earliest Frankish chiefs had received their titles from the Romans. The same penalty was inflicted four different times upon Lenglet du Fresnoy.[242] In the case of this amiable and accomplished man, there seems to have been hardly the shadow of a pretext for the cruelty with which he was treated; though, on one occasion, the alleged offence was, that he had published a supplement to the History of De Thou.

Indeed, we have only to open the biographies and correspondence of that time, to find instances crowding upon us from all quarters. Rousseau was threatened with imprisonment, was driven from France, and his works were publicly burned. The celebrated treatise of Helvétius on the Mind, was suppressed by an order from the royal council; it was burned by the common hangman, and the author was compelled to write two letters, retracting his opinions. Some of the geological views of Buffon having offended the clergy, that illustrious naturalist was obliged to publish a formal recantation of doctrines which are now known to be perfectly accurate. The learned Observations on the History of France, by Mably, were suppressed as soon as they appeared; for what reason it would be hard to say, since M. Guizot, certainly no friend either to anarchy or to irreligion, has thought it worth while to republish them, and thus stamp them with the authority of his own great name. The History of the Indies, by Raynal, was condemned to the flames, and the author ordered to be arrested. Lanjuinais, in his well-known work on Joseph II., advocated not only religious toleration, but even the abolition of slavery; his book, therefore, was declared to be "seditious"; it was pronounced "destructive of all subordination," and was sentenced to

[242] He was imprisoned in the Bastille, for the first time, in 1725; then in 1743, in 1750, and finally in 1751.

be burned. The Analysis of Bayle, by Marsy, was suppressed, and the author was imprisoned. The History of the Jesuits, by Linguet, was delivered to the flames; eight years later, his *Journal* was suppressed; and, three years after that, as he still persisted in writing, his Political Annals were suppressed, and he himself was thrown into the Bastille. Delisle de Sales was sentenced to perpetual exile, and confiscation of all his property, on account of his work on the Philosophy of Nature.[243] The treatise by Mey, on French law, was suppressed; that by Boncerf, on feudal law, was burned. The Memoirs of Beaumarchais were likewise burned; the Eloge on Fénélon by La Harpe was merely suppressed. Duvernet having written a History of the Sorbonne, which was still unpublished, was seized and thrown into the Bastille, while the manuscript was yet in his own possession. The celebrated work of De Lolme on the English constitution was suppressed by edict directly it appeared. The fate of being suppressed, or prohibited, also awaited the Letters of Gervaise, in 1724; the Dissertations of Courayer, in 1727; the Letters of Montgon, also in 1732; the History of Tamerlane, by Margat, also in 1732; the Essay on Taste, by Cartaud, in 1736; the Life of Domat, by Prévost de la Jannès, in 1742; the History of Louis XI., by Duclos, in 1745; the Letters of Bargeton, in 1750; the Memoirs on Troyes, by Grosley, in the same year; the History of Clement XI., by Reboulet, in 1752; the School of Man, by Génard, also in 1752; the Therapeutics of Garlon, in 1756; the celebrated thesis of Louis, on Generation, in 1754; the Treatise on Presidial Jurisdiction, by Jousse, in 1755; the Ericie of Fontanelle, in 1768; the Thoughts of Jamin, in 1769; the History of Siam, by Turpin, and the Eloge of Marcus Aurelius, by Thomas, both in 1770; the works on finance, by Darigrand in 1764, and by Le Trosne in 1779; the Essay on Military Tactics, by Guibert, in

[243] According to some of these authorities, parliament afterwards revoked this sentence; but there is no doubt that the sentence was passed, and De Sales imprisoned, if not banished.

1772; the Letters of Boucquet, in the same year; and the Memoirs of Terrai, by Coquereau, in 1776. Such wanton destruction of property was, however, mercy itself, compared to the treatment experienced by other literary men in France. Desforges, for example, having written against the arrest of the Pretender to the English throne, was, solely on that account, buried in a dungeon eight feet square, and confined there for three years. This happened in 1749; and in 1770, Audra, professor at the college of Toulouse, and a man of some reputation, published the first volume of his Abridgment of General History. Beyond this, the work never proceeded; it was at once condemned by the archbishop of the diocese, and the author was deprived of his office. Audra, held up to public opprobrium, the whole of his labours rendered useless, and the prospects of his life suddenly blighted, was unable to survive the shock. He was struck with apoplexy, and within twenty-four hours was lying a corpse in his own house.

It will probably be allowed that I have collected sufficient evidence to substantiate my assertion respecting the persecutions directed against every description of literature; but the carelessness with which the antecedents of the French Revolution have been studied, has given rise to such erroneous opinions on this subject, that I am anxious to add a few more instances, so as to put beyond the possibility of doubt the nature of the provocations habitually received by the most eminent Frenchmen of the eighteenth century.

Among the many celebrated authors who, though inferior to Voltaire, Montesquieu, Buffon, and Rousseau, were second only to them, three of the most remarkable were Diderot, Marmontel, and Morellet. The first two are known to every reader; while Morellet, though comparatively forgotten, had in his own time considerable influence, and had, moreover, the distinguished merit of being the first who popularized in France those great truths which had been

recently discovered, in political economy by Adam Smith, and in jurisprudence by Beccaria.

A certain M. Cury wrote a satire upon the Duke d'Aumont, which he showed to his friend Marmontel, who, struck by its power, repeated it to a small circle of his acquaintance. The duke, hearing of this, was full of indignation, and insisted upon the name of the author being given up. This, of course, was impossible without a gross breach of confidence; but Marmontel, to do everything in his power, wrote to the duke, stating, what was really the fact, that the lines in question had not been printed, that there was no intention of making them public, and that they had only been communicated to a few of his own particular friends. It might have been supposed that this would have satisfied even a French noble; but Marmontel, still doubting the result, sought an audience of the minister, in the hope of procuring the protection of the crown. All, however, was in vain. It will hardly be believed, that Marmontel, who was then at the height of his reputation, was seized in the middle of Paris, and because he refused to betray his friend, was thrown into the Bastille. Nay, so implacable were his persecutors, that after his liberation from prison, they, in the hope of reducing him to beggary, deprived him of the right of publishing the *Mercure*, upon which nearly the whole of his income depended.

To the Abbé Morellet a somewhat similar circumstance occurred. A miserable scribbler, named Palissot, had written a comedy ridiculing some of the ablest Frenchmen then living. To this, Morellet replied by a pleasant little satire, in which he made a very harmless allusion to the Princess de Robeck, one of Palissot's patrons. She, amazed at such presumption, complained to the minister, who immediately ordered the abbé to be confined in the Bastille, where he remained for some months, although he had not only been guilty of no scandal, but had not even mentioned the name of the princess.

The treatment of Diderot was still more severe.

This remarkable man owed his influence chiefly to his immense correspondence, and to the brilliancy of a conversation for which, even in Paris, he was unrivalled, and which he used to display with considerable effect at those celebrated dinners where, during a quarter of a century, Holbach assembled the most illustrious thinkers in France. Besides this, he is the author of several works of interest, most of which are well known to students of French literature.[244] His independent spirit, and the reputation he obtained, earned for him a share in the general persecution. The first work he wrote, was ordered to be publicly burned by the common hangman.[245] This, indeed, was the fate of nearly all the best literary productions of that time; and Diderot might esteem himself fortunate in merely losing his property, provided he saved himself from imprisonment. But, a few years later, he wrote another work, in which he said that people who are born blind have some ideas different from those who are possessed of their eyesight. This assertion is by no means improbable,[246] and it contains nothing by

[244] It is also stated by the editor of his correspondence, that he wrote a great deal for authors, which they published under their name. *Mém. et Corresp. de Diderot*, vol. iii. p. 102.

[245] This was the *Pensées Philosophiques*, in 1746, his first original work; the previous ones being translations from English. *Biog. Univ.* xi. 314. Duvernet (*Vie de Voltaire*, p. 240) says, that he was imprisoned for writing it, but this I believe is a mistake; at least I do not remember to have met with the statement elsewhere, and Duvernet is frequently careless.

[246] Dugald Stewart, who has collected some important evidence on this subject, has confirmed several of the views put forward by Diderot. *Philos. of the Mind*, vol. iii. pp. 401 seq.; comp. pp. 57, 407, 435. Since then still greater attention has been paid to the education of the blind, and it has been remarked that "it is an exceedingly difficult task to teach them to think accurately." *M'Alister's Essay on the Blind*, in *Jour. of Stat. Soc.* vol. i. p. 378. These passages unconsciously testify to the sagacity of Diderot; and they also testify to the stupid ignorance of a government, which sought to put an end to such inquiries by punishing their author.

which anyone need be startled. The men, however, who then governed France, discovered in it some hidden danger. Whether they suspected that the mention of blindness was an allusion to themselves, or whether they were merely instigated by the perversity of their temper, is uncertain; at all events, the unfortunate Diderot, for having hazarded this opinion, was arrested, and without even the form of a trial, was confined in the dungeon of Vincennes. The natural results followed. The works of Diderot rose in popularity;[247] and he, burning with hatred against his persecutors, redoubled his efforts to overthrow those institutions, under shelter of which such monstrous tyranny could be safely practised.

It seems hardly necessary to say more respecting the incredible folly with which the rulers of France, by turning every able man into a personal enemy, at length arrayed against the government all the intellect of the country, and made the Revolution a matter, not of choice, but of necessity. I will, however, as a fitting sequel to the preceding facts, give one instance of the way in which, to gratify the caprice of the higher classes, even the most private affections of domestic life could be publicly outraged. In the middle of the eighteenth century, there was an actress on the French stage of the name of Chantilly. She, though beloved by Maurice de Saxe, preferred a more honourable attachment, and married Favart, the well-known writer of songs and of comic operas. Maurice, amazed at her boldness, applied for aid to the French crown. That he should have made such an application is sufficiently strange; but the result of it is hardly to be paralleled except in some eastern despotism. The government of France, on hearing the circumstance, had the inconceivable baseness to issue an order directing Favart to abandon his wife, and intrust her to the charge of Maurice, to whose embraces she was compelled to submit.

[247] A happy arrangement, by which curiosity baffles despotism. See *Grimm, Corresp.* vol. v. p. 498.

These are among the insufferable provocations, by which the blood of men is made to boil in their veins. Who can wonder that the greatest and noblest minds in France were filled with loathing at the government by whom such things were done? If we, notwithstanding the distance of time and country, are moved to indignation by the mere mention of them, what must have been felt by those before whose eyes they actually occurred? And when, to the horror they naturally inspired, there was added that apprehension of being the next victim which everyone might personally feel: when, moreover, we remember that the authors of these persecutions had none of the abilities by which even vice itself is sometimes ennobled;—when we thus contrast the poverty of their understandings with the greatness of their crimes, we, instead of being astonished that there was a revolution, by which all the machinery of the state was swept away, should rather be amazed at that unexampled patience by which alone the Revolution was so long deferred.

To me, indeed, it has always appeared, that the delay of the Revolution is one of the most striking proofs history affords of the force of established habits, and of the tenacity with which the human mind clings to old associations. For, if ever there existed a government inherently and radically bad, it was the government of France in the eighteenth century. If ever there existed a state of society likely, by its crying and accumulated evils, to madden men to desperation, France was in that state. The people, despised and enslaved, were sunk in abject poverty, and were curbed by laws of stringent cruelty, enforced with merciless barbarism. A supreme and irresponsible control was exercised over the whole country by the clergy, the nobles and the crown. The intellect of France was placed under the ban of a ruthless proscription, its literature prohibited and burned, its authors plundered and imprisoned. Nor was there the least symptom that these evils were likely to be remedied. The

upper classes, whose arrogance was increased by the long tenure of their power, only thought of present enjoyment: they took no heed of the future; they saw not that day of reckoning, the bitterness of which they were soon to experience. The people remained in slavery until the Revolution actually occurred; while as to the literature, nearly every year witnessed some new effort to deprive it of that share of liberty which it still retained. Having, in 1764, issued a decree forbidding any work to be published in which questions of government were discussed;[248] having, in 1767, made it a capital offence to write a book likely to excite the public mind; and having, moreover, denounced the same penalty of death against anyone who attacked religion, as also against anyone who spoke of matters of finance;—having taken these steps, the rulers of France, very shortly before their final fall, contemplated another measure still more comprehensive. It is, indeed, a singular fact, that only nine years before the Revolution, and when no power on earth could have saved the institutions of the country, the government was so ignorant of the real state of affairs, and so confident that it could quell the spirit which its own despotism had raised, that a proposal was made by an officer of the crown to do away with all the publishers, and not allow any books to be printed except those which issued from a press paid, appointed, and controlled by the executive magistrate.[249] This monstrous proposition, if carried

[248] "L'Averdy was no sooner named controller of finance than he published a decree, in 1764 (*arrêt du conseil*)—which, according to the state of the then existing constitution, had the force of a law—by which every man was forbidden to print, or cause to be printed, anything whatever upon administrative affairs, or government regulations in general, under the penalty of a breach of the police laws; by which the man was liable to be punished without defence, and not as was the case before the law courts, where he might defend himself, and could only be judged according to law." *Schlosser's Eighteenth Century*, vol. ii. p. 166.

[249] This was the suggestion of the avocat-général in 1780.

into effect, would of course have invested the king with all the influence which literature can command; it would have been as fatal to the national intellect as the other measures were to national liberty; and it would have consummated the ruin of France, either by reducing its greatest men to complete silence, or else by degrading them into mere advocates of those opinions which the government might wish to propagate.

For these are by no means to be considered as trifling matters, merely interesting to men of letters. In France, in the eighteenth century, literature was the last resource of liberty. In England, if our great authors should prostitute their abilities by inculcating servile opinions, the danger would no doubt be considerable, because other parts of society might find it difficult to escape the contagion. Still, before the corruption had spread, there would be time to stop its course, so long as we possessed those free political institutions, by the mere mention of which the generous imagination of a bold people is easily fired. And although such institutions are the consequence, not the cause, of liberty, they do unquestionably react upon it, and from the force of habit they could for a while survive that from which they originally sprung. So long as a country retains its political freedom, there will always remain associations by which, even in the midst of mental degradation, and out of the depths of the lowest superstition, the minds of men may be recalled to better things. But in France such associations had no existence. In France everything was for the governors, and nothing for the governed. There was neither free press, nor free parliament, nor free debates. There was no public meetings; there was no popular suffrage; there was no discussion on the hustings; there was no habeas corpus act; there was no trial by jury. The voice of liberty, thus silenced in every department of the state, could only be heard in the appeals of those great men who, by their writings, inspirited the people to resistance. This is

the point of view from which we ought to estimate the character of those who are often accused of having wantonly disturbed the ancient fabric. They, as well as the people at large, were cruelly oppressed by the crown, the nobles, and the church; and they used their abilities to retaliate the injury. There can be no doubt that this was the best course open to them. There can be no doubt that rebellion is the last remedy against tyranny, and that a despotic system should be encountered by revolutionary literature. The upper classes were to blame, because they struck the first blow; but we must by no means censure those great men, who, having defended themselves from aggression, eventually succeeded in smiting the government by whom the aggression was originally made.

Without, however, stopping to vindicate their conduct, we have now to consider what is much more important, namely, the origin of that crusade against Christianity, in which, unhappily for France, they were compelled to embark, and the occurrence of which forms the third great antecedent of the French Revolution. A knowledge of the causes of this hostility against Christianity is essential to a right understanding of the philosophy of the eighteenth century, and it will throw some light on the general theory of ecclesiastical power.

It is a circumstance well worthy of remark, that the revolutionary literature which eventually overturned all the institutions of France, was at first directed against those which were religious, rather than against those which were political. The great writers who rose into notice soon after the death of Louis XIV., exerted themselves against spiritual despotism; while the overthrow of secular despotism was left to their immediate successors.[250] This is not the course which

[250] The nature of this change, and the circumstances under which it happened, will be examined in the last chapter of the present volume; but that the revolutionary movement, while headed by Voltaire and his coadjutors, was directed against the church, and not against the state, is noticed by many

would be pursued in a healthy state of society; and there is no doubt, that to this peculiarity the crimes and the lawless violence of the French Revolution are in no small degree to be ascribed. It is evident, that in the legitimate progress of a nation, political innovations should keep pace with religious innovations, so that the people may increase their liberty while they diminish their superstition. In France, on the contrary, during nearly forty years, the church was attacked, and the government was spared. The consequence was, that the order and balance of the country were destroyed; the minds of men became habituated to the most daring speculations, while their acts were controlled by the most oppressive despotism; and they felt themselves possessed of capacities which their rulers would not allow them to employ. When, therefore, the French Revolution broke out, it was not a mere rising of ignorant slaves against educated masters, but it was a rising of men in whom the despair caused by slavery was quickened by the resources of advancing knowledge; men who were in that frightful condition when the progress of intellect outstrips the progress of liberty, and when a desire is felt, not only to remove a tyranny, but also to avenge an insult.

There can be no doubt that to this we must ascribe some of the most hideous peculiarities of the French Revolution. It, therefore, becomes a matter of great interest to inquire how it was, that while in England political freedom and religious scepticism have accompanied and aided each other, there should, on the other hand, have taken place in France a vast movement, in which, during nearly forty years, the ablest men neglected the freedom, while they encouraged the scepticism, and diminished the power of the church, without increasing the liberties of the people.

The first reason of this appears to be, the nature of

writers; some of whom have also observed, that soon after the middle of the reign of Louis XV. the ground began to be shifted, and a disposition was first shown to attack political abuses.

those ideas out of which the French had long constructed the traditions of their glory. A train of circumstances which, when treating of the protective spirit, I attempted to indicate, had secured to the French kings an authority which, by making all classes subordinate to the crown, flattered the popular vanity. Hence it was, that in France the feelings of loyalty worked into the national mind deeper than in any other country of Europe, Spain alone excepted.[251] The difference between this spirit and that observable in England has been already noticed, and may be still further illustrated by the different ways in which the two nations have dealt with the posthumous reputation of their sovereigns. With the exception of Alfred, who is sometimes called the Great,[252] we in England have not sufficiently loved any of our princes to bestow upon them titles expressive of personal admiration. But the French have decorated their kings with every variety of panegyric. Thus to take only a single name, one king is Louis the Mild, another is Louis the Saint, another is Louis the Just, another is Louis the Great, and the most hopelessly vicious of all was called Louis the Beloved.

These are facts which, insignificant as they seem, form most important materials for real history, since they are unequivocal symptoms of the state of the country in which they exist.[253] Their relation to the

[251] Not only the political history of Spain, but also its literature, contains melancholy evidence of the extraordinary loyalty of the Spaniards, and of the injurious results produced by it.

[252] Our admiration of Alfred is greatly increased by the fact, that we know very little about him. The principal authority referred to for his reign is Asser, whose work, there is reason to believe, is not genuine. It moreover appears, that some of the institutions popularly ascribed to him, existed before his time.

[253] The French writers, under the old régime, constantly boast that loyalty was the characteristic of their nation, and taunt the English with their opposite and insubordinate spirit. "Il n'est pas ici question des Français, qui se sont toujours distingués des autres nations par leur amour pour leurs rois."

subject before us is obvious. For, by them, and by the circumstances from which they sprung, an intimate and hereditary association was engendered in the minds of Frenchmen, between the glory of their nation and the personal reputation of their sovereign. The consequence was, that the political conduct of the rulers of France was protected against censure by a fence far more impassable than any that could be erected by the most stringent laws. It was protected by those prejudices which each generation bequeathed to its successor. It was protected by that halo which time had thrown round the oldest monarchy in Europe. And above all, it was protected by that miserable national vanity, which made men submit to taxation and to slavery, in order that foreign princes might be dazzled by the splendour of their sovereign, and foreign countries intimidated by the greatness of his victories.

The upshot of all this was, that when, early in the eighteenth century, the intellect of France began to be roused into action, the idea of attacking the abuses of the monarchy never occurred even to the boldest thinker. But, under the protection of the crown, there had grown up another institution, about which less delicacy was felt. The clergy, who for so long a period had been allowed to oppress the consciences of men, were not sheltered by those national associations

Le Blanc, Lettres d'un François, vol. iii. p. 523. "The English do not love their sovereigns as much as could be desired." *Sorbière's Voyage to England*, p. 58.

Now, contrast with all this the sentiments contained in one of the most celebrated histories in the English language: "There is not any one thing more certain and more evident, than that princes are made for the people, and not the people for them; and perhaps there is no nation under heaven that is more entirely possessed with this notion of princes than the English nation is in this age; so that they will soon be uneasy to a prince who does not govern himself by this maxim, and in time grow very unkind to him." *Burnet's History of my Own Times*, vol. vi. p. 223. This manly and wholesome passage was written while the French were licking the dust from the feet of Louis XIV.

which surrounded the person of the sovereign; nor had any of them, with the single exception of Bossuet, done much to increase the general reputation of France. Indeed, the French church, though during the reign of Louis XIV. it possessed immense authority, had always exercised it in subordination to the crown, at whose bidding it had not feared to oppose even the pope himself.[254] It was, therefore, natural, that in France the ecclesiastical power should be attacked before the temporal power; because, while it was as despotic, it was less influential, and because it was unprotected by those popular traditions which form the principal support of every ancient institution.

These considerations are sufficient to explain why it was that, in this respect, the French and English intellects adopted courses so entirely different. In England, the minds of men, being less hampered with the prejudices of an indiscriminate loyalty, have been able at each successive step in the great progress to direct their doubts and inquiries on politics as well as on religion; and thus establishing their freedom, as they diminished their superstition, they have maintained the balance of the national intellect, without allowing to either of its divisions an excessive preponderance. But in France the admiration for royalty had become so great, that this balance was disturbed; the inquiries of men not daring to settle on politics, were fixed on religion, and gave rise to the singular phenomenon of a rich and powerful literature, in which unanimous hostility to the church was unaccompanied by a single voice against the enormous abuses of the state.

There was likewise another circumstance, which increased this peculiar tendency. During the reign of Louis XIV. the personal character of the hierarchy had

[254] M. Ranke (*Die Päpste*, vol. ii. p. 257) ascribes this to the circumstances attending the apostasy of Henry IV.; but the cause lies much deeper, being connected with that triumph of the secular interests over the spiritual, of which the policy of Henry IV. was itself a consequence.

done much to secure their dominion. All the leaders of the church were men of virtue, and many were men of ability. Their conduct, tyrannical as it was, seems to have been conscientious; and the evils which it produced are merely to be ascribed to the gross impolicy of intrusting ecclesiastics with power. But after the death of Louis XIV. a great change took place. The clergy, from causes which it would be tedious to investigate, became extremely dissolute, and often very ignorant. This made their tyranny more oppressive, because to submit to it was more disgraceful. The great abilities and unblemished morals of men like Bossuet, Fénélon, Bourdaloue, Flechier, and Mascaron, diminished in some degree the ignominy which is always connected with blind obedience. But when they were succeeded by such bishops and cardinals as Dubois, Lafiteau, Tencin, and others who flourished under the regency, it became difficult to respect the heads of the church, tainted as they were with open and notorious depravity.[255] At the same time that there occurred this unfavourable change among the ecclesiastical rulers, there also occurred that immense reaction of which I have endeavoured to trace the early workings. It was, therefore, at the very moment when the spirit of inquiry became stronger, that the character of the clergy became more contemptible. The great writers who were now rising in France, were moved to indignation when they saw that those who usurped unlimited power over consciences had themselves no consciences at all. It is evident, that every argument which they borrowed from England against ecclesiastical power, would gain additional force when directed against men whose personal unfitness was universally acknowledged.

Such was the position of the rival parties, when,

[255] What was, if possible, still more scandalous, was, that in 1723 the assembly of the clergy elected as their president, unanimously ("d'une voix unanime"), the infamous Dubois, the most notoriously immoral man of his time. *Duclos, Mém.* vol. ii. p. 262.

almost immediately after the death of Louis XIV., there began that great struggle between authority and reason, which is still unfinished, although in the present state of knowledge its result is no longer doubtful. On the one side there was a compact and numerous priesthood, supported by the prescription of centuries and by the authority of the crown. On the other side there was a small body of men, without rank, without wealth, and as yet without reputation, but animated by a love of liberty and by a just confidence in their own abilities. Unfortunately, they at the very outset committed a serious error. In attacking the clergy, they lost their respect for religion. In their determination to weaken ecclesiastical power, they attempted to undermine the foundations of Christianity. This is deeply to be regretted for their own sake, as well as for its ultimate effects in France; but it must not be imputed to them as a crime, since it was forced on them by the exigencies of their position. They saw the frightful evils which their country was suffering from the institution of priesthood as it then existed; and yet they were told that the preservation of that institution in its actual form was essential to the very being of Christianity. They had always been taught that the interests of the clergy were identical with the interests of religion; how, then, could they avoid including both clergy and religion in the same hostility? The alternative was cruel; but it was one from which, in common honesty, they had no escape. We, judging these things by another standard, possess a measure which they could not possibly have. We should not now commit such an error, because we know that there is no connexion between any one particular form of priesthood and the interests of Christianity. We know that the clergy are made for the people, and not the people for the clergy. We know that all questions of church government are matters, not of religion, but of policy, and should be settled, not according to traditional dogmas, but according to large views of general expediency. It is because these propositions are now

admitted by all enlightened men, that in our country the truths of religion are rarely attacked except by superficial thinkers. If, for instance, we were to find that the existence of our bishops, with their privileges and their wealth, is unfavourable to the progress of society, we should not on that account feel enmity against Christianity; because we should remember that episcopacy is its accident and not its essential, and that we could do away with the institution, and yet retain the religion. In the same way, if we should ever find, what was formerly found in France, that the clergy were tyrannical, this would excite in us an opposition, not to Christianity, but merely to the external form which Christianity assumed. So long as our clergy confine themselves to the beneficent duties of their calling, to the alleviation of pain and distress, either bodily or mental, so long will we respect them as the ministers of peace and of charity. But if they should ever again entrench on the rights of the laity—if they should ever again interfere with an authoritative voice in the government of the state—it will then be for the people to inquire, whether the time has not come to effect a revision of the ecclesiastical constitution of the country. This, therefore, is the manner in which we now view these things. What we think of the clergy will depend upon themselves; but will have no connexion with what we think of Christianity. We look on the clergy as a body of men who, notwithstanding their disposition to intolerance, and notwithstanding a certain narrowness incidental to their profession, do undoubtedly form part of a vast and noble institution, by which the manners of men have been softened, their sufferings assuaged, their distresses relieved. As long as this institution performs its functions, we are well content to let it stand. If, however, it should be out of repair, or if it should be found inadequate to the shifting circumstances of an advancing society, we retain both the power and the right of remedying its faults; we may, if need be, remove some of its parts; but we would not, we dare

not, tamper with those great religious truths which are altogether independent of it; truths which comfort the mind of man, raise him above the instincts of the hour, and infuse into him those lofty aspirations which, revealing to him his own immortality, are the measure and the symptom of a future life.

Unfortunately, this was not the way in which these matters were considered in France. The government of that country, by investing the clergy with great immunities, by treating them as if there were something sacred about their persons, and by punishing as heresy the attacks which were made on them, had established in the national mind an indissoluble connexion between their interests and the interests of Christianity. The consequence was, that when the struggle began, the ministers of religion, and religion itself, were both assailed with equal zeal. The ridicule, and even the abuse, heaped on the clergy, will surprise no one who is acquainted with the provocation that had been received. And although, in the indiscriminate onslaught which soon followed, Christianity was, for a time, subjected to a fate which ought to have been reserved for those who called themselves her ministers; this, while it moves us to regret, ought by no means to excite our astonishment. The destruction of Christianity in France was the necessary result of those opinions which bound up the destiny of the national priesthood with the destiny of the national religion. If both were connected by the same origin, both should fall in the same ruin. If that which is the tree of life, were, in reality, so corrupt that it could only bear poisonous fruits, then it availed little to lop off the boughs and cut down the branches; but it were better, by one mighty effort, to root it up from the ground, and secure the health of society by stopping the very source of the contagion.

These are reflections which must make us pause before we censure the deistical writers of the eighteenth century. So perverted, however, are the reasonings to which some minds are accustomed, that those who

judge them most uncharitably are precisely those whose conduct forms their best excuse. Such are the men who, by putting forth the most extravagant claims in favour of the clergy, are seeking to establish the principle, by the operation of which the clergy were destroyed. Their scheme for restoring the old system of ecclesiastical authority, depends on the supposition of its divine origin; a supposition which, if inseparable from Christianity, will at once justify the infidelity which they hotly attack. The increase of the power of the clergy is incompatible with the interests of civilization. If, therefore, any religion adopts as its creed the necessity of such an increase, it becomes the bounden duty of every friend to humanity to do his utmost, either to destroy the creed, or, failing in that, to overturn the religion. If pretensions of this sort are an essential part of Christianity, it behoves us at once to make our choice; since the only option can be, between abjuring our faith, or sacrificing our liberty. Fortunately, we are not driven to so hard a strait; and we know that these claims are as false in theory, as they would be pernicious in practice. It is, indeed, certain, that if they were put into execution, the clergy, though they might enjoy a momentary triumph, would have consummated their own ruin, by preparing the way among us for scenes as disastrous as those which occurred in France.

The truth is, that what is most blamed in the great French writers, was the natural consequence of the development of their age. Never was there a more striking illustration of the social law already noticed, that, if government will allow religious scepticism to run its course, it will issue in great things, and will hasten the march of civilization; but that, if an attempt is made to put it down with a strong hand, it may, no doubt, be repressed for a time, but eventually will rise with such force as to endanger the foundation of society. In England, we adopted the first of these courses; in France, they adopted the second. In England, men were allowed to exercise their own judgment

on the most sacred subjects; and, as soon as the diminution of their credulity had made them set bounds to the power of the clergy, toleration immediately followed, and the national prosperity has never been disturbed. In France the authority of the clergy was increased by a superstitious king; faith usurped the place of reason, not a whisper of doubt was allowed to be heard, and the spirit of inquiry was stifled, until the country fell to the brink of ruin. If Louis XIV. had not interfered with the natural progress, France, like England, would have continued to advance. After his death, it was, indeed, too late to save the clergy, against whom all the intellect of the nation was soon arrayed But the force of the storm might still have been broken, if the government of Louis XV. had conciliated what it was impossible to resist; and, instead of madly attempting to restrain opinions by laws, had altered the laws to suit the opinions. If the rulers of France, instead of exerting themselves to silence the national literature, had yielded to its suggestions, and had receded before the pressure of advancing knowledge, the fatal collision would have been avoided; because the passions which caused the collision would have been appeased. In such case, the church would have fallen somewhat earlier; but the state itself would have been saved. In such case, France would, in all probability, have secured her liberties, without increasing her crimes; and that great country, which, from her position and resources, ought to be the pattern of European civilization, might have escaped the ordeal of those terrible atrocities, through which she was compelled to pass, and from the effects of which she has not yet recovered.

It must, I think, be admitted that, during, at all events, the first half of the reign of Louis XV., it was possible, by timely concessions, still to preserve the political institutions of France. Reforms there must have been; and reforms too of a large and uncompromising character. So far, however, as I am able to understand the real history of that period, I make no doubt that, if these had been granted in a

frank and ungrudging spirit, everything could have been retained necessary for the only two objects at which government ought to aim, namely, the preservation of order, and the prevention of crime. But, by the middle of the reign of Louis XV., or, at all events, immediately afterwards, the state of affairs began to alter; and, in the course of a few years, the spirit of France became so democratic, that it was impossible even to delay a revolution, which, in the preceding generation, might have been altogether averted. This remarkable change is connected with that other change already noticed, by virtue of which, the French intellect began, about the same period, to direct its hostility against the state, rather than, as heretofore, against the church. As soon as this, which may be called the second epoch of the eighteenth century, had been fairly entered, the movement became irresistible. Event after event followed each other in rapid succession; each one linked to its antecedent, and the whole forming a tendency impossible to withstand. It was in vain that the government, yielding some points of real importance, adopted measures by which the church was controlled, the power of the clergy diminished, and even the order of the Jesuits suppressed. It was in vain that the crown now called to its councils, for the first time, men imbued with the spirit of reform; men, like Turgot and Necker, whose wise and liberal proposals would, in calmer days, have stilled the agitation of the popular mind. It was in vain that promises were made to equalize the taxes, to redress some of the most crying grievances, to repeal some of the most obnoxious laws. It was even in vain that the states-general were summoned; and that thus, after the lapse of a hundred and seventy years, the people were again admitted to take part in the management of their own affairs. All these things were in vain; because the time for treaty had gone by, and the time for battle had come. The most liberal concessions that could possibly have been devised would have failed to avert that deadly struggle, which the course of preceding events made inevitable.

For the measure of that age was now full. The upper classes, intoxicated by the long possession of power, had provoked the crisis; and it was needful that they should abide the issue. There was no time for mercy; there was no pause, no compassion, no sympathy. The only question that remained was, to see whether they who had raised the storm could ride the whirlwind; or, whether it was not rather likely that they should be the first victims of that frightful hurricane, in which, for a moment, laws, religion, morals, all perished, the lowest vestiges of humanity were effaced, and the civilization of France not only submerged, but, as it then appeared, irretrievably ruined.

To ascertain the successive changes of this, the second epoch of the eighteenth century, is an undertaking full of difficulty; not only on account of the rapidity with which the events occurred, but also on account of their extreme complication, and of the way in which they acted and reacted upon each other. The materials, however, for such an inquiry are very numerous; and as they consist of evidence supplied by all classes and all interests, it has appeared to me possible to reconstruct the history of that time, according to the only manner in which history deserves to be studied; that is to say, according to the order of its social and intellectual development. In the concluding chapter of the present volume, I shall, therefore, attempt to trace the antecedents of the French Revolution during that remarkable period, in which the hostility of men, slackening in regard to the abuses of the church, was, for the first time, turned against the abuses of the state. But, before entering into this, which may be distinguished as the political epoch of the eighteenth century, it will be necessary, according to the plan which I have sketched, to examine the changes that occurred in the method of writing history, and to indicate the way in which those changes were affected by the tendencies of the earlier, or, as it may be termed, the ecclesiastical epoch. In this manner, we shall the more easily understand the

activity of that prodigious movement which led to the French Revolution; because we shall see that it not only affected the opinions of men in regard to what was passing under their eyes, but that it also biased their speculative views in regard to the events of preceding ages; and thus gave rise to that new school of historical literature, the formation of which is by no means the least of the many benefits which we owe to the great thinkers of the eighteenth century.

CHAPTER VI

State of Historical Literature in France from the End of the Sixteenth to the End of the Eighteenth Century.

It may be easily supposed, that those vast movements in the intellect of France, which I have just traced, could not fail to produce a great change in the method of writing history. That bold spirit with which men were beginning to estimate the transactions of their own time, was sure to influence their opinions respecting those of a former age. In this, as in every branch of knowledge, the first innovation consisted in recognizing the necessity of doubting what had hitherto been believed; and this feeling, when once established, went on increasing, destroying at each step some of those monstrous absurdities by which, as we have seen, even the best histories were disfigured. The germs of the reform may be discerned in the fourteenth century, though the reform itself did not begin until late in the sixteenth century. During the seventeenth century, it advanced somewhat slowly; but in the eighteenth century it received a sudden accession of strength, and, in France in particular, it was hastened by that fearless and inquisitive spirit which characterized the age, and which, purging history of innumerable follies, raised its standard, and conferred on it a dignity hitherto unknown. The rise of historical scepticism, and the extent to which it spread, do indeed form such curious features in the annals of the European intellect, as to make it surprising that no one should have attempted to examine a movement to which a great

department of modern literature owes its most valuable peculiarities. In the present chapter, I hope to supply this deficiency so far as France is concerned; and I shall endeavour to mark the different steps by which the progress was effected, in order that, by knowing the circumstances most favourable to the study of history, we may with the greater ease inquire into the probability of its future improvement.

There is, in reference to this subject, a preliminary consideration well worthy of notice. This is, that men seem always to have begun to doubt in matters of religion, before they ventured to do so in matters of history. It might have been expected that the reproaches, and, in a superstitious age, the dangers, to which heresy is exposed, would have intimidated inquirers, and would have induced them to prefer the safer path of directing their scepticism upon questions of literary speculation. Such, however, is by no means the course which the human mind has adopted. In an early stage of society, when the clergy had universal influence, a belief in the unpardonable criminality of religious error is so deeply rooted, that it engrosses the attention of all; it forces everyone who thinks, to concentrate upon theology his reflections and his doubts, and it leaves no leisure for topics which are conceived to be of inferior importance.[256] Hence, during many centuries, the subtlest intellects of Europe exhausted their strength on the rites and dogmas of Christianity; and while upon these matters they often showed the greatest ability, they, upon other subjects, and especially upon history, displayed that infantine credulity, of which I have already given several examples.

But when, in the progress of society, its theological element begins to decay, the ardour with which re-

[256] The service which the metaphysicians rendered to the church by their development of the doctrine of transubstantiation (*Blanco White's Evidence against Catholicism*, pp. 256-258) is a striking instance of this subordination of the intellect to ecclesiastical dogmas.

ligious disputes were once conducted becomes sensibly weakened. The most advanced intellects are the first to feel the growing indifference, and, therefore, they are also the first to scrutinize real events with that inquisitive eye which their predecessors had reserved for religious speculations. This is a great turning-point in the history of every civilized nation. From this moment theological heresies become less frequent,[257] and literary heresies become more common. From this moment, the spirit of inquiry and of doubt fastens itself upon every department of knowledge, and begins that great career of conquest, in which by every succeeding discovery the power and dignity of man are increased, while at the same time most of his opinions are disturbed, and many of them are destroyed: until, in the march of this vast but noiseless revolution, the stream of tradition is, as it were, interrupted, the influence of ancient authority is subverted, and the human mind, waxing in strength, learns to rely upon its own resources, and to throw off incumbrances by which the freedom of its movements had long been impaired.

The application of these remarks to the history of France, will enable us to explain some interesting phenomena in the literature of that country. During the whole of the Middle Ages, and I may say till the end of the sixteenth century, France, though fertile in annalists and chroniclers, had not produced a single historian, because she had not produced a single man who presumed to doubt what was generally believed.

[257] M. Tocqueville says, what I am inclined to think is true, that an increasing spirit of equality lessens the disposition to form new religious creeds. *Démocratie en Amérique*, vol. iv. pp. 16, 17. At all events, it is certain that increasing knowledge has this effect; for those great men whose turn of mind would formerly have made them heretics, are now content to confine their innovations to other fields of thought. If St Augustine had lived in the seventeenth century, he would have reformed or created the physical sciences. If Sir Isaac Newton had lived in the fourth century, he would have organized a new sect, and have troubled the church with his originality.

Indeed, until the publication of Du Haillan's history of the kings of France, no one had even attempted a critical digest of the materials which were known to be extant. This work appeared in 1576; and the author, at the conclusion of his labours, could not disguise the pride which he felt at having accomplished so great an undertaking. In his dedication to the king he says, "I am, sire, the first of all the French who have written the history of France, and, in a polite language, shown the grandeur and dignity of our kings; for before there was nothing but the old rubbish of chronicles which spoke of them." He adds in the preface: "Only I will say, without presumption and boasting, that I have done a thing which had not been done before, or seen by any of our nation, and have given to the history of France a dress it never appeared in before." Nor were these the idle boasts of an obscure man. His work went through numerous editions; was translated into Latin, and was reprinted in foreign countries. He himself was looked upon as one of the glories of the French nation, and was rewarded by the favour of the king, who conferred on him the office of secretary of finance. From his work, we may, therefore, gain some notion of what was then the received standard of historical literature; and with this view, it is natural to inquire what the materials were which he chiefly employed. About sixty years earlier, an Italian named Paulus Emilius had published a gossiping compilation on "the Actions of the French." This book, which is full of extravagant fables, was taken by Du Haillan as the basis of his famous history of the kings of France; and from it he unhesitatingly copies those idle stories which Emilius loved to relate. This will give us some idea of the credulity of a writer, who was reckoned by his contemporaries to be, beyond all comparison, the greatest historian France had produced. But this is not all. Du Haillan, not content with borrowing from his predecessor everything that was most incredible, gratifies his passion for the marvellous by some circumstances of his own invention.

He begins his history with a long account of a council which, he says, was held by the celebrated Pharamond, in order to determine whether the French should be governed by a monarchy or by an aristocracy. It is, indeed, doubtful if any such person as Pharamond ever existed; and it is certain that if he did exist, all the materials had long perished from which an opinion could be formed respecting him.[258] But Du Haillan, regardless of these little difficulties, gives us the fullest information touching the great chieftain; and, as if determined to tax to the utmost the credulity of his readers, mentions, as members of the council of Pharamond, two persons, Charamond and Quadrek, whose very names are invented by the historian.

Such was the state of historical literature in France early in the reign of Henry III. A great change was, however, at hand. The remarkable intellectual progress made by the French towards the close of the sixteenth century, was, as I have shown, preceded by that scepticism which appears to be its necessary precursor. The spirit of doubt, which had begun with religion, was communicated to literature. The impulse was immediately felt in every department of knowledge, and now it was that history first emerged from a debasement in which it had for centuries been sunk. On this subject, a mere statement of dates may be of service to those persons who, from a dislike to general reasoning, would otherwise deny the connexion which I wish to establish. In 1588 was published the first sceptical book ever written in the French language. In 1598, the French government, for the first time, ventured upon a great public act of religious toleration.

[258] Philippe de Comines, though superior to Sismondi and Montlosier in point of ability, lived in the middle ages, and, therefore, had no idea of doubting, but simply says, "Pharamond fut esleu roy, l'an 420, et regna dix ans." *Mém. de Comines* livre viii. chap. xxvii. vol. iii. p. 232. But De Thou, coming a hundred years after Comines, evidently suspected that it was not all quite right, and, therefore, puts it on the authority of others. "Pharamond, qui *selon nos historiens* a porté le premier la couronne des François." *De Thou, Hist. Univ.* vol. x. p. 530.

In 1604, De Thou published that celebrated work, which is allowed by all critics to be the first great history composed by a Frenchman.[259] And at the very moment when these things were passing, another eminent Frenchman, the illustrious Sully, was collecting the materials for his historical work, which, though hardly equal to that of De Thou, comes immediately after it in ability, in importance and in reputation. Nor can we fail to remark, that both these great historians, who left all their predecessors immeasurably behind them, were the confidential ministers and intimate friends of Henry IV., the first king of France whose memory is stained by the imputation of heresy, and the first who dared to change his religion, not in consequence of any theological arguments, but on the broad and notorious ground of political expediency.[260]

But it was not merely over such eminent historians as these, that the sceptical spirit displayed its influence. The movement was now becoming sufficiently active to leave its marks in the writings of far inferior men. There were two particulars in which the credulity of the earlier historians was very striking. These consisted in the uncritical manner in which, by blindly copying their predecessors, they confused the dates of different events; and in the readiness with which they believed the most improbable statements, upon imperfect evidence, and often upon no evidence at all. It is surely a singular proof of that intellectual progress which I am endeavouring to trace, that, within a very few years, both these sources of error were removed.

[259] The first volume appeared in 1604.

[260] According to D'Aubigné, the king, on his conversion, said, "Je ferai voir à tout le monde que je n'ai esté persuadé par autre théologie que la nécessité de l'estat." *Smedley's Reformed Religion in France*, vol. ii. p. 362. That Henry felt this is certain; and that he expressed it to his friends is probable; but he had a difficult game to play with the Catholic Church; and in one of his edicts we find "une grande joye de son retour à l'église, dont il attribuoit la cause à la grace du Tout-Puissant, et aux prières de ses fidèles sujets." *De Thou, Hist. Univ.* vol. xii. pp. 105, 106.

In 1597, Serres was appointed historiographer of France; and, in the same year, he published his history of that country. In this work, he insists upon the necessity of carefully recording the date of each event; and the example, which he first set, has, since his time, been generally followed. The importance of this change will be willingly acknowledged by those who are aware of the confusion into which history has been thrown, by the earlier writers having neglected, what now seems, so obvious a precaution. Scarcely had this innovation been established, when it was followed, in the same country, by another of still greater moment. This was the appearance, in 1621, of a history of France, by Scipio Dupleix; in which, for the first time, the evidence for historical facts was published with the facts themselves. It is needless to insist upon the utility of a step which, more than any other, has taught historians to be industrious in collecting their authorities, and careful in scrutinizing them.[261] To this may be added, that Dupleix was also the first Frenchman who ventured to publish a system of philosophy in his own language. It is true, that the system itself is intrinsically of little value;[262] but, at the time it appeared, it was an unprecedented, and, on that account, a profane attempt, to unfold the mysteries of philosophy in the vulgar speech; and, in this point of view, supplies evidence of the increasing diffusion of a spirit bolder and more inquisitive than any formerly known. It is not, therefore, surprising, that, almost at the same moment, there should be made, in the same country, the first systematic attempt at historical scepticism. The system of philosophy by Dupleix appeared in 1602; and in 1599, La Popelinière published at Paris what he calls the *History of Histories*, in which he criticizes historians

[261] The ancients, as is well known, rarely took this trouble. *Mure's Hist. of Greek Literature*, vol. iv. pp. 197, 306, 307.

[262] So it seemed to me, when I turned over its leaves a few years ago. However, Patin says, "sa philosophie françoise n'est pas mauvaise." *Lettres de Patin*, vol. iii. p. 357.

themselves, and examines their works with that sceptical spirit, to which his own age was deeply indebted. This able man was also the author of a *Sketch of the New History of the French*; containing a formal refutation of that fable, so dear to the early historians, according to which, the monarchy of France was founded by Francus, who arrived in Gaul after the conclusion of the siege of Troy.

It would be useless to collect all the instances in which this advancing spirit of scepticism now began to purge history of its falsehoods. I will only mention two or three more of those which have occurred in my reading. In 1614, De Rubis published at Lyons a work on the European monarchies; in which he not only attacks the long-established belief respecting the descent from Francus, but boldly asserts, that the Franks owe their name to their ancient liberties. In 1620, Gomberville, in a dissertation on history, refutes many of those idle stories respecting the antiquity of the French, which had been universally received until his time.[263] And, in 1630, Berthault published at Paris the "French Florus," in which he completely upsets the old method; since he lays it down as a fundamental principle, that the origin of the French must only be sought for in those countries where they were found by the Romans.[264]

All these, and similar productions, were, however, entirely eclipsed by Mezeray's History of France; the first volume of which was published in 1643, and the last in 1651.[265] It is, perhaps, hardly fair to his

[263] There is an account of Gomberville in *Les Historiettes de Tallemant des Réaux*, vol. viii. pp. 15-19; a singularly curious book, which is, for the seventeenth century, what Brantome is for the sixteenth. I ought to have mentioned earlier, the inimitable ridicule with which Rabelais treats the habit historians had of tracing the genealogies of their heroes back to Noah.

[264] This work of Berthault's was, for many years, a text-book in the French colleges. *Biog. Univ.* vol. iv. p. 347.

[265] The first volume in 1643; the second in 1646; and the last in 1651.

predecessors, to call him the first general historian of France;[266] but there can be no doubt that his work is greatly superior to any that had yet been seen. The style of Mezeray is admirably clear and vigorous, rising, at times, to considerable eloquence. Besides this, he has two other merits much more important. These are, an indisposition to believe strange things, merely because they have hitherto been believed; and an inclination to take the side of the people, rather than that of their rulers. Of these principles, the first was too common among the ablest Frenchmen of that time to excite much attention.[267] But the other principle enabled Mezeray to advance an important step before all his contemporaries. He was the first Frenchman who, in a great historical work, threw off that superstitious reverence for royalty which had long troubled the minds of his countrymen, and which, indeed, continued to haunt them for another century. As a necessary consequence, he was also the first who saw that a history, to be of real value, must be a history, not only of kings, but of nations. A steady perception of this principle led him to incorporate into his book matters which, before his time, no one cared to study. He communicates all the information he could collect respecting the taxes which the people had paid; the sufferings they had undergone from the griping hands of their governors; their manners, their comforts, even the state of the towns which they inhabited; in a word, what affected the interests of the French people, as well as what affected the interests of the French monarchy.[268] These were the subjects

[266] "The French have now their first general historian, Mezeray." *Hallam's Literature of Europe*, vol. iii. p. 228.

[267] Though it did not prevent him from believing that sudden tempests, and unusual appearances in the heavens, were aberrations, due to supernatural interference, and, as such, were the prognosticators of political change.

[268] What he did on these subjects is most remarkable, considering that some of the best materials were unknown, and in manuscript, and that even De Thou gives scarcely any information respecting them; so that Mezeray had no model.

which Mezeray preferred to insignificant details respecting the pomp of courts and the lives of kings. These were the large and comprehensive matters on which he loved to dwell, and on which he expatiated; not, indeed, with so much fulness as we could desire, but still with a spirit and an accuracy, which entitles him to the honour of being the greatest historian France produced before the eighteenth century.

This was, in many respects, the most important change which had yet been effected in the manner of writing history. If the plan begun by Mezeray had been completed by his successors, we should possess materials, the absence of which no modern researches can possibly compensate. Some things, indeed, we should, in that case, have lost. We should know less than we now know of courts and of camps. We should have heard less of the peerless beauty of French queens, and of the dignified presence of French kings. We might even have missed some of the links of that evidence by which the genealogies of princes and nobles are ascertained, and the study of which delights the curiosity of antiquaries and heralds. But, on the other hand, we should have been able to examine the state of the French people during the latter half of the seventeenth century; while, as things now stand, our knowledge of them, in that most important period, is inferior in accuracy and in extent to the knowledge we possess of some of the most barbarous tribes of the earth.[269] If the example of Mezeray had been followed, with such additional resources as the progress of affairs

[269] Those who have studied the French memoirs of the seventeenth century, know how little can be found in them respecting the condition of the people; while the fullest private correspondence, such as the letters of Sevigné and De Maintenon, are equally unsatisfactory. The greater part of the evidence now extant has been collected by M. Monteil, in his valuable work, *Histoire des divers Etats*; but whoever will put all this together, must admit, that we are better informed as to the condition of many savage tribes, than we are concerning the lower classes of France during the reign of Louis XIV.

would have supplied, we should not only have the means of minutely tracing the growth of a great and civilized nation, but we should have materials that would suggest or verify those original principles, the discovery of which constitutes the real use of history.

But this was not to be. Unhappily for the interests of knowledge, the march of French civilization was, at this period, suddenly checked. Soon after the middle of the seventeenth century, that lamentable change took place in France, which gave a new turn to the destinies of the nation. The reaction which the spirit of inquiry underwent, and the social and intellectual circumstances which, by bringing the Fronde to a premature close, prepared the way for Louis XIV., have been described in a former part of this volume, where I have attempted to indicate the general effects of the disastrous movement. It now remains for me to point out how this retrogressive tendency opposed obstacles to the improvement of historical literature, and prevented authors, not only from relating with honesty what was passing around them, but also from understanding events which had occurred before their time.

The most superficial students of French literature must be struck by the dearth of historians during that long period in which Louis XIV. held the reins of government. To this the personal peculiarities of the king greatly contributed. His education had been shamefully neglected; and as he never had the energy to repair its deficiencies, he all his life remained ignorant of many things with which even princes are usually familiar. Of the course of past events he knew literally nothing, and he took no interest in any history except the history of his own exploits. Among a free people, this indifference on the part of the sovereign could never have produced injurious results; indeed, as we have already seen, the absence of royal patronage is, in a highly civilized country, the most favourable condition of literature. But at the accession of Louis XIV., the liberties of the French were still too young, and the habits of independent thought too recent, to enable

them to bear up against that combination of the crown and the church, which was directed against them. The French, becoming every day more servile, at length sunk so low, that, by the end of the seventeenth century, they seemed to have lost even the wish of resistance. The king, meeting no opposition, endeavoured to exercise over the intellect of the country an authority equal to that with which he conducted its government. In all the great questions of religion and of politics, the spirit of inquiry was stifled, and no man was allowed to express an opinion unfavourable to the existing state of things. As the king was willing to endow literature, he naturally thought that he had a right to its services. Authors, who were fed by his hand, were not to raise their voices against his policy. They received his wages, and they were bound to do the bidding of him who paid them. When Louis assumed the government, Mezeray was still living; though I need hardly say that his great work was published before this system of protection and patronage came into play. The treatment to which he, the great historian of France, was now subjected, was a specimen of the new arrangement. He received from the crown a pension of four thousand francs; but when he, in 1668, published an abridgment of his History,[270] it was intimated to him, that some remarks upon the tendency of taxation were likely to cause offence in high quarters. As, however, it was soon found that Mezeray was too honest and too fearless to retract what he had written, it was determined to have recourse to intimidation, and half of his pension was taken from him. But as this did not pro-

[270] His *Abrégé Chronologique* was published in 1668, in three volumes quarto. *Biog. Univ.* vol. xxviii. p. 510. Le Long (*Bibliothèque Historique*, vol. iii. p. lxxxv.) says, that it was only allowed to be published in consequence of a "privilège" which Mezeray had formerly obtained. But there seems to have been some difficulty, of which these writers are not aware; for Patin, in a letter dated Paris, 23 December 1664, speaks of it as being then in the press. *Lettres de Patin*, vol. iii. p. 503. It long remained an established school-book.

duce a proper effect, another order was issued, which deprived him of the remaining half; and thus early in this bad reign, there was set an example of punishing a man for writing with honesty upon a subject in which, of all others, honesty is the first essential.[271]

Such conduct as this, showed what historians were to expect from the government of Louis XIV. Several years later, the king took another opportunity of displaying the same spirit. Fénélon had been appointed preceptor to the grandson of Louis, whose early vices his firmness and judgment did much to repress. But a single circumstance was thought sufficient to outweigh the immense service which Fénélon thus rendered to the royal family, and, if his pupil had come to the throne, would have rendered prospectively to the whole of France. His celebrated romance, *Telemachus*, was published in 1699, as it appears, without his consent. The king suspected that, under the guise of a fiction, Fénélon intended to reflect on the conduct of government. It was in vain that the author denied so dangerous an imputation. The indignation of the king was not to be appeased. He banished Fénélon from the court, and would never again admit to his presence a man, whom he suspected of even insinuating a criticism upon the measures adopted by the administration of the country.

If the king could, on mere suspicion, thus treat a great writer, who had the rank of an archbishop and the reputation of a saint, it was not likely that he would deal more tenderly with inferior men. In 1681, the Abbé Primi, an Italian, then residing at Paris, was induced to write a history of Louis XIV. The king, delighted with the idea of perpetuating his own fame, conferred several rewards upon the author; and arrangements

[271] In 1685 was published at Paris what was called an improved edition of Mezeray's History; that is, an edition from which the honest remarks were expunged. Hampden, who knew Mezeray, has recorded an interesting interview he had with him in Paris, when the great historian lamented the loss of the liberties of France.

were made that the work should be composed in Italian, and immediately translated into French. But when the history appeared, there were found in it some circumstances which it was thought ought not to have been disclosed. On this account, Louis caused the book to be suppressed, the papers of the author to be seized, and the author himself to be thrown into the Bastille.[272]

Those, indeed, were dangerous times for independent men; times when no writer on politics or religion was safe, unless he followed the fashion of the day, and defended the opinions of the court and the church. The king, who had an insatiable thirst for what he called glory, laboured to degrade contemporary historians into mere chroniclers of his own achievements. He ordered Racine and Boileau to write an account of his reign; he settled a pension upon them, and he promised to supply them with the necessary materials. But even Racine and Boileau, poets though they were, knew that they would fail in satisfying his morbid vanity; they, therefore, received the pension, but omitted to compose the work for which the pension was conferred. So notorious was the unwillingness of able men to meddle with history, that it was thought advisable to beat up literary recruits from foreign countries. The case of the Abbé Primi has just been mentioned; he was an Italian, and only one year later a similar offer was made to an Englishman. In 1683, Burnet visited France, and was given to understand that he might receive a pension, and that he might even enjoy the honour of conversing with Louis himself, provided he would write a history of the royal affairs; such history, it was carefully added, being on the "side" of the French king.[273]

[272] These circumstances are related in a letter from Lord Preston, dated Paris, 22nd July 1682, and printed in *Dalrymple's Memoirs*, pp. 141, 142, appendix to vol. i. The account given by M. Peignot (*Livres condamnés*, vol. i. pp. 52, 53) is incomplete, he being evidently ignorant of the existence of Lord Preston's letter.

[273] Burnet relates this with delightful simplicity: "Others

Under such circumstances as these, it is no wonder that history, so far as its great essentials are concerned, should have rapidly declined during the power of Louis XIV. It became, as some think, more elegant; but it certainly became more feeble. The language in which it was composed was worked with great care, the periods neatly arranged, the epithets soft and harmonious. For that was a polite and obsequious age, full of reverence, of duty, and of admiration. In history, as it was then written, every king was a hero, and every bishop was a saint. All unpleasant truths were suppressed; nothing harsh or unkind was to be told. These docile and submissive sentiments being expressed in an easy and flowing style, gave to history that air of refinement, that gentle, unobtrusive gait, which made it popular with the classes that it flattered. But even so, while its form was polished, its life was extinct. All its independence was gone, all its honesty, all its boldness. The noblest and the most difficult department of knowledge, the study of the movements of the human race, was abandoned to every timid and creeping intellect that cared to cultivate it. There were Boulainvilliers, and Daniel, and Maimbourg, and Varillas, and Vertot, and numerous others, who in the reign of Louis XIV. were believed to be historians; but whose histories have scarcely any merit, except that of enabling us to appreciate the period in which such productions were admired, and the system of which they were the representatives.

To give a complete view of the decline of historical literature in France, from the time of Mezeray until early in the eighteenth century, would require a summary of every history which was written; for all of

more probably thought that the king, hearing I was a writer of history, had a mind to engage me to write on his side. I was told that a pension would be offered me. But I made no steps towards it; for though I was offered an audience of the king, I excused it, since I could not have the honour to be presented to that king by the minister of England." *Burnet's History of my Own Times*, vol. ii. p. 385.

them were pervaded by the same spirit. But, as this would occupy much too large a space, it will probably be thought sufficient if I confine myself to such illustrations as will bring the tendency of the age most clearly before the reader; and for this purpose, I will notice the works of two historians I have not yet mentioned; one of whom was celebrated as an antiquary, the other as a theologian. Both possessed considerable learning, and one was a man of undoubted genius; their works are, therefore, worth attention, as symptoms of the state of the French intellect late in the seventeenth century. The name of the antiquary was Audigier; the name of the theologian was Bossuet: and from them we may learn something respecting the way in which, during the reign of Louis XIV., it was usual to contemplate the transactions of past ages.

The celebrated work of Audigier, on the Origin of the French, was published at Paris in 1676.[274] It would be unjust to deny that the author was a man of great and careful reading. But his credulity, his prejudices, his reverence for antiquity, and his dutiful admiration for everything established by the church and the court, warped his judgment to an extent which, in our time, seems incredible; and, as there are probably few persons in England who have read his once famous book, I will give an outline of its leading views.

In this great history we are told, that 3464 years after the creation of the world, and 590 years before the birth of Christ, was the exact period at which Sigovese, nephew to the king of the Celts, was first sent into Germany. Those who accompanied him were necessarily travellers; and as, in the German language, *wandeln* means *to go*, we have here the origin of the Vandals.[275] But the antiquity of the Vandals is far

[274] During many years it enjoyed great reputation; and there is no history written in that period respecting which Le Long gives so many details.

[275] Other antiquaries have adopted the same preposterous etymology.

surpassed by that of the French. Jupiter, Pluto and Neptune, who are sometimes supposed to be gods, were in reality kings of Gaul. And, if we look back a little further, it becomes certain that Gallus, the founder of Gaul, was no other than Noah himself; for in those days the same man frequently had two names. As to the subsequent history of the French, it was fully equal to the dignity of their origin. Alexander the Great, even in all the pride of his victories, never dared to attack the Scythians, who were a colony sent from France. It is from these great occupiers of France that there have proceeded all the gods of Europe, all the fine arts, and all the sciences. The English, themselves are merely a colony of the French, as must be evident to whoever considers the similarity of the words Angles and Anjou, and to this fortunate descent the natives of the British Islands are indebted for such bravery and politeness as they still possess. Several other points are cleared up by this great critic with equal facility. The Salian Franks were so called from the rapidity of their flight, the Bretons were evidently Saxons, and even the Scotch, about whose independence so much has been said, were vassals to the kings of France. Indeed, it is impossible to exaggerate the dignity of the crown of France; it is difficult even to conceive its splendour. Some have supposed that the emperors are superior to the kings of France, but this is the mistake of ignorant men; for an emperor means a mere military ruler, while the title of king includes all the functions of supreme power. To put the question, therefore, on its real footing, the great king Louis XIV. is an emperor, as have been all his predecessors, the illustrious rulers of France, for fifteen centuries. And it is an undoubted fact, that Antichrist, about whom so much anxiety is felt, will never be allowed to appear in the world until the French empire has been destroyed. This, says Audigier, it would be idle to deny; for it is asserted by many of the saints, and it is distinctly foreshadowed by St Paul, in his second epistle to the Thessalonians.

Strange as all this appears, there was nothing in it to revolt the enlightened age of Louis XIV. Indeed, the French, dazzled by the brilliancy of their prince, must have felt great interest in learning how superior he was to all other potentates, and how he had not only been preceded by a long line of emperors, but was in fact an emperor himself. They must have been struck with awe at the information communicated by Audigier respecting the arrival of Antichrist, and the connexion between that important event and the fate of the French monarchy. They must have listened with pious wonder to the illustration of these matters from the writings of the fathers, and from the epistle to the Thessalonians. All this they would easily receive; because to worship the king, and venerate the church, were the two cardinal maxims of that age. To obey, and to believe, were the fundamental ideas of a period, in which the fine arts did for a time flourish—in which the perception of beauty, though too fastidious, was undoubtedly keen—in which taste and the imagination, in its lower departments, were zealously cultivated—but in which, on the other hand, originality and independence of thought were extinguished, the greatest and the largest topics were forbidden to be discussed, the sciences were almost deserted, reforms and innovations were hated, new opinions were despised, and their authors punished, until at length, the exuberance of genius being tamed into sterility, the national intellect was reduced to that dull and monotonous level which characterizes the last twenty years of the reign of Louis XIV.

In no instance can we find a better example of this reactionary movement, than in the case of Bossuet, bishop of Meaux. The success, and indeed the mere existence of his work on Universal History, becomes, from this point of view, highly instructive. Considered by itself, the book is a painful exhibition of a great genius cramped by a superstitious age. But considered in reference to the time in which it appeared, it is invaluable as a symptom of the French intellect; since

it proves, that towards the end of the seventeenth century, one of the most eminent men, in one of the first countries of Europe, could willingly submit to a prostration of judgment, and could display a blind credulity, of which, in our day, even the feeblest minds would be ashamed; and that this, so far from causing scandal, or bringing a rebuke on the head of the author, was received with universal and unqualified applause. Bossuet was a great orator, a consummate dialectician, and an accomplished master of those vague sublimities by which most men are easily affected. All these qualities he, a few years later, employed in the production of what is probably the most formidable work ever directed against Protestantism.[276] But when he, leaving these matters, entered the vast field of history, he could think of no better way of treating his new subject, than by following the arbitrary rules peculiar to his own profession. His work is an audacious attempt to degrade history to a mere handmaid of theology. As if, on such matters, doubt were synonymous with crime, he, without the slightest hesitation, takes everything for granted which the church had been accustomed to believe. This enables him to speak with perfect confidence respecting events which are lost in the remotest antiquity. He knows the exact number of years which have elapsed since the moment when Cain murdered his brother; when the deluge overwhelmed the world; and when Abraham was summoned to his mission. The dates of these, and similar occurrences, he fixes with a precision, which might almost make us believe that they had taken place in

[276] This is the opinion of Mr Hallam respecting Bossuet's History of the Variations of Protestant Churches. *Const. Hist.* vol. i. p. 486. Attempts have been made by Protestant theologians to retort against the Catholics the arguments of Bossuet, on the ground that religious variations are a necessary consequence of the honest pursuit of religious truth. With this I fully agree; but it would be easy to show that the argument is fatal to all ecclesiastical systems with strictly defined creeds, and, therefore, strikes as heavily against the Protestant churches as against the Catholic.

his own time, if not under his own eyes.[277] It is true, that the Hebrew books on which he willingly relied, supply no evidence of the slightest value concerning the chronology even of their own people; while the information they contain respecting other countries, is notoriously meagre and unsatisfactory.[278] But so narrow were the views of Bossuet upon history, that with all this he, in his own opinion, had no concern. The text of the Vulgate declared, that these things had happened at a particular time; and a number of holy men, calling themselves the council of the church, had, in the middle of the sixteenth century, pronounced the Vulgate to be authentic, and had taken upon themselves to place it above all other versions.[279] This theological opinion was accepted by Bossuet as an historical law; and thus the decision of a handful of cardinals and bishops, in a superstitious and uncritical age, is the sole authority for that early chronology, the precision of which is, to an uninformed reader, a matter of great admiration.[280]

In the same way, because Bossuet had been taught that the Jews are the chosen people of God, he, under

[277] He says, that if the ordinarily received dates of the Pentateuch and the Prophets are not true, then the miracles must fall, and the writings themselves are not inspired. *Hist. Univ.* p. 360. It would be hard to find, even in the works of Bossuet, a more rash assertion than this.

[278] Indeed the Jews have no consecutive chronology before Solomon.

[279] Doing this, as they did everything else, on account, not of reason, but of dogma.

[280] Theologians have always been remarkable for the exactness of their knowledge on subjects respecting which nothing is known; but none of them have surpassed the learned Dr Stukeley. In 1730, this eminent divine writes: "But according to the calculations I have made of this matter, I find God Almighty ordered Noah to get the creatures into the ark on Sunday the 12th of October, the very day of the autumnal equinox that year; and on this present day, on the Sunday se'nnight following (the 19th of October), that terrible catastrophe began, the moon being past her third quarter." *Nichols's Illustrations of the Eighteenth Century*, vol. ii. p. 792.

the title of Universal History, almost confines his attention to them, and treats this obstinate and ignorant race as if they formed the pivot upon which the affairs of the universe had been made to turn. His idea of an universal history excludes those nations who were the first to reach civilization, and to some of whom the Hebrews owed the scanty knowledge which they subsequently acquired. He says little of the Persians, and less of the Egyptians; nor does he even mention that far greater people between the Indus and the Ganges, whose philosophy formed one of the elements of the school of Alexandria, whose subtle speculations anticipated all the efforts of European metaphysics, and whose sublime inquiries, conducted in their own exquisite language, date from a period when the Jews, stained with every variety of crime, were a plundering and vagabond tribe, wandering on the face of the earth, raising their hand against every man, and every man raising his hand against them.

When he enters the more modern period, he allows himself to be governed by the same theological prejudices. So contracted is his view, that he considers the whole history of the church as the history of providential interference; and he takes no notice of the manner in which, contrary to the original scheme, it has been affected by foreign events.[281] Thus, for example, the most important fact relating to the early changes in Christianity, is the extent to which its doctrines have been influenced by the African form of the Platonic philosophy.[282] But this, Bossuet never mentions; nor does he even

[281] The original scheme of Christianity, as stated by its Great Author (*Matthew* x. 6 and xv. 24), was merely to convert the Jews; and if the doctrines of Christ had never extended beyond that ignorant people, they could not have received those modifications which philosophy imposed upon them.

[282] Neander (*Hist. of the Church*, vol. ii. p. 42) even thinks that Cerinthus, whose views are remarkable as being the point where Gnosticism and Judaism touch each other, borrowed his system from Alexandria. But this, though not unlikely, seems only to rest on the authority of Theodoret.

hint that any such thing had occurred. It suited his views to look upon the church as a perpetual miracle, and he, therefore, omits the most important event in its early history. To descend a little later: every one acquainted with the progress of civilization will allow, that no small share of it is due to those gleams of light, which, in the midst of surrounding darkness, shot from the great centres of Cordova and Bagdad. These, however, were the work of Mohammedanism; and as Bossuet had been taught that Mohammedanism is a pestilential heresy, he could not bring himself to believe that Christian nations had derived anything from so corrupt a source. The consequence is, that he says nothing of that great religion, the noise of which has filled the world;[283] and having occasion to mention its founder, he treats him with scorn, as an impudent impostor, whose pretensions it is hardly fitting to notice. The great apostle, who diffused among millions of idolators the sublime verity of one God, is spoken of by Bossuet with supreme contempt; because Bossuet, with the true spirit of his profession, could see nothing to admire in those whose opinions differed from his own.[41] But when he has occasion to mention

[283] About the time that Bossuet wrote, a very learned writer calculated that the area of the countries which professed Mohammedanism, exceeded, by one-fifth, those where Christianity was believed. The estimate of Southey (*Vindiciæ Ecclesiæ Anglicanæ*, London, 1826, p. 48), is very vague; but it is much easier to judge of the extent of Mohammedan countries than of the extent of their population. On this latter point we have the most conflicting statements. In the nineteenth century, there are, according to Sharon Turner (*Hist. of England*, vol. iii. p. 485, edit. 1839), eighty million Mohammedans; according to Dr Elliotson (*Human Physiology*, p. 1055, edit. 1840), more than a hundred and twenty-two million; while, according to Mr Wilkin (note in *Sir Thomas Browne's Works*, vol. ii. p. 37, edit. 1835), there are a hundred and eighty-eight million.

[284] The greatest Mohammedan writers have always expressed ideas regarding the Deity more lofty than those possessed by the majority of Christians. The Koran contains noble passages on the oneness of God; and for the views of their ordinary theologians, I may refer to an interesting Mohammedan sermon, in *Transactions of the Bombay Society*, vol. i. pp. 146-158.

some obscure member of that class to which he himself belonged, then it is that he scatters his praises with boundless profusion. In his scheme of universal history, Mohammed is not worthy to play a part. He is passed by; but the truly great man, the man to whom the human race is really indebted, is—Martin, bishop of Tours. He it is, says Bossuet, whose unrivalled actions filled the universe with his fame, both during his lifetime and after his death. It is true, that not one educated man in fifty has ever heard the name of Martin, bishop of Tours. But Martin performed miracles, and the church had made him a saint; his claims, therefore, to the attention of historians must be far superior to the claims of one who, like Mohammed, was without these advantages. Thus it is that, in the opinion of the only eminent writer on history during the power of Louis XIV., the greatest man Asia has ever produced, and one of the greatest the world has ever seen, is considered in every way inferior to a mean and ignorant monk, whose most important achievement was the erection of a monastery, and who spent the best part of his life in useless solitude, trembling before the superstitious fancies of his weak and ignoble nature.

Such was the narrow spirit with which the great facts of history were contemplated by a writer, who, when he was confined to his own department, displayed the most towering genius. This contracted view was the inevitable consequence of his attempt to explain the complicated movements of the human race by principles which he had generalized from his own inferior studies. Nor need anyone be offended, that, from a scientific point of view, I assign to the pursuits of Bossuet a rank lower than that in which they are sometimes placed. It is certain that religious dogmas do, in many cases, influence the affairs of men. But it is equally certain, that as civilization advances, such influence decreases, and that even when the power of those dogmas was at its height, there were many other motives by which the actions of mankind were also governed. And since the study of history is the study of the aggregate of these

motives, it is evident that history must be superior to theology; just as the whole is superior to a part. A neglect of this simple consideration has, with a few eminent exceptions, led all ecclesiastical authors into serious errors. It has induced in them a disposition to disregard the immense variety of external events, and to suppose that the course of affairs is regulated by some principles which theology alone can detect. This, indeed, is only the result of a general law of the mind, by which those who have any favourite profession, are apt to exaggerate its capacity; to explain events by its maxims, and, as it were, to refract through its medium the occurrences of life.[285] Among theologians, however, such prejudices are more dangerous than in any other profession, because among them alone are they fortified by that bold assumption of supernatural authority on which many of the clergy willingly rely.

These professional prejudices, when supported by theological dogmas, in a reign like that of Louis XIV., are sufficient to account for the peculiarities which mark the historical work of Bossuet. Besides this, in his case, the general tendency was aggravated by personal characteristics. His mind was remarkable for a haughtiness, which we find constantly breaking out into a general contempt for mankind. At the same time his amazing eloquence, and the effects which it never failed to produce, seemed to justify the overweening confidence that he felt in his powers. There is, indeed, in some of his greatest efforts, so much of the fire and majesty of genius, that we are reminded of those lofty and burning words with which the prophets of antiquity thrilled their hearers. Bossuet, thus standing, as he supposed, on an eminence which raised him above the ordinary weaknesses of men, loved to taunt them with their follies, and to deride every aspiration of their genius. Everything like intellectual

[285] And then, as M. Charles Comte well says, they call this prejudice their moral sense, or their moral instinct. *Comte, Traité de Législation*, vol. i. p. 116.

boldness seemed to gall his own superiority.[286] It was this boundless arrogance with which he was filled, which gives to his works some of their most marked peculiarities. It was this, that made him strain every nerve to abase and vilify those prodigious resources of the human understanding, which are often despised by men who are ignorant of them; but which in reality are so great, that no one has yet arisen able to scan them in the whole of their gigantic dimensions. It was this same contempt for the human intellect, that made him deny its capacity to work out for itself the epochs through which it has passed; and, consequently, made him recur to the dogma of supernatural interference. It was this, again, that, in those magnificent orations which are among the greatest wonders of modern art, caused him to exhaust the language of eulogy, not upon intellectual eminence, but upon mere military achievements, upon great conquerors, those pests and destroyers of men, who pass their lives in discovering new ways of slaying their enemies, and in devising new means of aggravating the miseries of the world. And, to descend still lower, it was this same contempt for the dearest interests of mankind, which made him look with reverence upon a king, who considered all those interests as nothing; but who had the merit of enslaving the mind of France, and of increasing the power of that body of men, among whom Bossuet himself was the most distinguished.

In the absence of sufficient evidence respecting the general state of the French at the end of the seventeenth century, it is impossible to ascertain to what extent such notions as these had penetrated the popular mind. But, looking at the manner in which government had broken the spirit of the country, I should be inclined to suppose that the opinions of Bossuet were very acceptable to his own generation. This, however, is a question rather of curiosity than of importance; for only a few years later there appeared

[286] Hardly anyone acquainted with the writings and the history of Bossuet will require evidence of his singular arrogance.

the first symptoms of that unprecedented movement, which not merely destroyed the political institutions of France, but effected a greater and more permanent revolution in every department of the national intellect. At the death of Louis XIV., in literature, as well as in politics, in religion, and in morals, everything was ripe for reaction. The materials still existing are so ample, that it would be possible to trace with considerable minuteness the steps of this great process; but it will, I think, be more agreeable to the general scheme of this Introduction, if I pass over some of the intermediate links, and confine myself to those salient instances in which the spirit of the age is most strikingly portrayed.

There is, indeed, something extraordinary in the change which, in France, one generation was able to effect in the method of writing history. The best way, perhaps, to form an idea of this, will be to compare the works of Voltaire with those of Bossuet; because these great authors were probably the most able, and were certainly the most influential, Frenchmen during the period they respectively represented. The first great improvement which we find in Voltaire, as compared with Bossuet, is an increased perception of the dignity of the human intellect. In addition to the circumstances already noticed, we must remember that the reading of Bossuet lay in a direction which prevented him from feeling this. He had not studied those branches of knowledge where great things have been achieved; but he was very conversant with the writings of the saints and fathers, whose speculations are by no means calculated to give us a high opinion of the resources of their own understanding. Thus accustomed to contemplate the workings of the mind in what is, on the whole, the most puerile literature Europe has ever produced, the contempt which Bossuet felt for mankind went on increasing; until it reached that inordinate degree which, in his later works, is painfully conspicuous. But Voltaire, who paid no attention to such things as these, passed his long life in the constant accumulation of real and available

knowledge. His mind was essentially modern. Despising unsupported authority, and heedless of tradition, he devoted himself to subjects in which the triumph of the human reason is too apparent to be mistaken. The more his knowledge advanced, the more he admired those vast powers by which the knowledge had been created. Hence his admiration for the intellect of man, so far from diminishing, grew with his growth; and, just in the same proportion, there was strengthened his love of humanity, and his dislike to the prejudices which had long obscured its history. That this, in the march of his mind, was the course it actually followed, will be evident to anyone who considers the different spirit of his works, in reference to the different periods of life in which they were produced.

The first historical work of Voltaire was a life of Charles XII., in 1728.[287] At this time his knowledge was still scanty, and he was still influenced by the servile traditions of the preceding generation. It is not, therefore, wonderful, that he should express the greatest respect for Charles, who, among the admirers of military fame, will always preserve a certain reputation; though his only merits are, that he ravaged many countries and killed many men. But we find little sympathy with his unfortunate subjects, the accumulations of whose industry supported the royal armies;[288] nor is there much pity for those nations who were oppressed by this great robber in the immense line of his conquests from Sweden to Turkey. Indeed, the

[287] He says that he wrote it in 1728. *Œuvres de Voltaire*, vol. xxii. p. 5; but, according to M. Lepan (*Vie de Voltaire*, p. 382), "il parut en 1731." Both statements may be accurate, as Voltaire frequently kept his works for some time in manuscript.

[288] Sir A. Alison, who certainly cannot be accused of want of respect for military conquerors, says of Sweden, "the attempt which Charles XII. made to engage her in long and arduous wars, so completely drained the resources of the country, that they did not recover the loss for half a century." *Hist. of Europe*, vol. x. p. 504. Several of the soldiers of Charles XII., who were taken prisoners, were sent into Siberia, where Bell fell in with them early in the eighteenth century.

admiration of Voltaire for Charles is unbounded. He calls him the most extraordinary man the world had ever seen; he declares him to be a prince full of honour; and while he scarcely blames his infamous murder of Patkul,[289] he relates with evident emotion how the royal lunatic at the head of forty servants, resisted an entire army.[290] In the same way, he says, that after the battle of Narva, all the attempts of Charles were unable to prevent medals from being struck at Stockholm in celebration of that event; although Voltaire well knew that a man of such extravagant vanity must have been pleased by so durable a homage, and although it is quite certain that if he had not been pleased, the medals would never have been struck: for who would venture, without an object, to offend, in his own capital, one of the most arbitrary and revengeful of princes?

So far, it might appear that little had been gained in the method of writing history.[291] But, even thus early, we find one vast improvement. In Voltaire's life of Charles XII., faulty as it is, there are none of those assumptions of supernatural interference in which Bossuet delighted, and which were natural to the reign of Louis XIV. The absence of this marks the first great stage in the French school of history in the eighteenth century; and we find the same peculiarity

[289] Which Burke, not without justice, compares to the murder of Monaldeschi by Christina. *Burke's Works*, vol. i. p. 412.

[290] It may interest some persons to hear, that the litter in which this madman "was borne from the battle of Pultava" is still preserved at Moscow, *Kohl's Russia*, p. 220.

[291] Even some of its geographical details are said to be inaccurate. Compare *Villemain, Littérature au XVIII^e Siècle*, vol. ii. p. 33, with *Kohl's Russia*, p. 505. However, as M. Villemain says, this must always be the case, when writers, who only know a country from maps, attempt to enter into details respecting military geography. In regard to style, it cannot be too highly praised; and a well-known critic, Lacretelle, calls it "le modèle le plus accompli de narration qui existe dans notre langue." *Lacretelle, Dixhuitième Siècle*, vol. ii. p. 42. In 1843 it was still used as a text-book in the French royal colleges.

in all the subsequent historians, none of whom recurred to a method, which, though suitable for the purposes of theologians, is fatal to all independent inquiries, since it not only prescribes the course the inquirer is bound to take, but actually sets up a limit beyond which he is forbidden to proceed.

That Voltaire should have infringed upon this ancient method only thirteen years after the death of Louis XIV., and that he should have done this in a popular work, abounding with such dangerous adventures as are always found to tempt the mind to an opposite course, is a step of no common merit, and becomes still more worthy of remark, if taken in connexion with another fact of considerable interest. This is, that the life of Charles XII. represents the first epoch, not only in the eighteenth century, but also in the intellect of Voltaire himself.[292] After it was published, this great man turned a while from history, and directed his attention to some of the noblest subjects: to mathematics, to physics, to jurisprudence, to the discoveries of Newton, and to the speculations of Locke. In these things he perceived those capabilities of the human mind, which his own country had formerly witnessed, but of which, during the authority of Louis XIV. the memory had been almost lost. Then it was that, with extended knowledge and sharpened intellect, he returned to the great field of history.[293] The manner in which he now treated his old subject, showed the change that had come over him. In 1752, appeared his celebrated work on Louis XIV.,[294] the very title of which is suggestive of the process through which his mind had passed. His former history was

[292] It is evident, from Voltaire's correspondence, that he afterwards became somewhat ashamed of the praises he had bestowed on Charles XII.

[293] In 1741, he mentions his increasing love of history.

[294] Lord Brougham, in his life of Voltaire, says that it appeared in 1751. *Lives of Men of Letters*, vol. i. p. 106. But 1752 is the date given in *Biog. Univ.* xlix. 478; in *Quérard, France Lit.* vol. x. p. 355; and in *Lepan, Vie de Voltaire*, p. 382.

an account of a king; this is an account of an age. To the production of his youth he gave the title of a *History of Charles XII.*; this he called the *Age of Louis XIV.* Before, he had detailed the peculiarities of a prince; now, he considered the movements of a people. Indeed, in the introduction to the work, he announces his intention to describe, "not the actions of a single man, but the character of men." Nor, in this point of view, is the execution inferior to the design. While he is contented with giving a summary of military achievements, on which Bossuet hung with delight, he enters at great length into those really important matters which, before his time, found no place in the history of France. He has one chapter on commerce and internal government; another chapter on finances; another on the history of science; and three chapters on the progress of the fine arts. And though Voltaire did not attach much value to theological disputes, still he knew that they have often played a great part in the affairs of men; he, therefore, gives several distinct chapters to a relation of ecclesiastical matters during the reign of Louis. It is hardly necessary to observe the immense superiority which a scheme like this possessed, not only over the narrow views of Bossuet, but even over his own earlier history. Still it cannot be denied, that we find in it prejudices from which it was difficult for a Frenchman, educated in the reign of Louis XVI., to be entirely free. Not only does Voltaire dwell at needless length upon those amusements and debaucheries of Louis, with which history can have little concern, but he displays an evident disposition to favour the king himself, and to protect his name from the infamy with which it ought to be covered.[295]

But the next work of Voltaire showed that this was a mere personal feeling, and did not affect his general

[295] This disposition to favour Louis XIV. is noticed by Condorcet, who says it was the only early prejudice which Voltaire was unable to shake off: "c'est le seul préjugé de sa jeunesse qu'il ait conservé." *Condorcet, Vie de Voltaire,* in

views as to the part which the acts of princes ought to occupy in history. Four years after the appearance of the Age of Louis XVI., he published his important treatise on the *Morals, Manners, and Character of Nations.*[296] This is not only one of the greatest books which appeared during the eighteenth century, but it still remains the best on the subject to which it refers. The mere reading it displays is immense;[297] what, however, is far more admirable, is the skill with which the author connects the various facts, and makes them illustrate each other, sometimes by a single remark, sometimes only by the order and position in which they are placed. Indeed, considered solely as a work of art, it would be difficult to praise it too highly; while, as a symptom of the times, it is important to observe, that it contains no traces of that adulation of royalty which characterized Voltaire in the period of his youth, and which is found in all the best writers during the power of Louis XIV. In the whole of this long and important work, the great historian takes

Œuvres de Voltaire, vol. i. p. 286. It is interesting to observe, that Voltaire's earlier opinions were still more favourable to Louis XIV. than those which he afterwards expressed in his history.

[296] Mr Burton, in his interesting work, *Life and Correspondence of Hume*, vol. ii. p. 129, says it was "first published in 1756;" and the same date is given by Quérard (*France Littéraire*, vol. x. p. 359), who is a very accurate bibliographer; so that Condorcet (*Vie de Voltaire*, p. 199) and Lord Brougham (*Men of Letters*, vol. i. p. 98) are probably in error in assigning it to 1757. In regard to its title, I translate 'Mœurs' as 'morals and manners'; for M. Tocqueville uses 'mœurs' as equivalent to the Latin word 'mores.' *Tocqueville, Démocratie en Amérique*, vol. iii. pp. 50, 84.

[297] Superficial writers are so much in the habit of calling Voltaire superficial, that it may be well to observe, that his accuracy has been praised, not only by his own countrymen, but by several English authors of admitted learning. Even Sir W. Jones, in his preface to the *Life of Nader Shah*, says, that Voltaire is "the best historian" the French have produced. *Works of Sir William Jones*, vol. v. p. 542: compare the preface to his *Persian Grammar*, in *Works*, vol. ii. p. 123.

little notice of the intrigues of courts, or of the changes of ministers, or of the fate of kings; but he endeavours to discover and develop the different epochs through which Man has successively passed. "I wish," he says, "to write a history, not of wars, but of society; and to ascertain how men lived in the interior of their families, and what were the arts which they commonly cultivated." For, he adds, "my object is the history of the human mind, and not a mere detail of petty facts; nor am I concerned with the history of great lords, who made war upon French kings; but I want to know what were the steps by which men passed from barbarism to civilization."

It was in this way, that Voltaire taught historians to concentrate their attention on matters of real importance, and to neglect those idle details with which history had formerly been filled. But what proves this to be a movement arising as much from the spirit of the age as from the individual author, is, that we find precisely the same tendency in the works of Montesquieu and Turgot, who were certainly the two most eminent of the contemporaries of Voltaire; and both of whom followed a method similar to his, in so far as, omitting descriptions of kings, courts, and battles, they confined themselves to points which illustrate the character of mankind, and the general march of civilization. And such was the popularity of this change in the old routine, that its influence was felt by other historians of inferior, but still of considerable, ability. In 1755, Mallet[298] published his interesting, and, at the time it was written, most valuable work, on the history of Denmark; in which he professes himself a pupil of the new school. "For why," he says, "should history be only a recital of battles, sieges, intrigues, and negotiations? And why

[298] Mallet, though born in Geneva, was a Frenchman in the habits of his mind: he wrote in French, and is classed among French historians, in the report presented to Napoleon by the Institut. *Dacier, Rapport sur les Progrès de l'Histoire*, p. 173.

should it contain merely a heap of petty facts and dates, rather than a great picture of the opinions, customs, and even inclinations of a people?" Thus too, in 1765, Mably published the first part of his celebrated work on the history of France;[299] in the preface to which, he complains that historians "have neglected the origin of laws and customs, in favour of sieges and battles." In the same spirit, Velly and Villaret, in their voluminous history of France, express regret that historians should usually relate what happens to the sovereign, in preference to what happens to the people, and should omit the manners and characteristics of a nation, in order to study the acts of a single man. Duclos, again, announces that his history is not of war, nor of politics, but of men and manners: while, strange to say, even the courtly Hénault declares that his object was to describe laws and manners, which he calls the soul of history, or rather history itself.

Thus it was, that historians began to shift, as it were, the scene of their labours, and to study subjects connected with those popular interests, on which the great writers under Louis XIV. disdained to waste a thought. I need hardly observe, how agreeable such views were to the general spirit of the eighteenth century, and how well they harmonized with the temper of men, who were striving to lay aside their former prejudices, and despise what had once been universally admired. All this was but part of that vast movement, which prepared the way for the Revolution, by unsettling ancient opinions, by encouraging a certain mobility and restlessness of mind, and, above all, by the disrespect it showed for those powerful individuals, hitherto regarded as gods rather than as men, but who now, for the first time, were neglected by the greatest and most popular historians, who passed over even their prominent actions, in order to dwell upon the welfare of nations, and the interests of the people at large.

[299] The first two volumes were published in 1765; the other two in 1790. *Biog. Univ.* vol. xxvi. pp. 9, 12.

To return, however, to what was actually effected by Voltaire, there is no doubt that, in his case, this tendency of the time was strengthened by a natural comprehensiveness of mind, which predisposed him to large views, and made him dissatisfied with that narrow range to which history had been hitherto confined. Whatever may be thought of the other qualities of Voltaire, it must be allowed that, in his intellect, everything was on a great scale. Always prepared for thought, and always ready to generalize, he was averse to the study of individual actions, unless they could be made available for the establishment of some broad and permanent principle. Hence his habit of looking at history with a view to the stages through which the country had passed, rather than with a view to the character of the men by whom the country had been governed. The same tendency appears in his lighter works; and it has been well observed, that, even in his dramas, he endeavours to portray, not so much the passions of individuals, as the spirit of epochs. In *Mahomet*, his subject is a great religion; in *Alzire*, the conquest of America; in *Brutus*, the formation of the Roman power; in the *Death of Cæsar*, the rise of the empire upon the ruins of that power.[300]

By this determination to look upon the course of events as a great and connected whole, Voltaire was led to several results, which have been complacently adopted by many authors, who, even while using them, revile him from whom they were taken. He was the first historian who, rejecting the ordinary method of investigation, endeavoured, by large general views, to

[300] The surprising versatility of Voltaire's mind is shown by the fact, unparalleled in literature, that he was equally great as a dramatic writer and as an historian. Mr Forster, in his admirable *Life of Goldsmith*, 1854, says (vol. i. p. 119), "Gray's high opinion of Voltaire's tragedies is shared by one of our greatest authorities on such a matter now living, Sir Edward Bulwer Lytton, whom I have often heard maintain the marked superiority of Voltaire over all his countrymen in the knowledge of dramatic art, and the power of producing theatrical effects."

explain the origin of feudality; and, by indicating some of the causes of its decline in the fourteenth century, he laid the foundation of a philosophic estimate of that important institution.[301] He was the author of a profound remark, afterwards adopted by Constant, to the effect, that licentious religious ceremonies have no connexion with licentious national morals. Another observation of his, which has been only partly used by writers on ecclesiastical history, is pregnant with instruction. He says, that one of the reasons why the bishops of Rome acquired an authority so superior to that of the eastern patriarchs, was the greater subtlety of the Greek mind. Nearly all the heresies proceeded from the east; and, with the exception of Honorius I., not a single pope adopted a system condemned by the church. This gave to the papal power an unity and consolidation, which the patriarchal power was unable to reach; and thus the Holy See owes part of its authority to the early dulness of the European fancy.[302]

It would be impossible to relate all the original remarks of Voltaire, which, when he made them, were attacked as dangerous paradoxes, and are now valued as sober truths. He was the first historian who recommended universal freedom of trade; and, although he

[301] During the eighteenth century, and, I may say, until the publication in 1818 of Hallam's *Middle Ages*, there was in the English language no comprehensive account of the feudal system; unless, perhaps, we except that given by Robertson, who in this, as in many other matters of history, was a pupil of Voltaire. Not only Dalrymple, and writers of his kind, but even Blackstone, took so narrow a view of this great institution, that they were unable to connect it with the general state of society to which it belonged. Some of our historians gravely traced it back to Moses, in whose laws they found the origin of allodial lands.

[302] Neander observes, that in the Greek church there were more heresies than in the Latin church, because the Greeks thought more; but he has failed to perceive how this favoured the authority of the popes. *Neander's Hist. of the Church*. vol. ii. pp. 198, 199, vol. iii. pp. 191, 492, vol. iv. p. 90, vol. vi. p. 293, vol. viii. p. 257.

expresses himself with great caution, still the mere announcement of the idea in a popular history, forms an epoch in the progress of the French mind. He is the originator of that important distinction between the increase of population and the increase of food, to which political economy has been greatly indebted ;[303] a principle adopted several years later by Townsend, and then used by Malthus as the basis of his celebrated work.[304] He has, moreover, the merit of being the first who dispelled the childish admiration with which the Middle Ages had been hitherto regarded, and which they owed to those dull and learned writers, who, in the sixteenth and seventeenth centuries, were the principal investigators of the early history of Europe. These industrious compilers had collected extensive materials which Voltaire turned to good account, and by their aid overthrew the conclusions at which the authors had themselves arrived. In his works, the Middle Ages are, for the first time, represented as what they really were—a period of ignorance, ferocity, and licentiousness; a period when injuries were unredressed, crime unpunished, and superstition unrebuked. It may be said, with some show of justice, that Voltaire, in the picture he drew, fell into the opposite extreme, and did not sufficiently recognize the merit of those truly great men, who, at long inter-

[303] "The idea of the different ratios by which population and food increase, was originally thrown out by Voltaire; and was picked up and expanded into many a goodly volume by our English political economists in the present century." *Laing's Notes*, second series, p. 42.

[304] It is often said that Malthus was indebted to Townsend's writings for his views on population; but this obligation has been too strongly stated, as, indeed, is always the case when charges of plagiarism are brought against great works. Still, Townsend is to be considered as the precursor of Malthus; and if the reader is interested in tracing the paternity of ideas, he will find some interesting economical remarks in *Townsend's Journey through Spain*, vol. i. pp. 379. 383, vol. ii. pp. 85, 337, 387-393; which must be compared with *M'Culloch's Literature of Political Economy*, pp. 259, 281-3.

vals, stood here and there, like solitary beacons, whose light only made the surrounding darkness more visible. Still, after every allowance for that exaggeration which a reaction of opinions always causes, it is certain that his view of the Middle Ages is not only far more accurate than that of any preceding writer, but conveys a much juster idea of the time than can be found in those subsequent compilations which we owe to the industry of modern antiquaries; a simple and plodding race, who admire the past because they are ignorant of the present, and who, spending their lives amid the dust of forgotten manuscripts, think themselves able, with the resources of their little learning, to speculate on the affairs of men, to trace the history of different periods, and even to assign to each the praise it ought to receive.

With such writers as these, Voltaire was always at war; and no one has done so much to lessen the influence they once exercised over even the highest branches of knowledge. There was also another class of dictators, whose authority this great man was equally successful in reducing, namely, the old class of classical scholars and commentators, who, from the middle of the fourteenth till early in the eighteenth century, were the chief dispensers of fame, and were respected as being by far the most distinguished men Europe had ever produced. The first great assaults made upon them were late in the seventeenth century, when two controversies sprung up, of which I shall hereafter give an account—one in France, and one in England—by both of which their power was considerably damaged. But their two most formidable opponents were, undoubtedly, Locke and Voltaire. The immense services rendered by Locke in lessening the reputation of the old classical school, will be examined in another part of this work; at present we are only concerned with the steps taken by Voltaire.

The authority wielded by the great classical scholars, rested not only on their abilities, which are undeniable, but also on the supposed dignity of their pursuits. It was generally believed that ancient history possessed some

inherent superiority over modern history; and this being taken for granted, the inference naturally followed, that the cultivators of the one were more praiseworthy than the cultivators of the other; and that a Frenchman, for instance, who should write the history of some Greek republic, displayed a nobler turn of mind than if he had written the history of his own country. This singular prejudice had for centuries been a traditional notion; which men accepted, because they had received it from their fathers, and which it would have been almost an impiety to dispute. The result was, that the few really able writers on history devoted themselves chiefly to that of the ancients; or, if they published an account of modern times, they handled their theme, not according to modern ideas, but according to ideas gathered from their more favourite pursuit. This confusion of the standard of one age with the standard of another, caused a double evil. Historians, by adopting this plan, injured the originality of their own minds; and, what was far worse, they set a bad example to the literature of their country. For, every great nation has a mode of expression and of thought, peculiar to itself, and with which its sympathies are intimately connected. To introduce any foreign model, however admirable it may be, is to violate this connexion, and to impair the value of literature by limiting the scope of its action. By such a course, the taste may possibly be refined, but the vigour will certainly be weakened. Indeed, the refinement of the taste may well be doubted, when we see what has taken place in our country, where our great scholars have corrupted the English language by a jargon so uncouth, that a plain man can hardly discern the real lack of ideas which their barbarous and mottled dialect strives to hide.[305] At all events, it is

[305] With the single exception of Porson, not one of the great English scholars has shown an appreciation of the beauties of his native language; and many of them, such as Parr (in all his works) and Bentley (in his mad edition of Milton), have done everything in their power to corrupt it. And there can be little

certain, that every people worthy of being called a nation, possess in their own language ample resources for expressing the highest ideas they are able to form; and although, in matters of science, it may be convenient to coin such words as are more easily understood in foreign countries, it is a grave offence to depart on other subjects from the vernacular speech; and it is a still graver one, to introduce notions and standards for action, suited perhaps to former times, but which the march of society has left far behind, and with which we have no real sympathy, though they may excite that sickly and artificial interest, which the classical prejudices of early education still contrive to create.

It was against these evils that Voltaire entered the field. The wit and the ridicule with which he attacked the dreaming scholars of his own time, can only be appreciated by those who have studied his works. Not, as some have supposed, that he used these weapons as a substitute for argument, still less that he fell into the error of making ridicule a test for truth. No one could reason more closely than Voltaire, when reasoning suited his purpose. But he had to deal with men impervious to argument; men whose inordinate reverence for antiquity had only left them two ideas, namely, that everything old is right, and that everything new is wrong. To argue against these opinions would be idle indeed; the only other resource was, to make them ridiculous, and weaken their influence, by holding up

doubt, that the principal reason why well-educated women write and converse in a purer style than well-educated men, is because they have not formed their taste according to those ancient classical standards, which, admirable as they are in themselves, should never be introduced into a state of society unfitted for them. To this may be added, that Cobbett, the most racy and idiomatic of all our writers, and Erskine, by far the greatest of our forensic orators, knew little or nothing of any ancient language; and the same observation applies to Shakespeare. On the supposed connexion between the improvement of taste and the study of classical models, there are some remarks worth attending to in *Rey's Théorie et Pratique de la Science Sociale*, vol. i. pp. 98-101.

their authors to contempt. This was one of the tasks Voltaire set himself to perform; and he did it well.[306] He, therefore, used ridicule, not as the test of truth, but as the scourge of folly. And with such effect was the punishment administered, that not only did the pedants and theologians of his own time wince under the lash, but even their successors feel their ears tingle when they read his biting words; and they revenge themselves by reviling the memory of that great writer, whose works are as a thorn in their side, and whose very name they hold in undisguised abhorrence.

These two classes have, indeed, reasons enough for the hatred with which they still regard the greatest Frenchman of the eighteenth century. For, Voltaire did more than any other man to sap the foundation of ecclesiastical power, and to destroy the supremacy of classical studies. This is not the place for discussing the theological opinions which he attacked; but of the state of classical opinions an idea may be formed, by considering some of those circumstances which were recorded by the ancients respecting their history, and which, until the appearance of Voltaire, were implicitly believed by modern scholars, and through them by the people at large.

It was believed that, in ancient times, Mars ravished a virgin, and that the offspring of the intrigue were no other than Romulus and Remus, both of whom it was intended to put to death; but they were fortunately saved by the attentions of a she-wolf and a woodpecker; the wolf giving them suck, and the woodpecker protecting them from insects. It was moreover, believed

306 "We can best judge from the Jesuitical rage with which he was persecuted, how admirably he had delineated the weaknesses and presumption of the interpreters of the ancients, who shone in the schools and academies, and had acquired great reputation by their various and copiously exhibited learning." *Schlosser's Eighteenth Century*, vol. i. p. 120. At p. 270, M. Schlosser says, "And it was only a man of Voltaire's wit and talents, who could throw the light of an entirely new criticism upon the darkness of those grubbing and collecting pedants."

that Romulus and Remus, when grown up to man's estate, determined to build a city, and that, being joined by the descendants of the Trojan warriors, they succeeded in erecting Rome. It was believed that both brothers came to an untimely end; Remus being murdered, and Romulus being taken up to heaven by his father, who descended for that purpose in the midst of a tempest. The great scholars then proceeded to relate the succession of several other kings; the most remarkable of whom was Numa, whose only communications with his wife were carried on in a sacred grove. Another of the sovereigns of Rome was Tullus Hostilius, who, having offended the clergy, perished from the effects of their anger; his death being caused by lightning, and preceded by pestilence. Then again, there was one Servius Tullius, who was also a king, and whose greatness was prognosticated by the appearance of flames round his head as he was sleeping in his cradle. After this, it was but a slight matter that the ordinary laws of mortality should be suspended; we were, therefore, assured that those ignorant barbarians, the early Romans, passed two hundred and forty-five years under the government of only seven kings, all of whom were elected in the prime of life, one of whom was expelled the city, and three of whom were put to death.

These are a few of the idle stories in which the great scholars took intense delight, and which, during many centuries, were supposed to form a necessary part of the annals of the Latin empire. Indeed, so universal was the credulity, that, until they were destroyed by Voltaire, there were only four writers who had ventured openly to attack them. Cluverius, Perizonius, Pouilly, and Beaufort, were the names of these bold innovators; but by none of them was any impression made on the public mind. The works of Cluverius and Perizonius, being composed in Latin, were addressed entirely to a class of readers who, infatuated with a love of antiquity, would listen to nothing that diminished the reputation of its history. Pouilly and Beaufort

wrote in French ; both of them, and especially Beaufort, were men of considerable ability; but their powers were not versatile enough to enable them to extirpate prejudices which were so strongly protected, and which had been fostered by the education of many successive generations.

The service, therefore, rendered by Voltaire in purging history of these foolish conceits, is, not that he was the first by whom they were attacked, but that he was the first to attack them with success ; and this because he was also the first who mingled ridicule with argument, thus not only assailing the system, but also weakening the authority of those by whom the system was supported. His irony, his wit, his pungent and telling sarcasms, produced more effect than the gravest arguments could have done; and there can be no doubt that he was fully justified in using those great resources with which nature had endowed him, since by their aid he advanced the interests of truth, and relieved men from some of their most inveterate prejudices.

It is not, however, to be supposed that ridicule was the only means employed by Voltaire in effecting this important object. So far from that, I can say with confidence, after a careful comparison of both writers, that the most decisive arguments advanced by Niebuhr against the early history of Rome, had all been anticipated by Voltaire ; in whose works they may be found, by whoever will take the trouble of reading what this great man has written, instead of ignorantly railing against him. Without entering into needless detail, it is enough to mention that, amidst a great variety of very ingenious and very learned discussion, Niebuhr has put forward several views with which later critics have been dissatisfied ; but that there are three, and only three, principles which are fundamental to his history, and which it is impossible to refute. These are :—I. That, on account of the inevitable intermixture of fable essential to a rude people, no nation can possess trustworthy details respecting its own origin. II. That even such early documents as the

Romans might have possessed, had been destroyed before they were incorporated into a regular history. III. That ceremonies established in honour of certain events alleged to have taken place in former times, were a proof, not that the events had happened, but that they were believed to have happened. The whole fabric of the early history of Rome at once fell to pieces, as soon as these three principles were applied to it. What, however, is most remarkable, is, that not only are all three laid down by Voltaire, but their bearing upon Roman history is distinctly shown. He says that no nation is acquainted with its own origin; so that all primitive history is necessarily an invention. He remarks, that since even such historical works as the Romans once possessed, were all destroyed when their city was burned, no confidence can be placed in the accounts which, at a much later period, are given by Livy and other compilers. And, as innumerable scholars busied themselves in collecting evidence respecting ceremonies instituted in celebration of certain events, and then appealed to the evidence in order to prove the events, Voltaire makes a reflection which now seems very obvious, but which these learned men had entirely overlooked. He notices, that their labour is bootless, because the date of the evidence is, with extremely few exceptions, much later than the date of the event to which it refers. In such cases, the existence of a festival, or of a monument, proves, indeed, the belief which men entertain, but by no means proves the reality of the occurrence concerning which the belief is held. This simple, but important maxim is, even in our own days, constantly lost sight of, while before the eighteenth century it was universally neglected. Hence it was that historians were able to accumulate fables which were believed without examination; it being altogether forgotten that fables, as Voltaire says, begin to be current in one generation, are established in the second, become respectable in the third, while in the fourth generation temples are raised in honour of them.

I have been the more particular in stating the immense obligations history is under to Voltaire, because in England there exists against him a prejudice, which nothing but ignorance, or something worse than ignorance, can excuse;[307] and because, taking him on the whole, he is probably the greatest historian Europe has yet produced. In reference, however, to the mental habits of the eighteenth century, it is important to show, that in the same period similar comprehensiveness was being displayed by other French historians; so that in this case, as in all others, we shall find that a large share of what is effected, even by the most eminent men, is due to the character of the age in which they live.

The vast labours of Voltaire towards reforming the old method of writing history, were greatly aided by those important works which Montesquieu put forward during the same period. In 1734, this remarkable man published what may be truly called the first book in which there can be found any information concerning the real history of Rome; because it is also the first in which the affairs of the ancient world are treated in a large and comprehensive spirit.[308] Four-

[307] In this case, as in many others, ignorance has been fortified by bigotry; for, as Lord Campbell truly says of Voltaire, "since the French Revolution, an indiscriminate abuse of this author has been in England the test of orthodoxy and loyalty." *Campbell's Chief-Justices*, vol. ii. p. 335. Indeed, so extensively has the public mind been prejudiced against this great man, that, until a very few years ago, when Lord Brougham published a life of him, there was no book in the English language containing even a tolerable account of one of the most influential writers France has produced. This work of Lord Brougham's, though a middling performance, is at least an honest one, and, as it harmonizes with the general spirit of our time, it has probably had considerable weight. In it he says of Voltaire, "nor can anyone since the days of Luther be named to whom the spirit of free inquiry, nay, the emancipation of the human mind from spiritual tyranny, owes a more lasting debt of gratitude."—*Brougham's Life of Voltaire*, p. 132.

[308] Before Montesquieu, the only two great thinkers who had

teen years later, there appeared, by the same author, the *Spirit of Laws*; a more famous production, but, as it seems to me, not a greater one. The immense merit of the *Spirit of Laws* is, indeed, incontestable, and cannot be affected by the captious attempts made to diminish it by those minute critics, who seem to think that when they detect the occasional errors of a great man, they in some degree reduce him to their own level. It is not such petty cavilling which can destroy an European reputation; and the noble work of Montesquieu will long survive all attacks of this kind, because its large and suggestive generalizations would retain their value even if the particular facts of which the illustrations consist were all unfounded.[309] Still, I am inclined to believe, that in point of original thought it is barely equal to his earlier work, though it is unquestionably the fruit of much greater reading. Without, however, instituting a comparison between them, our present object is merely to consider the contributions they jointly contain towards a right understanding of history, and the way in which those contributions are connected with the general spirit of the eighteenth century.

In this point of view, there are, in the works of Montesquieu, two leading peculiarities. The first is, the complete rejection of those personal anecdotes, and those trivial details respecting individuals, which belong to biography, but with which, as Montesquieu

really studied Roman history were Macchiavelli and Vico: but Macchiavelli did not attempt anything approaching the generalizations of Montesquieu, and he suffered, moreover, from the serious deficiency of being too much occupied with the practical utility of his subject. Vico, whose genius was perhaps even more vast than that of Montesquieu, can hardly be considered his rival; for, though his *Scienza Nuova* contains the most profound views on ancient history, they are rather glimpses of truth, than a systematic investigation of any one period.

[309] Which M. Guizot (*Civilisation en France*, vol. iv. p. 36), in his remarks on the *Esprit des Lois*, does not take sufficiently into consideration.

clearly saw, history has no concern. The other peculiarity is, the very remarkable attempt which he first made to effect an union between the history of man and those sciences which deal with the external world. As these are the two great characteristics of the method adopted by Montesquieu, it will be necessary to give some account of them, before we can understand the place he really occupies, as one of the founders of the philosophy of history.

We have already seen that Voltaire had strongly insisted on the necessity of reforming history, by paying more attention to the history of the people, and less attention to that of their political and military rulers. We have also seen, that this great improvement was so agreeable to the spirit of the time, that it was generally and quickly adopted, and thus became an indication of those democratic tendencies, of which it was in reality a result. It is not, therefore, surprising that Montesquieu should have taken the same course, even before the movement had been clearly declared; since he, like most great thinkers, was a representative of the intellectual condition, and a satisfier of the intellectual wants, of the age in which he lived.

But, what constitutes the peculiarity of Montesquieu in this matter, is, that with him a contempt for those details respecting courts, ministers, and princes, in which ordinary compilers take great delight, was accompanied by an equal contempt for other details which are really interesting, because they concern the mental habits of the few truly eminent men who, from time to time, have appeared on the stage of public life. This was because Montesquieu perceived that, though these things are very interesting, they are also very unimportant. He knew, what no historian before him had even suspected, that in the great march of human affairs, individual peculiarities count for nothing; and that, therefore, the historian has no business with them, but should leave them to the biographer, to whose province they properly belong. The consequence is, that not only does he treat the most

powerful princes with such disregard, as to relate the reigns of six emperors in two lines, but he constantly enforces the necessity, even in the case of eminent men, of subordinating their special influence to the more general influence of the surrounding society. Thus, many writers had ascribed the ruin of the Roman Republic to the ambition of Cæsar and Pompey, and particularly to the deep schemes of Cæsar. This, Montesquieu totally denies. According to his view of history, no great alteration can be effected, except by virtue of a long train of antecedents, where alone we are to seek the cause of what to a superficial eye is the work of individuals. The republic, therefore, was overthrown, not by Cæsar and Pompey, but by that state of things which made the success of Cæsar and Pompey possible. It is thus that the events which ordinary historians relate, are utterly valueless. Such events, instead of being causes, are merely the occasions on which the real causes act. They may be called the accidents of history; and they must be treated as subservient to those vast and comprehensive conditions, by which alone the rise and fall of nations are ultimately governed.

This, then, was the first great merit of Montesquieu, that he effected a complete separation between biography and history, and taught historians to study, not the peculiarities of individual character, but the general aspect of the society in which the peculiarities appeared. If this remarkable man had acccomplished nothing further, he would have rendered an incalculable service to history, by pointing out how one of its most fertile sources of error might be safely removed. And although, unhappily, we have not yet reaped the full benefit of his example, this is because his successors have rarely had the capacity of rising to so high a generalization: it is, however, certain, that since his time, an approximation towards such elevated views may be noticed, even among those inferior writers who, for want of sufficient grasp, are unable to adopt them to their full extent.

In addition to this, Monte[redacted] another great advance in the method of treating history. He was the first who, in an inquiry into the relations between the social conditions of a country and its jurisprudence, called in the aid of physical knowledge, in order to ascertain how the character of any given civilization is modified by the action of the external world. In his work on the *Spirit of Laws*, he studies the way in which both the civil and political legislation of a people are naturally connected with their climate, soil, and food. It is true, that in this vast enterprise he almost entirely failed; but this was because meteorology, chemistry, and physiology, were still too backward to admit of such an undertaking. This, however, affects the value only of his conclusions, not of his method; and here, as elsewhere, we see the great thinker tracing the outline of a plan, which, in the then state of knowledge, it was impossible to fill up, and the completion of which he was obliged to leave to the riper experience and more powerful resources of a later age. Thus to anticipate the march of the human intellect, and, as it were, forestall its subsequent acquisitions, is the peculiar prerogative of minds of the highest order; and it is this which gives to the writings of Montesquieu a certain fragmentary and provisional appearance, which was the necessary consequence of a profoundly speculative genius dealing with materials that were intractable, simply because science had not yet reduced them to order by generalizing the laws of their phenomena. Hence it is, that many of the inferences drawn by Montesquieu are untenable; such, for instance, as those regarding the effect of diet in stimulating population by increasing the fecundity of women, and the effect of climate in altering the proportion between the births of the sexes. In other cases, an increased acquaintance with barbarous nations has sufficed to correct his conclusions, particularly those concerning the effect which he supposed climate to produce on individual character; for we have now the most decisive evidence, that he was wrong in asserting that

hot clim[redacted]unchaste and cowardly, while cold climates make the... virtuous and brave.

These, indeed, are comparatively trifling objections, because, in all the highest branches of knowledge, the main difficulty is, not to discover facts, but to discover the true method according to which the laws of the facts may be ascertained.[310] In this, Montesquieu performed a double service, since he not only enriched history, but also strengthened its foundation. He enriched history by incorporating with it physical inquiries; and he strengthened history by separating it from biography, and thus freeing it from details which are always unimportant, and often unauthentic. And although he committed the error of studying the influence of nature over men considered as individuals,[311] rather than over men considered as an aggregate society, this arose principally from the fact that, in his time, the resources necessary for the more complicated study had not yet been created. Those resources, as I have shown, are political economy and statistics; political economy supplying the means of connecting the laws of physical agents with the laws of the inequality of wealth, and, therefore, with a great variety of social disturbances; while statistics enable us to verify those laws in their widest extent, and to prove how completely the volition of individual men is controlled by their antecedents, and by the circumstances in which they are placed. It was, therefore, not only natural, but inevitable, that Montesquieu should fail in his magnificent attempt to unite the laws of the human mind with the laws of

310 On the supreme importance of method, see my defence of Bichat in the next chapter.

311 How completely futile this was, as regards results, is evident from the fact, that a hundred years after he wrote, we, with all our increased knowledge, can affirm nothing positively respecting the direct action of climate, food and soil, in modifying individual character; though it has, I trust, appeared in the second chapter of this Introduction, that something can be ascertained respecting their indirect action, that is, their action on individual minds through the medium of social and economical organization.

external nature. He failed, [illegible] the sciences of external nature were too backward, and partly because those other branches of knowledge which connect nature with man were still unformed. For, as to political economy, it had no existence as a science until the publication of the *Wealth of Nations* in 1776, twenty-one years after the death of Montesquieu. As to statistics, their philosophy is a still more recent creation, since it is only during the last thirty years that they have been systematically applied to social phenomena; the earlier statisticians being merely a body of industrious collectors, groping in the dark, bringing together facts of every kind without selection or method, and whose labours were consequently unavailable for those important purposes to which they have been successfully applied during the present generation.

Only two years after the publication of the *Spirit of Laws*, Turgot delivered those celebrated lectures, of which it has been said, that in them he created the philosophy of history. This praise is somewhat exaggerated; for in the most important matters relating to the philosophy of his subject, he takes the same view as Montesquieu; and Montesquieu, besides preceding him in point of time, was his superior certainly in learning, perhaps in genius. Still, the merit of Turgot is immense; and he belongs to that extremely small class of men, who have looked at history comprehensively, and have recognized the almost boundless knowledge needed for its investigation. In this respect, his method is identical with that of Montesquieu, since both of these great men excluded from their scheme the personal details which ordinary historians accumulate, and concentrated their attention upon those large general causes, by the operation of which the destinies of nations are permanently affected. Turgot clearly perceived, that, notwithstanding the variety of events produced by the play of human passions, there is amid this apparent confusion, a principle of order, and a regularity of march, not to be mistaken by those whose grasp is firm enough to seize the history of man as a

complete [illegible]le. It is true that Turgot, subsequently engaged [illegible]olitical life, never possessed sufficient leisure to fill up the splendid outline of what he so successfully sketched: but though in the execution of his plan he fell short of Montesquieu, still the analogy between the two men is obvious, as also is their relation to the age in which they lived. They, as well as Voltaire, were the unconscious advocates of the democratic movement, inasmuch as they discountenanced the homage which historians had formerly paid to individuals, and rescued history from being a mere recital of the deeds of political and ecclesiastical rulers. At the same time, Turgot, by the captivating prospects which he held out of future progress,[312] and by the picture which he drew of the capacity of society to improve itself, increased the impatience which his countrymen were beginning to feel against that despotic government, in whose presence amelioration seemed to be hopeless. These, and similar speculations, which now for the first time appeared in French literature, stimulated the activity of the intellectual classes, cheered them under the persecutions to which they were exposed, and emboldened them to the arduous enterprise of leading on the people to attack the institutions of their native land. Thus it was, that in France everything tended to the same result. Everything indicated the approach of some sharp and terrible struggle, in which the spirit of the present should war with the spirit of the past; and in which it should be finally settled, whether the people of France could free themselves from the chains in which they had long been held, or whether, missing their aim, they were doomed to sink still lower in that ignominious vassalage, which makes even the most splendid periods of their political history a warning and a lesson to the civilized world.

[312] A confidence which is apparent in his economical as well as in his historical works. In 1811, Sir James Mackintosh writes, that Turgot "had more comprehensive views of the progress of society than any man since Bacon": *Mem. of Mackintosh*, vol. ii. p. 133.

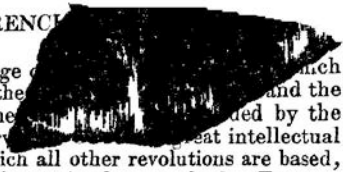
CHAPTER VII

Proximate Causes of the French Revolution after the Middle of the Eighteenth Century.

In the last chapter but one, I have attempted to ascertain what those circumstances were which, almost immediately after the death of Louis XIV., prepared the way for the French Revolution. The result of the inquiry has been, that the French intellect was stimulated into activity by the examples and teachings of England; and that this stimulus caused, or at all events encouraged, a great breach between the government of France and its literature—a breach the more remarkable, because during the reign of Louis XIV. the literature, notwithstanding its temporary brilliancy, had been invariably submissive, and had intimately allied itself with the government, which was always ready to reward its services. We have also seen that, this rupture having arisen between the governing classes and the intellectual classes, it followed, that the former, true to their ancient instincts, began to chastize that spirit of inquiry to which they were unaccustomed: hence those persecutions which, with hardly a single exception, were directed against every man of letters, and hence too those systematic attempts to reduce literature to a subserviency similar to that in which it had been held under Louis XIV. It has, moreover, appeared that the great Frenchmen of the eighteenth century, though smarting from the injuries constantly inflicted on them by the government and the church, abstained from attacking the government, but directed all their hostility against the church. This

gious institutions being assail[illegible]titutions being spared, has been [illegible] natural circumstance, arising out [illegible] the French nation; and an attempt has been made [illegible] explain what those antecedents were, and how they acted. In the present chapter, I purpose to complete this inquiry by examining the next great stage in the history of the French mind. It was needful that, before both church and state could fall, men should change the ground of their hostility, and should attack political abuses with the zeal they had hitherto reserved for religious ones. The question, therefore, now arises, as the circumstances under which this change took place, and the period when it actually occurred.

The circumstances which accompanied this great change are, as we shall presently see, very complicated; and, as they have never yet been studied in connexion with each other, I shall, in the remaining part of this volume, examine them at considerable length. On this point it will, I think, be practicable to arrive at some precise and well-defined results respecting the history of the French Revolution. But the other point, namely, the time at which the change took place, is not only much more obscure, but by its nature will never admit of complete precision. This, however, is a deficiency it possesses in common with every other change in the history of man. The circumstances of each change may always be known, provided the evidence is ample and authentic. But no amount of evidence can enable us to fix the date of the change itself. That to which attention is usually drawn. by the compilers of history is, not the change, but is merely the external result which follows the change. The real history of the human race is the history of tendencies which are perceived by the mind, and not of events which are discerned by the senses. It is on this account that no historical epoch will ever admit of that chronological precision familiar to antiquaries and genealogists. The death of a prince, the loss of a



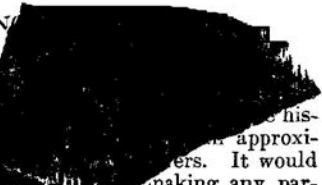
battle, and the change ... fall entirely within the ... moment in which the ... most ordinary observ... revolutions upon which all other revolutions are based, cannot be measured by so simple a standard. To trace the movements of the human mind, it is necessary to contemplate it under several aspects, and then co-ordinate the results of what we have separately studied. By this means we arrive at certain general conclusions, which, like the ordinary estimate of averages, increase in value in proportion as we increase the number of instances from which they are collected. That this is a safe and available method, appears not only from the history of physical knowledge, but also from the fact, that it is the basis of the empirical maxims by which all men of sound understanding are guided in those ordinary transactions of life to which the generalizations of science have not yet been applied. Indeed such maxims, which are highly valuable, and which in their aggregate form what is called common sense, are never collected with anything like the precautions that the philosophic historian ought to feel himself bound to employ.

The real objection, therefore, to generalizations respecting the development of the intellect of a nation is, not that they want certainty, but that they lack precision. This is just the point at which the historian diverges from the annalist. That the English intellect, for example, is gradually becoming more democratic, or, as it is termed, more liberal, is as certain as that the crown of this country is worn by Queen Victoria. But though both these statements are equally certain, the latter statement is more precise. We can tell the very day on which the Queen ascended the throne: the moment of her death will be known with equal precision; and there can be no doubt that many other particulars respecting her will be minutely and accurately preserved. In tracing, however, the growth of English liberalism, all such exactness deserts us. We

ca… h the Reform Bill was passed … the year in which the Reform B… y? In the same way, that the Jews … into parliament, is as certain as that the Catholics have been admitted. Both these measures are the inevitable result of that increasing indifference to theological disputes, which must now be obvious to every man who does not wilfully shut his eyes. But while we know the hour in which the bill for Catholic emancipation received the assent of the crown, there is no one now living who can tell even the year in which similar justice will be granted to the Jews. Both events are equally certain, but both events are not equally precise.

This distinction between certainty and precision I have stated at some length, because it seems to be little understood,[313] and because it is intimately connected with the subject now before us. The fact of the French intellect having, during the eighteenth century, passed through two totally distinct epochs, can be proved by every description of evidence; but

[313] As we see in the pretensions set forth by mathematicians, who often suppose that an amount of certainty can be attained in their own pursuits not to be found in any other. This error has probably arisen, as Locke suggests, from confusing clearness with certainty. *Essay on Human Understanding*, book iv. chap. ii. secs. 9 and 10 in *Works*, vol. ii. pp. 73, 74. See also *Comte, Philos. Pos.* vol. i. p. 103, where it is justly observed, that all branches of knowledge capable of being generalized into sciences admit of equal certainty, but not of equal precision: "si, d'après l'explication précédente, les diverses sciences doivent nécessairement présenter une précision très-inégale, il n'en est nullement ainsi de leur certitude." This is handled unsatisfactorily by Montucla (*Hist. des Mathémat.* vol. i. p. 33), who says, that the principal cause of the peculiar certainty reached by the mathematician is, that "d'une idée claire il ne déduit que des conséquences claires et incontestables." Similarly, Cudworth (*Intellect. System*, vol. iii. p. 377): "nay the very essence of truth here is this clear perceptibility, or intelligibility." On the other hand, Kant, a far deeper thinker, avoided this confusion, by making mathematical clearness the mark of a *kind* of certainty rather than of a *degree* of it."



it is impossible to a

particular statement
seems necessary to bring such matters clearly before the mind, I will, by way of provisional hypothesis, fix on the year 1750, as the period when those agitations of society which caused the French Revolution entered into their second and political stage.

That this was about the period when the great movement, hitherto directed against the church, began, to be turned against the state, is an inference which many circumstances seem to warrant. We know on the best authority, that towards the year 1750, the French began their celebrated inquiries respecting political economy, and that in their attempt to raise it to a science, they were led to perceive the immense injury which the interference of government had produced on the material interests of the country.[314] Hence a conviction arose that, even in regard to the accumulation of wealth, the authority possessed by the rulers of France was mischievous, since it enabled them under the notion of protecting commerce, to trouble the freedom of individual action, and to prevent trade from running into those profitable channels which traders are best able to select for themselves. Scarcely had a knowledge of this important truth been diffused, when its consequences were quickly seen in the national literature, and in the habits of national thought. The sudden increase in France of works relating to finance and to other questions of government, is, indeed, one of the most remarkable features of that age. With such rapidity did the movement spread, that we are told that,

[314] The revolutionary tendency of this economical movement is noticed in *Alison's Europe*, vol. i. pp. 184, 185; where, however, its commencement is erroneously assigned to "about the year 1671."

ffected a schism be-
nt ;[315] and Voltaire,
writin charms of lighter
literature amidst the general
zeal for these not necessary to
follow the subseq his great change ;
nor need I trace the minu sed shortly before
the Revolution by the later economists, and particularly by Turgot, the most eminent of their leaders. It is enough to say, that within about twenty years after the movement was first clearly seen, the taste for economical and financial inquiries became so common, that it penetrated those parts of society where habits of thought are not very frequent ; since we find that, even in fashionable life, the conversation no longer turned upon new poems and new plays, but upon political questions, and subjects immediately connected with them. Indeed, when Necker, in 1781, published his celebrated Report on the Finances of France, the eagerness to obtain it was beyond all bounds ; six thousand copies were sold the first day ; and the demand still increasing, two presses were kept constantly at work in order to satisfy the universal curiosity. And what makes the democratic tendency of all this the more obvious is, that Necker was at that time one of the servants of the crown ; so that his work, looking at its general spirit, has been truly called an appeal to the people against the king by one of the ministers of the king himself.

This evidence of the remarkable change which, in or about 1750, the French mind underwent, and which formed what I term the second epoch of the eighteenth century, might be easily strengthened by a wider survey of the literature of that time. Immediately after the middle of the century, Rousseau published those eloquent works, which exercised immense influence, and in which the rise of the new epoch is very

[315] In this same year, 1755, Goldsmith was in Paris, and was so struck by the progress of insubordination, that he foretold the freedom of the people ; though I need hardly say that he was not a man to understand the movement of the economists.

of the succeed-
py too large a share of this

The formation of a new epoch in France, about the year 1750, may be further illustrated by three circumstances of considerable interest, all pointing in the same direction. The first circumstance is, that not a single great French writer attacked the political institutions of the country before the middle of the century; while, after that period, the attacks of the ablest men were incessant. The second circumstance is, that the only eminent Frenchmen who continued to assail the clergy, and yet refused to interfere in politics, were those who, like Voltaire, had already

[316] So far as I remember, there is not a single instance in any of his works; and those who assail him on this ground should adduce the passages on which they rely, instead of bringing vague general charges.

[317] Napoleon said to Stanislas Girardin respecting Rousseau, "sans lui la France n'auroit pas eu de révolution." *Holland's Foreign Reminiscences*, Lond. 1850, p. 261. This is certainly an exaggeration; but the influence of Rousseau was, during the latter half of the eighteenth century, most extraordinary. In 1765, Hume writes from Paris: "It is impossible to express or imagine the enthusiasm of this nation in his favour; . . . no person ever so much engaged their attention as Rousseau. Voltaire and everybody else are quite eclipsed by him." *Burton's Life of Hume*, vol. ii. p. 299.

had, therefore drawn
generation, in which
ct of hostility. The
more striking than
the the same moment
there was icy of the govern-
ment; since, s e ministers of the
crown displayed for the an open enmity
against the church, just as the intellect of the country was preparing for its decisive onslaught on the government itself. Of these three propositions, the first two will probably be admitted by every student of French literature: at all events, if they are false, they are so exact and peremptory, that it will be easy to refute them by giving examples to the contrary. But the third proposition, being more general, is less susceptible of a negative, and will therefore require the support of that special evidence which I will now adduce.

The great French writers having by the middle of the eighteenth century succeeded in sapping the foundations of the church, it was natural that the government should step in and plunder an establishment which the course of events had weakened. This, which took place in France under Louis XV., was similar to what occurred in England under Henry VIII.; for in both cases a remarkable intellectual movement, directed against the clergy, preceded and facilitated the attacks made on them by the crown. It was in 1749 that the French government took the first decisive step against the church. And what proves the hitherto backward state of the country in such matters is, that this consisted of an edict against mortmain, a simple contrivance for weakening the ecclesiastical power, which we in England had adopted long before. Machault, who had recently been raised to the office of controller-general, has the glory of being the originator of this new policy. In August 1749, he issued that celebrated edict which forbade the formation of any religious establishment without the consent of the

crown, duly expressed
in parliament; effect

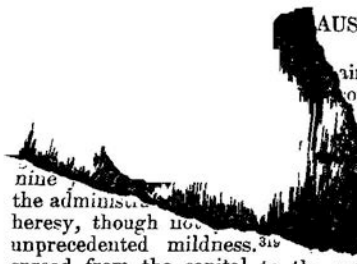
kingdom."

This was an ex part of the French governme owed showed that it was only the b g of a much larger design. Machault, so far from being discountenanced, was, the year after he had issued this edict, intrusted with the seals in addition to the controllership; for, as Lacretelle observes, the court "thought the time had now come to tax the property of the clergy." During the forty years which elapsed between this period and the beginning of the revolution, the same anti-ecclesiastical policy prevailed. Among the successors of Machault, the only three of much ability were Choiseul, Necker, and Turgot, all of whom were strenuous opponents of that spiritual body, which no minister would have assailed in the preceding generation. Not only these eminent statesmen, but even such inferior men as Calonne, Malesherbes, and Terray, looked on it as a stroke of policy to attack privileges which superstition had consecrated, and which the clergy had hitherto reserved, partly to extend their own influence, and partly to minister to those luxurious and profligate habits, which in the eighteenth century were a scandal to the ecclesiastical order.

While these measures were being adopted against the clergy, another important step was taken in precisely the same direction. Now it was that the government began to favour that great doctrine of religious liberty, the mere defence of which it had hitherto punished as a dangerous speculation. The connexion between the attacks on the clergy and the subsequent progress of toleration, may be illustrated, not only by the rapidity with which one event succeeded the other, but also by the fact, that both of them emanated from the same quarter. Machault, who was



ain, was also the first

novement quickly
spread from the capital to the remoter parts of the kingdom; and we are assured that, after the year 1762, the reaction was felt even in those provinces, which, from their backward condition, had always been most remarkable for religious bigotry. At the same time, as we shall presently see, a great schism arose in the church itself, which lessened the power of the clergy, by dividing them into two hostile parties. Of these factions, one made common cause with the state, still further aiding the overthrow of the ecclesiastical hierarchy. Indeed, the dissensions became so violent, that the last great blow dealt to spiritual ascendency by the government of Louis XVI. proceeded not from the hands of a layman, but from one of the leaders of the church; a man who, from his standing, would, under ordinary circumstances, have protected the interests which he now eagerly attacked. In 1787, only two years before the Revolution, Brienne, archbishop of Toulouse,[320] who was then minister, laid before the parliament of Paris a royal edict, by which the discouragement hitherto thrown upon heresy was suddenly removed. By this law, the Protestants were invested

318 On which account, he still further provoked the indignation of the Catholic clergy.

319 "The approach of the year 1760 witnessed a sensible relaxation of persecution. . . . The clergy perceived this with dismay; and, in their general assembly of 17[illegible], they addressed urgent remonstrances to the king against this remission of the laws." *Felice, Hist. of the Protest. of France*, p. 422.

320 Of whom Hume, several years before, had formed a very high opinion.

List of the Series—*continued*

Nekrassov. Who can be happy and free in Russia? A Poem. Trans. by JULIET SOSKICE. (213)

Palgrave. The Golden Treasury. With additional Poems, including FITZGERALD'S translation of Omar Khayyám. (133)

Peacock (W.). English Prose from Mandeville to Ruskin. (45)
Selected English Essays. (32)

Poe (Edgar Allan). Tales of Mystery and Imagination. (21)

Porter (Jane). The Scottish Chiefs. (161)

Prescott (W. H.). History of the Conquest of Mexico. Introduction by Mrs. ALEC-TWEEDIE. 2 vols. (197, 198)

Reid (Mayne). The Rifle Rangers. With 6 Illustrations. (166)
The Scalp Hunters. With 6 Illustrations by A. H. COLLINS. (167)

Reynolds (Sir Joshua). The Discourses, and the Letters to 'The Idler.' Introduction by AUSTIN DOBSON. (149)

Rossetti (Christina). Goblin Market, The Prince's Progress, and other Poems. (184)

Rossetti (D. G.). Poems and Translations, 1850-1870. (185)

Ruskin. *(Ruskin House Editions, by arrangement with Messrs. Allen and Unwin, Ltd.)*
'A Joy for Ever,' and The Two Paths. Illustrated. (147)
Sesame and Lilies, and The Ethics of the Dust. (145)
Time and Tide, and The Crown of Wild Olive. (146)
Unto this Last, and Munera Pulveris. (148)

Scott. Ivanhoe. (29)
Lives of the Novelists. Introduction by AUSTIN DOBSON. (94)
Poems. A Selection. (186)

Selected Speeches on British Foreign Policy (1738-1914). Edited by EDGAR R. JONES, M.P. (201)
